General Information

Academic Calendar 2021-2022

For the 2021-2022 academic calendar, please visit: <https://registrar.kaust.edu.sa/calendars>

University Information

Our vision at King Abdullah University of Science and Technology (KAUST) is to aspire to be a destination for scientific and technological education and research. By inspiring discoveries to address global challenges, we strive to serve as a beacon of knowledge that bridges people and cultures for the betterment of humanity.

The KAUST program guide provides information about academic programs and requirements for applicants, students, faculty, and staff at the University. Students are expected to follow the program requirements outlined in the program guide of the academic year they started their program. The senior academic leadership team consisting of the division deans, associate deans, and the dean of graduate affairs along with the Office of the Registrar are responsible for the academic policies in the program guide and reserve the right to make changes at any time on behalf of the University.

The program guide reference to “students” is general and the plural pronoun throughout the text is chosen for simplicity and ease of language, but has no further implications. This program guide expires 10 years from the published academic year.

This program guide was last updated as of December 2021.

The Office of the Registrar

The Office of the Registrar is the custodian of official student information and records. It is responsible for registration, course enrollment management, classroom assignment, final exam scheduling, grade processing, academic and administrative policy monitoring, information dissemination, maintaining student records, and providing certified documents, including transcripts and diplomas. The Office of the Registrar publishes the course schedule, available before registration for each semester/session. Information about registration procedures, time and location of courses, faculty, and

course prerequisites and requirements are provided to students prior to the beginning of the semester/session. The Office of the Registrar is responsible for supporting strategic enrollment by analyzing student progression and retention, graduation, and academic trends for long-term admissions and operational planning for the University.

The Registrar’s Office is responsible for ensuring all students meet the minimum overarching university degree requirements to graduate. Requests to waive university degree requirements are reviewed by the Provost’s Office and must be endorsed by the division. In addition, the Registrar’s Office oversees academic policies that apply to all students. Out of policy exceptions are reviewed by the Registrar’s Office in conjunction with the relevant division.

Contact Information

Office of the Registrar
Building 9, Level 3
4700 King Abdullah University of Science and Technology
Thuwal 23955-6900 Saudi Arabia
Phone: +966 12 808 0505
Email: registrarhelpdesk@kaust.edu.sa
Website: <https://academicaffairs.kaust.edu.sa/registrar/>

Office of the Registrar Vision

The Registrar’s Office at KAUST aspires to provide efficient, customer-oriented, and adaptable service through effective use of technology to ensure the future success of KAUST.

Divisions and Programs

There are three academic divisions, each headed by a division dean. Divisions are responsible for overseeing programs within their area, including implementing any division specific requirements (e.g. qualifying examinations) and ensuring all program requirements meet the minimum university requirements. Within each division are programs that are headed by a program chair reporting to the division. Programs are responsible for teaching and individual program requirements. Requests to waive division or program requirements are reviewed by the relevant division and/or program.

Academic Advisors

Academic Advisors

All students have an academic advisor responsible for reviewing and approving study plans and course registration. Students should frequently meet with their academic advisor to make sure that they are making satisfactory progress toward their degrees.

Student-Advisor Relationship

Students and their academic advisors share the responsibility in creating a professional academic student-advisor relationship. Mutual respect, honesty, and effective communication will help cultivate a successful relationship. Early in the student-advisor relationship, students and academic advisors should discuss expectations of the relationship, and both should consider not only academic, research, and professional goals but also issues pertaining to academic and research circumstances, including schedules, work-life balance, and personal and family responsibilities. Both students and academic advisors are responsible for communicating as necessary.

If students are facing issues during their time at KAUST, students should be able to raise these issues in confidence with their academic advisor. Advisors should support their students and provide advice and guidance as appropriate. Students can also approach their Graduate Program Coordinators (GPCs) at any time. It is recommended that students maintain regular contact with their GPCs throughout their time at KAUST. GPCs can give advice and, where necessary, refer students to other sources of help, or raise matters with their associate dean or dean.

Graduate Program Coordinators

Graduate program coordinators (GPCs) are administrative division/program representatives who work with students, faculty, and staff to support students and programs. These include graduate program student advisors, graduate program advisors, and graduate program coordinators. The term GPC is used as a placeholder in the program guide as divisions assign different titles to these positions.

Graduate Affairs

Graduate Affairs includes the Admissions Office, Graduate Development and Services, Graduate Operations, and Alumni Services. The Dean of Graduate Affairs is the head of Graduate Affairs.

For detailed information on academic services provided by Graduate Affairs, including housing, recreation, travel, and alumni please see the Student Handbook.

Ombuds for Student Matters

The Office of the Ombuds for Student Matters at KAUST has been established by the president to provide confidential, impartial and informal advice about and dispute resolution services for student matters. The office functions to assist visitors in reaching mutually acceptable agreements in order to find fair and equitable resolutions to concerns that arise at the University.

Services are available to faculty, staff, and visiting students, postdocs and others at KAUST who require assistance with student matters.

The ombuds acts independently from the academic divisions. To book an appointment, please email ombuds@kaust.edu.sa.

For more information, see Charter of the Office of the Ombuds for Student Matters.

English Language and Communication Program

The English Language and Communication Program (ELCP) provides courses and workshops to support graduate students with the effective communication of their research.

Instructors in the ELCP teach the following mandatory courses:

Intensive English Language Program (IELP)

The IELP consists of two levels (1 and 2, according to student assessments), each consisting of 25 hours of weekly instruction. This is a full-time course and is designed for students who require the development of pre-requisite foundational English language. Classes focus on all aspects of English development, including reading, writing, speaking, and listening.

English for Academic Purposes (EAP)

The EAP program is designed for all students with test scores in the high intermediate range, but who require advanced-level English language skills in order to succeed within a graduate education program. This program requires 10 hours of instruction per week. All aspects of English development will be covered, with an emphasis on

improving students' ability to effectively communicate their research in written and spoken form. Modules covered include Scientific Research Writing and Presentation Skills.

Other Services

As well as the mandatory courses, the ELCP instructors run single-session workshops which include instruction on topics such as How to Write a Research Proposal, and Scientific Posters: Prepare and Present.

In addition to group courses and workshops, the ELCP instructors provide one-to-one sessions to support students with writing and presentation skills, and are responsible for the administration of the English language test for the Admissions office. Please contact the team for further information on the support you can receive: elcp@kaust.edu.sa.

Degrees and Programs

KAUST offers the following degree programs exclusively as full-time degree programs.

- Master of Science (M.Sc.) with thesis
- Master of Science (M.Sc.) non-thesis
- Doctor of Philosophy (Ph.D.)

KAUST has three academic divisions offering the following degree programs:

Division of Biological and Environmental Science and Engineering (BESE)

- Bioengineering (BioE)
- Bioscience (B)
- Environmental Science and Engineering (EnSE)
- Marine Science (MarS)
- Plant Science (PS)

Division of Computer, Electrical and Mathematical Science and Engineering (CEMSE)

- Applied Mathematics and Computational Science (AMCS)
- Computer Science (CS)
- Electrical and Computer Engineering (ECE)

- Statistics (STAT)

Division of Physical Science and Engineering (PSE)

- Applied Physics (AP)
- Chemical Engineering (CE)
- Chemical Science (ChemS)
- Earth Science and Engineering (ErSE)
- Energy Resources and Petroleum Engineering (ERPE)
- Material Science and Engineering (MSE)
- Mechanical Engineering (ME)

Academic Policies

Academic Semesters and Sessions

KAUST offers two semesters and two sessions. The two semesters include the fall semester, 15 weeks from August/September to December, and the spring semester, 15 weeks from January/February to May/June.

The two sessions include the summer session, eight weeks from June to August, and the winter session, two weeks from January to February.

Each regularly scheduled course has a credit value of 3 credits, for 3 contact hours per week in the fall and spring semesters, and 6 contact hours per week in the summer session.

Regular classes are scheduled during the fall and spring semesters and the summer session. The winter session is reserved for the Winter Enrichment Program (WEP).

Registration

Each regularly scheduled course has a credit value of 3 credits, for 3 contact hours per week in the fall and spring semesters, and 6 contact hours per week in the summer session. Research credits vary from 3 credits to 12 credits per fall and spring semester and 3 credits to 6 credits in the summer session. Graduate seminars are 0 credit courses, and are required as per program requirements.

Students are expected to maintain full-time registration in every semester and summer session until they have completed their degree requirements. Fall and spring semesters require 12 credits of registration and summer

session requires 6 credits of registration to maintain full-time status. Applications for permission to register in more or less than full-time status are permitted only under exceptional circumstances and subject to approval by the dean. Students should contact their GPC for further information. In case of late arrival or approved leave of absence, registration credits are prorated.

Where a student is approved for less than 12 credits of registration (other than as a result of late arrival or an approved leave of absence) for either the fall or spring semester, or 6 credits of registration in the summer, there will be a stipend reduction of 25%.

Students are responsible for ensuring their registration is accurate for each semester/session of registration and for determining the requirements of their program. Students are strongly encouraged to read the relevant program requirements as listed in the program guide. Further information about program requirements is available from the appropriate GPC.

Students are expected to prepare for and attend all scheduled classes during the semester/session. Students are expected to treat one another respectfully, and to offer constructive criticism in course discussions about their classmates' work. Participation in class is strongly encouraged. Punctuality is required.

Winter Enrichment Program (WEP)

The Winter Enrichment Program (WEP) is a graduation requirement for all students (M.Sc. and Ph.D.). All students must satisfactorily complete the WEP requirement for credit at least once during their studies at KAUST.

WEP is a two-week program entirely designed and produced by KAUST and takes place during an interlude in the academic semester in January when courses are not offered. WEP includes keynote lecture series, field trips, exhibitions, science fairs, opening nights, and final galas. The program hosts KAUST speakers, eminent international guest speakers, Nobel Laureates, entrepreneurs, academics, as well as distinguished local and regional leaders and decision-makers.

For more information about WEP visit the Enrichment website.

Transfer Credit

Master's students may apply for transfer credits from another university upon approval of the academic advisor, program chair, and the Office of the Registrar. Courses

already used for another degree cannot be used as transfer credit. Once transfer credit is approved, the transferred course(s) will be noted on the official transcript.

The following guidelines apply:

- Up to three graduate level courses not to exceed 9 credits may be approved
- The course grade for any course to be transferred must be a B (or equivalent) or above
- Courses transferred must have been taken within three years prior to admission to KAUST
- Students must submit a completed transfer credit form and include a course syllabus for every course
- Students must submit an official transcript no more than three months old in English or accompanied by a certified English translation

Doctoral students transferring from other Ph.D. programs may receive dissertation research and coursework credits on a case-by-case basis.

Grading

The KAUST grading system is a 4.0 scale utilizing letter grades and these are the only grades that will be assigned:

Passing grades

A	=	4.00
A-	=	3.67
B+	=	3.33
B	=	3.00
B-	=	2.67

Failing grades

C+	=	2.33
C	=	2.00
C-	=	1.67
D+	=	1.33
D	=	1.00
D-	=	0.67
F	=	0.00

Grades with no GPA

I	=	Incomplete
IP	=	In progress
W	=	Withdrew
S	=	Satisfactory (pass)
U	=	Unsatisfactory (fail)
WF	=	Withdrew-failed

Individual courses require a minimum of a B- for course credit. Final grades are due 36 hours after end of a course or final exam. Instructors are required to submit final grades through Blackboard.

Incomplete Grades

Students who complete the majority of the requirements for a course but are unable to finish the course may receive an incomplete (I) grade. A grade of incomplete will be assigned only with the consent of instructors after instructors and students have agreed on the academic work that needs to be completed and the date it is due. When the requirements for the course are completed, instructors will submit a grade that will replace the incomplete grade. Incomplete grades not completed by the end of the second week of the following semester will be changed to failing grades.

Incomplete grades are granted to individual students on a case-by-case basis. Incomplete grades should not be used as a mechanism to extend the course past the end of the semester.

Graduating Student Grades

Note that any incomplete grades (as well as fail grades) will mean students will not graduate or receive a diploma during the commencement ceremony.

In Progress Grades

Master's thesis research (297) and doctoral dissertation research (397) are graded as in progress (IP) for each semester/session. Students who complete their research will receive a satisfactory (S) grade in the last semester/session at the end of their program.

Grade Appeal

Students have the right to appeal their final grade in a course, but must do so by the end of the third week after the start of the following semester. Students should first discuss the issue informally with their instructor. If the matter cannot be resolved this way, students may initiate an appeal to their academic advisor outlining the reasons in writing. Copies of the appeal will be forwarded to the dean. The dean will assign a faculty member in the same subject matter to review the grade. The final decision is made by the dean. If a change of the final grade is approved, the new grade will be recorded and the disputed grade will be removed.

Note: grades may only be appealed when students believe there has been an error in evaluating their work. Grade appeals are not to be used as a mechanism for attempting to improve poor grades.

Repeating Failed Courses

A course in which the final grade is C+ or lower may be repeated. If the second grade is higher, the original grade may be excluded from the GPA calculation with the prior approval of the dean. The original grade will remain on the official transcript. Repeating failed courses is normally restricted to one course only.

If a course is approved to be repeated, any academic sanctions will still apply until the course has been successfully repeated.

Course Changes (Add or Drop)

A course may be added through the portal during the first two weeks of the semester. Students may add courses after the first two weeks with the permission of the academic advisor and instructor. Instructors have the right to refuse admission to students if the instructor feels that students will not have the time to sufficiently master the material due to adding the course late. Course change forms are also used for students requesting permission to waive prerequisites for a course or requesting dean approval to register above the maximum number of credits per semester/session.

A course may be dropped without penalty before the last day to drop a class without a W grade as per the Academic Calendar (p. 5), but students must ensure they maintain full-time registration for the semester/session. Between the last day to drop without a W and the last day to drop with a W, students can drop a course or drop below 12 credits with the approval of the academic advisor and the dean. After the last day to drop with a W, courses may be dropped only under exceptional circumstances and the final grade will be updated to withdrew/failed (WF). Students should note that dropping courses may delay graduation and this will be taken into consideration by the program when reviewing course drop requests.

Where a student is approved for less than 12 credits of registration (other than as a result of late arrival or an approved leave of absence) for either the fall or spring semester, or less than 6 credits of registration in the summer, there will be a stipend reduction of 25%.

Change of Program or Advisor

Students who would like to change advisors should consult with their GPC prior to requesting a change. Once confirmed, students will need to complete the change of advisor form which requires approval from both the previous advisor and the new advisor. Students who are changing degree programs may be required to change their advisors to an affiliated advisor in the new program of study. Approval from the program chair is required for changes within the division, approval from the dean is required for changes to a new division. Advisor and/or program changes should be submitted by the last day to drop with a W to be reflected in the current academic semester.

Co-advisor requests must be affiliated with KAUST either as a regular faculty member or with adjunct status.

Leaves of Absence

Students are expected to maintain continual enrollment at the University until completion of their graduation requirements. Students may take vacation days during each academic year, as defined by the Academic Calendar (p. 5) and the Student Handbook. Unused vacation days do not carry over to the following year. Master's thesis and doctoral students may be granted additional vacation leave, which must be discussed with academic advisors at least four weeks prior to the proposed vacation (no formal leave of absence request is required for vacation leave).

Under personal or exceptional circumstances, students may apply for a leave of absence with the understanding that the student will return to the University at the end of the leave period. There are five types of voluntary leave and any leave of absence requests are approved by the dean. Students who plan to apply for a leave of absence should consult with their GPC prior to requesting a leave of absence. Students should complete at least one semester or session of study before applying for a leave of absence.

General Leave of Absence

Students are allowed only one general leave of absence which may be approved for up to one year. Applications for a leave of absence must be received by the Office of the Registrar prior to the leave date, or students may receive a failing grade for courses enrolled for that semester. This may also affect benefit entitlements. The course change policy and add/drop deadlines will be applied, for information on deadlines, please see Course Changes (Add or Drop) (p. 10).

Students on a general leave of absence do not receive a stipend and must vacate housing if the absence is greater than 90 days. Upon approved return to the University, housing will be reallocated according to availability. At least two weeks prior to return to the University, students must confirm their return date with Graduate Operations, GPC and academic advisor. Students who do not return to the University by the approved return date will be dismissed for abandonment of program.

Medical Leave

Short term periods of medical leave (defined as five or fewer days) do not require supporting documentation. Longer periods of medical leave require supporting documentation from a treating health or medical health professional.

Should students suffer from an illness or disability that

requires frequent or lengthy absences that impact their ability to complete academic requirements, consideration will be given to an extended leave of absence to include the current semester, but no longer than 12 months. Should additional extended medical leave be required, a detailed medical report from the KAUST Medical Services must also be supplied with the application.

Approval of medical leave for 30 days or less will not generally result in a reduction in a student stipend. For longer periods of leave (or multiple episodes of leave with the same underlying condition) stipends will not be payable after the first 30 days.

If medical leave is not approved students may consider applying for a general leave of absence if the circumstances warrant the application.

Maternity Leave

Enrolled female students may be eligible for six week maternity leave with evidence of an expected delivery date. Commencement of maternity leave should begin no earlier than two weeks prior to the birth of the child, however, exceptions will be considered on a case-by-case basis. While on maternity leave, students will receive full stipend and will retain benefits, including housing, medical insurance, and school privileges for eligible dependents. Students seeking additional leave (such as the remainder of a semester), may apply for an additional general leave of absence for this period. Following an approved maternity leave, students must confirm their return date to Graduate Operations, GPC and academic advisor.

Students are not eligible for maternity leave and its associated benefits in their first semester of study. Students who have given birth prior to the onset of the academic year are permitted to begin studies if no more than the first two weeks of the semester are missed. Students who are pregnant upon acceptance to the University but have not yet enrolled may apply for a deferral of maximum one year due to maternity leave. If the deferral application is approved, no stipend would be paid during the deferral period. Absences of more than one year requires students to reapply for admission.

Bereavement Leave

The University recognizes that students may be unable to attend to their academic studies due to the death of a child, spouse, or parent. In these situations and supported by appropriate documentation, a short bereavement leave with no effect on student status or stipend may be approved. Bereavement leave is seven days, exclusive of travel days.

Students requesting additional time may also apply for compassionate leave. Upon return to the University, students must provide Graduate Affairs Operations with a copy of an official death certificate or similar document.

Compassionate Leave

The University recognizes that students may encounter extenuating personal circumstances that make them unable to attend to their academic studies. In certain situations and supported by appropriate documentation, compassionate leave may be approved.

Involuntary Leave of Absence

The Dean of Graduate Affairs may place a student on an involuntary leave of absence at any time if such an action is deemed reasonably necessary for the protection of the University community or for the personal safety or welfare of the student involved.

Traveling Scholar

Traveling scholar opportunities are used for students studying at external institutions or organizations offering course work or facilities related to KAUST research interests. Traveling scholar is generally limited to one semester/session.

To be eligible as a traveling scholar, students must be in good academic standing and must have successfully completed at least one semester/session at KAUST. Division specific requirements may also apply. Applications for traveling scholar may be denied if it is determined that degree completion will be delayed by traveling. Traveling scholars are also expected to maintain full-time KAUST registration and satisfactory progress toward their degree while completing the requirements of their approved traveling scholar arrangement.

Students applying as a traveling scholar need to complete the application for traveling scholar with a full description of the course or research to be completed, why it is necessary to work off campus, and the expected outcomes. The KAUST academic advisor must provide support for the need to work off campus, explain how work will be evaluated, and approve the application. The external institution must confirm attendance and students must provide periodic progress reports to their KAUST academic advisors. Final approval is made by the dean. Students are expected to apply for traveling scholar and obtain approval 30 days before they leave the University.

Students and advisors will be responsible for funding for

travel, housing, and any miscellaneous expenses. For information on travel and possible reimbursements, see the Academic Travel Guidelines and Procedure at policy.kaust.edu.sa. If the travel is more than 90 days, students will be required to surrender housing and must contact Graduate Affairs Operations at gradopsexiting@kaust.edu.sa. Upon returning to KAUST, students must contact Graduate Affairs Operations at gradopsonboarding@kaust.edu.sa 30 days before their approved entry so new housing can be assigned. As with student leave, students are responsible for ensuring their passport, iqama, or relevant visas will not expire during any period they may be out of the country.

For students interested in work experience opportunities, information on internships can be obtained through GPCs and/or graduate affairs. More information is available under Internships (p. 12).

Internships

Internships are generally industry experiences that are not related to thesis, dissertation, or other research at KAUST. M.Sc. students generally register for summer internships for 6 credit hours (XX 295). Ph.D. students are able to apply for internships at any time throughout their program. An internship that qualifies for earned credit hours, or is intended to fulfill any other academic requirement must be approved prior to the start of the internship by the designated academic advisor, the dean, the dean of graduate affairs, and the Office of the Registrar.

Students applying for internship opportunities must have a minimum grade point average of 3.0. If students fail to maintain a cumulative GPA of 3.0 through the semester/session preceding an arranged internship, students must obtain new approval from their academic advisor in order to proceed with the internship.

For information about credit, funding, and insurance, please contact the Office of Professional Development in Graduate Affairs at Professional.Development@kaust.edu.sa.

Time Limits and Extensions

M.Sc. thesis students and students completing M.Sc. thesis requirements during their Ph.D., who request an extension past four 15-week semesters require justification and support for an extension. Students requesting a second extension require approval from the dean of graduate affairs. Extension requests may only be requested for a

maximum of one semester or summer session at a time.

Students not granted an extension but who have met the requirements of a master's without thesis may be able to graduate from the non-thesis option. M.Sc. non-thesis students are expected to complete in three semesters and one summer session.

The extension form must be completed and include the following:

- A statement on the remaining scope of work (including thesis writing and defense) and whether it is achievable by the end of the following semester
- Approval from the dean

Students entering the Ph.D. program with a master's degree should finish their Ph.D. in two and a half to four years. Students entering the Ph.D. program with a bachelor's degree should finish the Ph.D. in three and a half to six years. Ph.D. students have a maximum of seven years beyond the master's degree to complete all degree requirements including the final defense and any conditions required by the defense committee.

Academic Standing

Academic standing is based on a cumulative performance assessment of the grade point average (GPA) and U grades including credit, non-credit, and ESL courses. Students who fail the qualifying examination(s), the proposal defense, and/or the thesis/dissertation final defense may be subject to academic sanction at the recommendation of the program. The division at any time may recommend to the Office of the Registrar to place students on academic sanction based on unsatisfactory research performance. Division recommendations for academic probation or dismissal must be approved by the dean.

Students are assessed each semester/session as per the criteria below:

GPA Cumulative Assessment

3.00 – 4.00 – Good Standing
2.33 – 2.99 – Academic Probation
Below 2.33 – Academic Dismissal

U Grade Cumulative Assessment

*includes 100 level courses, ESL, graduate seminars, directed research, and lab rotations.

Three U grades – Academic Dismissal

Research Assessment

Satisfactory performance – Good Standing
 Unsatisfactory performance as determined by the division
 – Academic Sanction

Appeal Process for Dismissal

Students who are eligible to appeal must submit a written explanation why the dismissal should be rescinded along with any supporting documentation. The Academic Performance Committee will hear the appeal and make a decision to grant or deny the appeal based on the appeal and documentation, past performance and the likelihood that students are capable of successfully completing their academic program. If the appeal is denied, students will be required to leave the University. The decision of the committee is final and no additional appeals are permitted. Once students have been notified that the appeal has been unsuccessful, the appeal process is at an end and an exit advisor will be in contact with them to explain the exiting process. Students who are dismissed will have up to one week after being notified to complete the exit process.

Completing In Absentia

In absentia status applies to students who are completing final degree requirements after exiting from the University and permanently leaving the campus. Students whose only remaining academic requirements can be completed off campus may apply for in absentia status. Applications require the approval of the academic advisor and the dean, and are generally approved for a maximum of one year.

In absentia status students will cease to receive stipend and award payments and any other on campus benefits.

Graduation

The University has two graduation cycles: one culminating with commencement and one with the spring luncheon. Students will officially graduate during the graduation cycle in which they complete all the requirements of their degree program. This includes M.Sc./Ph.D. students graduating from their master's degree.

Graduation is the completion of all degree requirements as recorded on the official transcript. An application to graduate is required to finalize the receipt of a degree (this is not an application to participate in the commencement ceremony). Diplomas are awarded to students on or after the official graduation date.

Students must submit an application to graduate by the last

day to add/drop courses. Failure to meet published deadlines will delay graduation one semester and may affect participation in the commencement ceremony.

Commencement

Participation in the commencement ceremony is not limited to those students who have completed their degree requirements in the fall semester. Students meeting any of the categories below may participate in commencement.

M.Sc. or Ph.D. degree candidates who have completed all degree requirements and did not participate in the previous commencement may participate, but cannot participate in any further commencement ceremonies. Students can only take part on one commencement ceremony for each degree.

M.Sc. thesis candidates who have completed all of the course work for the master's degree, but not the thesis, may participate, but will not graduate until the thesis is completed.

Ph.D. candidates who have completed the defense examination with either a "pass" or "conditional pass" may participate, and will officially graduate during the cycle in which they complete their remaining degree requirements.

University Degree Requirements

University degree requirements apply to all students enrolled in a degree program and all students must meet the minimum university degree requirements to graduate. Program-specific requirements are in addition to university degree requirements and are managed individually by programs.

Master of Science University Degree Requirements

It is the responsibility of students to plan their graduate program in consultation with their program and advisors. Students are expected to follow the program requirements outlined in the program guide of the academic year they started their program. Students should be aware that most core courses are offered only once per year.

The master's degree (M.Sc.) is awarded upon successful completion of a minimum of 36 credit hours. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit. Students are expected to complete the M.Sc. degree in three semesters and one summer session.

The M.Sc. degree has the following components:

- Core courses
- Elective courses
- Research/capstone experience
- Graduate seminars
- Winter Enrichment Program (WEP)

Divisions and/or programs may have additional program requirements. Please see detailed program information.

M.Sc. Thesis Option

To successfully complete a master's degree with thesis, all master's thesis students must complete the thesis application and the thesis defense. Individual programs may have additional program requirements that must be met to graduate, please see division/program requirements for further details.

M.Sc. Thesis Application

Students pursuing the thesis option should have at least a 3.2 cumulative GPA. All thesis applications require approval of the program chair. Applications for thesis are still required for programs that only offer an M.Sc. thesis.

Students will be expected to complete their thesis by the end of the fourth semester (not including summer session). Students who require additional time to complete their thesis will be required to apply for an extension (see Time Limits and Extensions (p. 12)). The selected academic advisor must be a full-time program-affiliated assistant, associate or full professor at KAUST. This advisor can only become project affiliated for the specific thesis project with program chair approval.

The application for thesis should include a well-constructed thesis proposal endorsed by the academic advisor, including a time line for completion not to exceed four semesters. The program of study should be structured to allow students to change to a master's without thesis and finish the degree by the end of the fourth semester. Thesis applications should be submitted by the last day to drop with a W to be reflected in the current academic semester.

Students who withdraw from the thesis option will be required to complete a thesis withdrawal form. Students who withdraw from the thesis option after the last day to drop will receive a W on their official record.

M.Sc. Thesis Defense Committee

The thesis defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than four members. At least two of the required members must be affiliated with students program of study. Please see individual programs for thesis defense committee requirements.

M.Sc. Thesis Defense Requirements

A thesis oral defense is required, although a public presentation and all other details are left to the discretion of the thesis committee. Students are responsible for scheduling the thesis defense date with their thesis committee. All committee members are required to attend the defense.

A written thesis is required. It is advisable that students submit their final thesis to the thesis committee members no later than two weeks prior to the defense date. Students are required to comply with the University formatting guidelines provided by the Office of the Registrar.

There are four possible outcomes for this thesis defense:

- Pass
- Pass with conditions
- Retake
- Fail without retake

A pass is achieved when the committee agrees with no more than one dissenting vote. In the instance of a pass with conditions, the entire committee must agree on the required conditions and if they cannot, the dean decides. The deadline to complete the conditions is one month after the defense date, unless the committee unanimously agrees to change it. If the conditions will take more than one month, or more than one member casts a negative vote, one retake of the defense is permitted. The deadline to complete the retake is decided by the defense committee with a maximum of six months after the defense date, unless the committee unanimously agrees to reduce it. In the instance of a fail without retake, the decision of the committee must be unanimous. Students who fail without retake or who fail the retake will be dismissed from the University.

The final signed approval form must be submitted to the Office of the Registrar by the deadline for M.Sc. thesis library receipt forms as indicated on the Academic Calendar (p. 5). Failure to submit by the deadline will result in students being graduated the following semester.

M.Sc. Non-Thesis Option

Students wishing to pursue the non-thesis option must complete a minimum of 6 credits of research. Some programs do not offer non-thesis programs, please see individual program requirements for more information.

Students must complete the remaining credits through one or a combination of the options listed below:

- Broadening experience courses: courses that broaden the master's experience
- Internship: research-based internship (295)
- Ph.D. courses: courses numbered at the 300 level

M.Sc. Graduation Requirements

To successfully graduate with a master's degree from KAUST all students must meet the minimum University graduation requirements and be approved by the Office of the Registrar and division dean. Individual programs may have additional requirements, which must be met to graduate, please see division/program requirements for further details. Programs cannot require less than the minimum degree requirements or waive university degree requirements. If there is any perceived conflict between program and university degree requirements, the university degree requirements will prevail.

The M.Sc. degree has the following minimum graduation requirements:

- Minimum 36 overall credits
- Minimum 12 research/capstone credits
- Minimum two graduate seminars
- Cumulative GPA of 3.0 or above
- Successful completion of one Winter Enrichment Program (WEP)

For M.Sc. thesis students, the final thesis must be format reviewed and archived in the library by the semester deadlines published in the academic calendar.

Doctor of Philosophy University Degree Requirements

The Doctor of Philosophy (Ph.D.) degree is designed to prepare students for research careers in academia and industry. Students are expected to follow the program requirements outlined in the program guide of the academic year they started their program. Students should

be aware that most core courses are offered only once per year.

There is a minimum residency requirement at KAUST of three and a half years for students entering with a bachelor's degree and two and a half years for students entering with a master's degree. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit.

Once admitted, Ph.D. students are required to designate an academic advisor. The selected academic advisor must be a full-time, program-affiliated professor at KAUST. Students may also select an advisor from another program at KAUST. This advisor can only become project affiliated for the specific dissertation project with program-level approval. Project affiliation approval must be completed prior to commencing research.

The Ph.D. degree includes the following components:

- Designate an academic advisor
- Coursework (as listed in the program-specific guidelines)
- Advancement to candidacy
 - Pass the qualifying examination (if applicable)
 - Pass the dissertation proposal defense
- Successful defense and submission of a doctoral dissertation

View a list of faculty and their affiliations here.

Ph.D. Course Requirements

The required coursework varies for students entering the Ph.D. program with a bachelor's degree or a master's degree. Students holding a bachelor's degree must complete all M.Sc. program core/mandatory courses and elective courses outlined in the master's degree section and are also required to complete the Ph.D. courses below. Students entering with a bachelor's degree will qualify to earn a master's degree by satisfying the master's degree requirements.

Students entering the Ph.D. degree with a relevant master's degree must complete the requirements below, though additional courses may be required by the program (see program-specific guidelines) or academic advisor.

- At least two 300-level courses
- Completion of one Winter Enrichment Program

(WEP) – students who completed WEP while earning the M.Sc. are not required to enroll in a full WEP for a second time during the Ph.D.

- Graduate seminar(s) – see program requirements for details

Ph.D. Candidacy Requirements

Students are designated as Ph.D. students when they enter the program. Students become Ph.D. candidates by qualifying for and advancing to candidacy by:

- Successfully passing the required Ph.D. coursework
- Successfully passing the qualifying exam (if applicable – see program requirements)
- Writing and orally defending the research proposal

Students must advance to candidacy within one to three years of their doctoral program. See individual program requirements for more information on candidacy timelines and requirements.

Ph.D. Qualifying Examination

The purpose of the qualifying examination is to test students' knowledge of the subject matter within their field of study. Each program is responsible for setting the qualifying examination requirements. For more information, please see program requirements.

Ph.D. Dissertation Proposal Defense Committee

The Ph.D. dissertation proposal defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than six members. The chair, plus one additional faculty member must be affiliated with the student's program. Please see individual programs for defense committee requirements.

Ph.D. Dissertation Proposal Defense

The purpose of the dissertation proposal defense is to demonstrate that students have the ability and are adequately prepared to undertake Ph.D. level research in the proposed area. This preparation includes necessary knowledge of the chosen subject, a review of the literature and preparatory theory or experiment as applicable. The proposal defense committee must be approved by the dean prior to the proposal defense.

The dissertation proposal defense is part of the candidacy milestone that must be completed to become a Ph.D. candidate. Ph.D. students are required to complete the dissertation proposal defense within one to three years of

doctoral studies, see individual program requirements for more information. The dissertation proposal defense includes two aspects: a written research proposal and an oral research proposal defense.

There are four possible outcomes for the dissertation proposal defense:

- Pass
- Pass with conditions
- Retake
- Fail without retake

A pass is achieved when the committee agrees with no more than one dissenting vote. In the instance of a pass with conditions, the entire committee must agree on the required conditions and if they cannot, the dean decides. The deadline to complete the conditions is three months after the defense date, unless the committee unanimously agrees to change it. In the instance of a fail without retake, the decision of the committee must be unanimous. Students who fail without retake or who fail the retake will be dismissed from the University.

Students who successfully pass the dissertation proposal defense are deemed Ph.D. candidates.

Ph.D. Defense

To graduate, Ph.D. candidates must form a Ph.D. dissertation defense committee and successfully defend a Ph.D. dissertation.

Ph.D. Dissertation Defense Committee

The Ph.D. dissertation defense committee, which must be approved by the dean, must consist of at least four members and typically includes no more than six members. At least three of the required members must be KAUST faculty and one must be an external examiner who is external to KAUST. The chair, plus one additional faculty member must be affiliated with the student's program. The external examiner is not required to attend the defense, but must write a report on the dissertation and may attend the dissertation defense at the discretion of the program. Please see individual programs for defense committee requirements.

Ph.D. Dissertation Defense

The Ph.D. degree requires the passing of the defense and acceptance of the dissertation. The final defense is a public presentation that consists of an oral defense followed by questions and may last a maximum of three hours. All

committee members are required to attend the defense.

Students must determine the defense date with agreement of all the members of the dissertation committee, meet deadlines for submitting graduation forms and inform the committee of their progress. It is the responsibility of students to submit the required documents to their GPC by the second week of the semester/session they intend to defend. It is also expected that students submit their written dissertation to the committee at least two months prior to the defense date in order to receive feedback.

The written dissertation is required to comply with the University formatting guidelines.

There are four possible outcomes for this dissertation final defense:

- Pass
- Pass with conditions
- Retake
- Fail without retake

A pass is achieved when the committee agrees with no more than one dissenting vote. In the instance of a pass with conditions, the entire committee must agree on the required conditions, and if they cannot, the dean decides. The deadline to complete the conditions is three months after the defense date, unless the committee unanimously agrees to reduce it. If the conditions will take three months or more, or more than one member casts a negative vote, one retake of the defense is permitted. The deadline to complete the retake is as decided by the defense committee with a maximum of six months after the defense date, unless the committee unanimously agrees to change it. Students who fail without retake or who fail the retake will be dismissed from the University.

Evaluation of the Ph.D. dissertation defense is recorded by submitting the result of Ph.D. dissertation defense form to the Office of the Registrar by the deadline in the Academic Calendar (p. 5).

Ph.D. Graduation Requirements

To successfully graduate with a Ph.D. degree from KAUST all students must meet the minimum University graduation requirements and be approved by the Office of the Registrar and the division dean. Individual programs may have additional requirements, which must be met to graduate (see division/program requirements for further details). Programs cannot require less than the minimum degree requirements or waive university degree

requirements. If there is any perceived conflict between program and university degree requirements, the university degree requirements will prevail.

The Ph.D. degree has the following minimum graduation requirements:

- Minimum 6 credits at the 300 level
- Minimum residency requirement of two and half years for Ph.D. only, and three and a half years for M.Sc./Ph.D.
- Cumulative grade point average (GPA) of 3.0 or above
- Completion of one Winter Enrichment Program (WEP) (can be taken during the master's degree)
- Successful defense and approval of doctoral dissertation
- The final Ph.D. dissertation must be format reviewed and archived in the library by the semester deadlines published in the academic calendar

Withdrawal from the University

Students are strongly advised to discuss a withdrawal with both their GPC and academic advisor before submitting a withdrawal form. Students who withdraw before the last day to drop classes without a W for the semester/session will have their courses removed from the transcript. Students who withdraw by the last day to drop a class with a W grade for the semester/session will receive a W for all their courses. Students are not permitted to withdraw after the last day to drop with a W grade unless there are exceptional circumstances and the dean has granted permission. To withdraw in good standing from KAUST, all withdrawals must be approved by the academic advisor, division dean, and dean of graduate affairs. In addition, students must successfully meet all departure clearance requests through Graduate Operations. For more information, please see the Student Handbook.

Students who are M.Sc./Ph.D. and choose to withdraw before completion of the Ph.D. will also need to complete a withdrawal form. Failure to submit a withdrawal form will result in students being dismissed for abandonment of program. To return to KAUST after a withdrawal, students will be required to reapply for admission and any courses taken previously at KAUST will be evaluated by the program on a case by case basis.

Once withdrawals are approved, students will have one

week to access their KAUST accounts and portal before access is removed.

Dismissal for Abandonment of Program

Students who do not enroll for classes in a given semester by the last day to add courses (fall, spring, summer), without permission to withdraw or take a leave of absence, will be dismissed for abandonment of program. To return to KAUST after a dismissal, students will be required to reapply for admission.

Academic Integrity

As a member of the KAUST campus community, students are expected to demonstrate integrity in all academic endeavors and will be evaluated on their own merits. Be proud of your academic accomplishments and help to maintain and promote academic integrity at KAUST.

Student Information Release and Access

Students may access education records, with the exception of records that students have waived their right to access, such as letters of recommendation. A written request to access specific records is required. This request is available from the Office of the Registrar. Review of records should be done in person. However, if it is not possible for students to review the records in person, copies can be provided (mailed). Any documents submitted to the University are the property of the University. The University may charge a fee for copying and mailing these records.

Students may grant access to any information that they can access, based on a signed and dated release form specifying specifically what information is to be released. Release forms will be valid for one year and maintained in students' academic folder. Release forms are available from the Office of the Registrar.

Student education records or information may be released without the permission of students to University officials, as well as outside agencies acting on behalf of the University, accrediting agencies, institutions of higher education in which students are enrolled or seek to enroll, or institutions from which students receive financial aid.

For more information, see Student Information Release and Access Policy.

Falsification of Records by Students

All instances of alleged falsification of University records (admission, registration, records, placement, etc.) will be reported to the Office of the Registrar. The Registrar will review the evidence and notify students of the alleged infraction. Students will be given an opportunity to reply, in writing, to the charges. All findings will be referred to Graduate Affairs for review according to the provisions of the Student Code of Conduct. If it is determined that an infraction was committed, the University will impose an appropriate penalty, up to and including dismissal from the University. Entering the University using falsified or misleading documents or intentionally omitting documents may lead to dismissal or degree revocation. The University also reserves the right to initiate legal proceedings against students.

General Admissions

For admissions related questions please see Applying to KAUST or contact admissions@kaust.edu.sa.

There are three available entry points for all applicants: fall semester, spring semester, and summer session. (For more information, see Academic Semesters (p. 7)).

Students are strongly encouraged to apply early in the admission cycle to receive an earlier decision and have enough time for visa processing (international students).

For students requesting transfer credit to a KAUST degree program, please see policy on Transfer Credit (p. 8).

Application Requirements

1. English language proficiency. KAUST requires a minimum TOEFL score of 79 on the IBT (Internet Based Test) or 6.0 on the IELTS (International English Language Testing System). Only official TOEFL or IELTS scores will be accepted. A TOEFL or IELTS score is not required if the applicant received a degree from an accredited institution in the United States, Canada, the United Kingdom, Ireland, Australia, or New Zealand.
2. Official, complete university transcript/mark sheets/graduation certificate/academic record from every institution previously attended. A scan of the official transcript provided by the university in the native language must be uploaded into the online application along with the certified English translation. Transcripts must include the university

grading scale for all documents submitted. If offered admission, an official final transcript must be sent to the Office of Admissions prior to arrival (during the onboarding process) in a sealed envelope.

3. Three letters of recommendation submitted on your behalf. Recommendation letters should be submitted through the application directly from the recommender. Recommenders should provide details about how they know your work, as well as comparative statements (e.g., top 1% of class, best in past five years, etc.), and insight into research ability.
4. Curriculum vitae (CV).

More information on application requirements and financial support is available [here](#).

Admission to Master of Science

Admission to the Master of Science (M.Sc.) program requires the satisfactory completion of an undergraduate science degree in a relevant or related area, such as engineering, mathematics or the physical, chemical and biological sciences.

Admission to M.Sc./Ph.D. Program

The M.Sc./Ph.D. program is for students looking for fast entry into the world of research. Students can apply for the Ph.D. program after completing a bachelor's degree and are engaged in research from the beginning of their program. The program typically takes four to five years to complete and students may complete a M.Sc. degree on the way to their Ph.D.

Admission to Doctor of Philosophy

Admission to the Doctor of Philosophy (Ph.D.) program requires the satisfactory completion of an undergraduate or master's degree in science in a relevant or related area, such as engineering, mathematics or the physical, chemical and biological sciences.

There are three phases and associated milestones for Ph.D. students:

- Passing a qualifying exam (if applicable)
- Passing an oral defense of the dissertation proposal
- Dissertation phase with a final defense

Admission to Dual Degree (Cotutelle) Program

A dual degree (cotutelle) program is a partnership with another university under which students may, after meeting each university's expectations, receive two diplomas, one from each institution. Dual degree programs share a common research program and often share coursework. Contracts are managed by the International Programs Office and are approved by program, division, and academic affairs.

Students wishing to enter into a dual degree Ph.D. agreement should contact the International Programs Office at vsrp@kaust.edu.sa.

Visiting Students

The Visiting Student Research Program (VSRP) is an opportunity for highly qualified students in their baccalaureate or post-baccalaureate studies to be engaged in research with faculty mentors in selected areas of research. The program typically lasts between three to six months, depending on the research project.

VSRP interns may participate in the program through one of the University's three academic divisions: Biological and Environmental Science and Engineering; Computer, Electrical and Mathematical Science and Engineering; or Physical Science and Engineering.

Currently enrolled KAUST students, KAUST alumni and students currently in a Ph.D. program, or those who have earned a Ph.D. are not eligible to participate. VSRP students who become regular admitted KAUST students are not eligible for transfer credit.

For more information about VSRP, please see [Visiting Student Policy](#) or contact vsrp@kaust.edu.sa.

Assessment Test

Admitted students may be required to take a written, degree-program specific assessment test when they arrive at KAUST at the discretion of the division. The purpose of the assessment is to determine whether students have mastered the prerequisites for undertaking graduate level courses taught in their chosen degree program. The academic advisor works with admitted students to develop a study plan if needed. Students are encouraged to prepare for the assessment by refreshing the general knowledge gained from their undergraduate education before arriving at KAUST. The study plan requirements must be

satisfactorily completed, in addition to University degree requirements.

Division of Biological and Environmental Science and Engineering (BESE)

To accomplish its mission and establish a knowledge and advanced technology platform, the BESE division organizes its research around six focal areas: environmental systems; epigenetics; functional biology; genomics; imaging/structural biology; and marine science.

These research areas build on interdisciplinary competences that are essential for studying the mechanisms through which living organisms and their environments interact, providing opportunities for new technological developments to optimize such interactions to improve the quality of life.

Researchers in BESE focus on topics relevant to the effects of the environment on organisms, the sustainable production of food, the use of high-salinity or poor-quality water, the optimization of energy used in the production of water and food, and the study and preservation of marine and coastal environments.

Research in the BESE division is driven by independent faculty labs and two research centers with which faculty can affiliate to perform applied, goal-oriented research. Centers affiliated with the division include:

- Red Sea Research Center (RSRC)
- Water Desalination and Reuse Center (WDRC)

In addition, from time to time, the division undertakes additional exploratory and collaborative research initiatives, with current activity in the following areas: desert agriculture; neuro-inspired high-performance computing; and nutrition, metabolism, adaptation and epigenetics.

Division Contacts

Samir Hamdan, Interim Dean
Stefan Arold, Associate Dean

More information is available on the BESE website here.

BESE Programs

Bioengineering (BioE)

Aims and Scope

A bioengineer develops and applies engineering principles to life sciences. The field focuses on the development and application of engineering concepts, principles, and methods to biological systems. We aim to model, monitor, and treat disorders and disabilities that affect living organisms, to develop algorithms which aid understanding biological systems and to engineer living systems in order to enhance their performance. The technologies that are generated in this area might include synthetic tissues or organs, sensors that are wired to human body and prosthetics that mimic the natural function of a limb, smart algorithms and end-to-end data analytical engines, bioreactors that improve the quality of treated wastewater and bacteria engineered to produce resources. Bioengineering integrates elements of electrical and mechanical engineering, biochemistry, chemistry, computer science and materials science with biology. Thanks to this multidisciplinary nature, the field of bioengineering often creates out-of-the-box solutions addressing and solving challenges in effect augmenting the well-being of living systems.

Program Contacts

Charlotte Hauser, Program Chair
Selena Franchini, Graduate Program Coordinator

Bioengineering M.Sc. Program

It is the sole responsibility of students to plan their graduate program in consultation with their academic advisor. Students are required to meet all deadlines. Students should be aware that most core courses are offered only once per year.

The Master of Science (M.Sc.) degree is awarded upon successful completion of a minimum of 36 credit hours. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit. Students are expected to complete the M.Sc. degree in three semesters. Satisfactory participation in every KAUST summer session is mandatory.

The M.Sc. Requirements

- Core courses (12 credits)
- Elective courses (12 credits)
- Research/capstone experience (12 credits)
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for three semesters during their M.Sc. and Ph.D. degrees (three seminars in each program)
- Completion of one Winter Enrichment Program (WEP)

Core Courses (12 credits) Mandatory for ALL tracks.

B 241	Molecular and Cellular Biology Lab	3
BioE 201	Foundations of Bioengineering	3
BioE 202	Foundations of Synthetic Biology	3
BioE 230	Foundations of Bioengineering Lab	3

These core courses are designed to provide students with the background needed to establish a solid foundation in the program area.

Elective Courses (12 credits)**Track 1: Biosensors and Bioelectronics**

B 316	Foundations in Bioimaging	3
BioE 319	Biomaterials and Biomedical Devices	3
ECE 202	Analog Integrated Circuits	3
ECE 205	Introduction to MEMS	3
ECE 208	Semiconductor Optoelectronic Devices	3
ECE 304	Integrated Microsystems	3
ECE 305	Advanced MEMS Devices and Technologies	3
ECE 310	Integrated Sensors	3
ME 222A	Mechatronics and Microsystems	3
ME 222B	Mechatronics and Intelligent Systems	3
MSE 201	Fundamentals of Materials Science and Engineering	3
MSE 225	Electronic Properties of Materials	3
MSE 318	Nanomaterials	3
MSE 322	Semiconductor Materials	3
MSE 324	Photophysics of Organic	3

Semiconductors

Others upon approval of the academic advisor

ME 222A is equivalent to EE 272A

ME 222B is equivalent to EE 272B

Track 2: Bioinformatics and Machine Learning

B 322	Computational Bioscience and Machine Learning	3
B 324	Machine Learning for Genomics and Health	3
CS 220	Data Analytics	3
CS 229	Machine Learning	3
CS 249	Algorithms in Bioinformatics	3
STAT 210	Applied Statistics and Data Analysis	3

Others upon approval of the academic advisor

Track 3: Biomaterials and Tissue Engineering

B 318	Tissue Engineering and Regenerative Medicine	3
B 320	Stem Cells and Molecular Medicine	3
BioE 319	Biomaterials and Biomedical Devices	3
ChemS 210	Material Chemistry I	3
ChemS 215	Polymers and Polymerization Processes	3
ChemS 360	Advanced Physical Chemistry I	3
CS 249	Algorithms in Bioinformatics	3
EnSE 310	Colloids, Interfaces, and Surfaces	3
MSE 201	Fundamentals of Materials Science and Engineering	3
MSE 225	Electronic Properties of Materials	3
MSE 310	Energy Storage Materials and Devices	3
MSE 318	Nanomaterials	3

Others upon approval of the academic advisor

Track 4: Synthetic Biology

B 204	Genomics	3
B 206	Synthetic Biology and Biotechnology	3
B 306	Synthetic Biology and Biotechnology	3
B 317	Advanced Environmental Microbiology	3
EnSE 314	Public Health Microbiology	3
EnSE 341	Processes in Environmental Biotechnology	3

PS 302 Biochemistry and Metabolic Engineering 3

Others upon approval of the academic advisor

The elective courses (which exclude research and internship credits) are designed to allow students to tailor their educational experience to meet individual research and educational objectives, with the permission of the academic advisor.

M.Sc. Thesis

Students wishing to pursue the thesis option must complete a minimum of 12 credits of thesis research (297).

The thesis defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than four members. At least two of the required members must be KAUST faculty. The chair plus one additional faculty member must be affiliated with the student's program. This membership can be summarized as:

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty or approved research scientist	Outside program
4	Additional faculty or research scientist	Inside or outside KAUST

Notes:

- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as member 2, 3, or 4, but may not be a research scientist
- Members 2 and 3 must use primary affiliation only
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 4 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 4

View a list of faculty and their affiliations here.

M.Sc. Non-Thesis

Students wishing to pursue the non-thesis option must complete a total of 12 research/capstone credits, with a minimum of 6 credits of directed research (299).

Students must complete the remaining credits through one or a combination of the options listed below:

- Broadening experience courses: courses that broaden a student's M.Sc. experience
- Internship: research-based summer internship (295) – students are only allowed to take one internship
- Ph.D. courses: courses numbered at the 300 level
- Additional directed research

Bioengineering Ph.D. Program

The Doctor of Philosophy (Ph.D.) degree is designed to prepare students for research careers in academia and industry.

There is a minimum residency requirement at KAUST of three and a half years for students entering with a bachelor's degree and two and a half years for students entering with a master's degree. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit.

The Ph.D. degree includes the following steps:

- Securing an academic advisor
- Successful completion of program coursework
- Passing the dissertation proposal defense to obtain candidacy status
- Preparing, submitting and successfully defending a doctoral dissertation

Ph.D. Course Requirements

The required coursework varies for students entering the Ph.D. degree with a bachelor's degree or a relevant master's degree. Students holding a bachelor's degree must complete all program core/mandatory courses and elective courses outlined in the master's degree section and are also required to complete the Ph.D. courses below. Students entering with a bachelor's degree will qualify to earn a master's degree by satisfying the master's degree requirements.

Students entering the Ph.D. degree with a relevant M.Sc.

degree must complete the requirements below, though additional courses may be required by the academic advisor.

Ph.D. Courses

- At least two 300-level courses
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for three semesters during their M.Sc. and Ph.D. degrees (three seminars in each program)
- Winter Enrichment Program (WEP) – students who completed WEP while earning the M.Sc. are not required to enroll in a full WEP for a second time during the Ph.D.

Ph.D. Proposal Defense

To advance to candidacy, students must successfully complete the Ph.D. proposal defense. Once students have pass the proposal defense, students are designated as Ph.D. or doctoral candidates.

Students who will not complete their proposal defense after one full year will need to complete a pre-proposal committee review. Students will provide a research update to determine progress and readiness towards the Ph.D. proposal defense. The required contents and deadlines for the committee review will be communicated to students by their GPC.

The proposal defense will be evaluated by a three member panel, consisting of two faculty from within the program, one of which is the academic advisor, and one outside of the program. The purpose of the proposal defense is to establish that students have the required academic and research ability and are adequately prepared to undertake PhD level research in the area proposed.

Expectations for the Proposal Defense:

- The Proposal Defense Committee is approved by the dean via the proposal committee form. Although guided by the academic advisor, students should have a say in committee formation and agree to its final composition (to be confirmed by GPC).
- The written proposal should include: 1) a literature review; 2) a statement of the research problem being addressed and the novelty (i.e. what new contribution will be explored); 3) an outline of the methodology to address these research questions; 4) detail of some preliminary results or analysis towards these research

objectives; 5) a description of the research plan for future activity, together with a timeline for completion.

- The proposal (less than 30 pages or 12,000 words; excluding references), should be provided to the committee at least 10 days before the scheduled defense date.
- Students will prepare a 30 minute presentation that focuses on an introduction to the problem (i.e. research motivation), an elaboration of the research questions (i.e. the novelty and innovation), a description of relevant research activities, preliminary analysis and results (i.e. the research progress) and a description of the remaining research plans and efforts required for completion (i.e. the plan).
- The remaining time will be allocated to questioning students on the contents and scope of their research. In the event of a public defense, the audience will be asked to address their questions to students directly.
- On completion of this round of questioning, the audience will be asked to leave the room and the committee will address their questions to students directly. These can cover all aspects of candidature and should be designed to establish (and test) knowledge and understanding of the chosen research topic.
- After a period of questioning, students are requested to leave the room, and a deliberation on their performance will be conducted.
- Students will be deemed to have either a) successfully defended and passed their proposal; b) unsuccessfully passed their proposal, but invited to re-sit the defense within a six month period (i.e. retake); unsuccessfully defended their proposal and be given a failing grade (i.e. fail without retake), resulting in the termination of their candidature.
- In the instance of a “fail without retake”, the decision of the committee must be unanimous and endorsed by the dean.

The Ph.D. dissertation proposal defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than six members. The chair, plus one additional faculty member must be affiliated with the student’s program.

Member	Role	Program Status	Member	Role	Program Status
1	First member/Academic Advisor/Chair	Within program	1	Chair	Within program
2	KAUST faculty member	Within program	2	Faculty	Within program
3	KAUST faculty member	Outside program	3	Faculty	Outside program
4	Faculty or approved research scientist	Inside or outside KAUST	4	External examiner	Outside KAUST
			5	Approved research scientist	Inside KAUST
			6	Additional faculty	Inside or outside KAUST

Notes:

- If you have a co-advisor this person can be considered one of the members, provided they come under the categories listed.
- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as members 2 or 3
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2 or 3 depending upon their affiliation with the student's program, they may also serve as co-chairs

Once constituted, the composition of the proposal committee can only be changed with the approval of both the academic advisor and the dean.

View a list of faculty and their affiliations here.

Ph.D. Final Defense Committee

The Ph.D. dissertation defense committee, which must be approved by the dean, must consist of at least four members and typically includes no more than six members. At least three of the required members must be KAUST faculty and one must be an external examiner who is external to KAUST. The chair, plus one additional faculty member must be affiliated with the student's program. The external examiner is not required to attend the defense, but must write a report on the dissertation and may attend the dissertation defense at the discretion of the program.

Notes:

- Members 1-4 are required, members 5 and 6 are optional
- Co-chairs may serve as either members 2, 3 or 6
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 6 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 6, but not as the external examiner

The only requirement with commonality with the proposal committee is the academic advisor, although it is expected that other members will carry forward to this committee.

Co-supervisors can be considered one of the above four members required, provided they come under the categories listed (i.e. meets the requirements of the position).

Bioscience (B)

Aims and Scope

The Bioscience (B) program plays a key role in tackling many of the global challenges being addressed by KAUST, with a general emphasis on 'adaptive biology', i.e. the study of the mechanisms that allow organisms to adapt to their environment. Understanding and engineering these complex mechanisms is critical in areas such as global food security or health care, and requires combining in-depth knowledge with advanced methodology and out-of-

the-box thinking.

To prepare students to be innovative contributors to life sciences, the Bioscience program comprises courses in cell and molecular biology, biophysics and computer science. Moreover, it interfaces smoothly with bioengineering as well as plant and marine sciences, and allows the choice of electives across all divisions.

The program is comprised of two tracks of self-contained courses consisting of lectures, seminars and laboratory classes. Each course provides an in-depth review of the subject and examples of current research in the field. In addition, the Bioscience program provides substantial and versatile hands-on research experience.

More information can be found at the Bioscience website here.

Bioscience M.Sc. Program

It is the responsibility of students to plan their graduate program in consultation with their academic advisor. Students are required to meet all deadlines. Students should be aware that most core courses are offered only once per year.

The Master of Science (M.Sc.) degree is awarded upon successful completion of a minimum of 36 credit hours. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit. Students are expected to complete the M.Sc. degree in three semesters. Satisfactory participation in every KAUST summer session is mandatory.

Assessment Test

Students are admitted to KAUST from a wide variety of programs and backgrounds. In order to facilitate the design of an appropriate study plan for each individual student, all admitted students are required to take a written assessment exam when they arrive on Campus. The exam will focus on mathematics and basic sciences. The purpose of the assessment is to determine whether students have mastered the prerequisites for undertaking graduate-level courses taught in the program. The Academic Advisor works with admitted students to develop a study plan if needed. Students are encouraged to prepare for the assessment

by refreshing the general knowledge gained from their undergraduate education before arriving at KAUST. The remedial study plan requirements must be satisfactorily completed, in addition to the University degree requirements.

The M.Sc. Requirements

- Core courses (9 credits)
- Elective courses (6 credits)
- Lab rotation (3 credits)
- Research/capstone experience (18 credits)
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for three semesters during their M.Sc. and Ph.D. degrees (three seminars in each program)
- Completion of one Winter Enrichment Program (WEP)

Core Courses (9 credits)

Track 1: Cell and Molecular Biology (choose 3 of 4)

B 204	Genomics	3
B 213	The Cell: Structure, Development and Physiology II	3
B 224	The Cell: Structure, Development and Physiology I	3
B 241	Molecular and Cellular Biology Lab	3

B 241: not optional

Track 2: Biophysics and Bioimaging (choose 3 of 4)

B 201	Biophysics	3
B 214	Biomolecule Structure and Function	3
B 241	Molecular and Cellular Biology Lab	3
B 316	Foundations in Bioimaging	3

B 241: not optional

These core courses are designed to provide students with the background needed to establish a solid foundation in the program area.

Elective Courses (6 credits)

Track 1: Cell and Molecular Biology

B 206	Synthetic Biology and Biotechnology	3
-------	-------------------------------------	---

B 211	Fundamentals of Molecular Microbiology	3
B 214	Biomolecule Structure and Function	3
B 316	Foundations in Bioimaging	3
B 317	Advanced Environmental Microbiology	3
B 320	Stem Cells and Molecular Medicine	3
B 321	Epigenetics and Chromatin	3
B 322	Computational Bioscience and Machine Learning	3
B 324	Machine Learning for Genomics and Health	3

Others upon approval of the academic advisor

Track 2: Biophysics and Bioimaging

B 204	Genomics	3
B 206	Synthetic Biology and Biotechnology	3
B 211	Fundamentals of Molecular Microbiology	3
B 213	The Cell: Structure, Development and Physiology II	3
B 224	The Cell: Structure, Development and Physiology I	3
B 318	Tissue Engineering and Regenerative Medicine	3
B 323	Advanced Bioimaging	3
B 324	Machine Learning for Genomics and Health	3
BioE 319	Biomaterials and Biomedical Devices	3

Others upon approval of the academic advisor

The elective courses (which exclude research and internship credits) are designed to allow students to tailor their educational experience to meet individual research and educational objectives, with the permission of the academic advisor.

Compulsory lab rotation (B 296): in addition, all incoming M.Sc. students are required to enroll into a rotation course during their first semester in the program. The goal of this course is to introduce students to various bioscience research groups in order to aid them in the selection of an academic advisor. Rotation assignments will be made by the mutual approval of designated faculty and students.

M.Sc. Thesis

Students wishing to pursue the thesis option must complete

total of 18 research/capstone credits, with a minimum of 12 credits of thesis research (297).

The thesis defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than four members. At least two of the required members must be KAUST faculty. The chair plus one additional faculty member must be affiliated with the student’s program. This membership can be summarized as:

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty or approved research scientist	Outside program
4	Additional faculty or research scientist	Inside or outside KAUST

Notes:

- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as member 2, 3, or 4, but may not be a research scientist
- Members 2 and 3 must use primary affiliation only
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 4 depending upon their affiliation with the student’s program, they may also serve as co-chairs
- Visiting professors may serve as member 4

View a list of faculty and their affiliations here.

M.Sc. Non-Thesis

Students wishing to pursue the non-thesis option must complete a total of 18 research/capstone credits, with a minimum of 6 credits of directed research (299).

Students must complete the remaining credits through one or a combination of the options listed below:

- Broadening experience courses: courses that broaden a student’s M.Sc. experience
- Internship: research-based summer internship (295) – students are only allowed to take one internship

- Ph.D. courses: courses numbered at the 300 level
- Additional directed research

Bioscience Ph.D. Program

The Doctor of Philosophy (Ph.D.) degree is designed to prepare students for research careers in academia and industry.

There is a minimum residency requirement at KAUST of three and a half years for students entering with a bachelor's degree and two and a half years for students entering with a master's degree. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit.

The Ph.D. degree includes the following steps:

- Securing an academic advisor
- Successful completion of program coursework
- Passing the dissertation proposal defense to obtain candidacy status
- Preparing, submitting and successfully defending a doctoral dissertation

Ph.D. Course Requirements

The required coursework varies for students entering the Ph.D. degree with a bachelor's degree or a relevant master's degree. Students holding a bachelor's degree must complete all program core/mandatory courses and elective courses outlined in the master's degree section (in lieu of B 296 Lab Rotation, MS/PHD students may take an additional elective) and are also required to complete the Ph.D. courses below. Students entering with a bachelor's degree will qualify to earn a master's degree by satisfying the master's degree requirements.

Students entering the Ph.D. degree with a relevant M.Sc. degree must complete the requirements below, though additional courses may be required by the academic advisor.

Ph.D. Courses

- At least two 300-level courses
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for three semesters during their M.Sc. and Ph.D. degrees (three seminars in each program)

- Winter Enrichment Program (WEP) – students who completed WEP while earning the M.Sc. are not required to enroll in a full WEP for a second time during the Ph.D.

Ph.D. Proposal Defense

To advance to candidacy, students must successfully complete the Ph.D. proposal defense. Once students have passed the proposal defense, students are designated as Ph.D. or doctoral candidates.

Students who will not complete their proposal defense after one full year will need to complete a pre-proposal committee review. Students will provide a research update to determine progress and readiness towards the Ph.D. proposal defense. The required contents and deadlines for the committee review will be communicated to students by their GPC.

The proposal defense will be evaluated by a three member panel, consisting of two faculty from within the program, one of which is the academic advisor, and one outside of the program. The purpose of the proposal defense is to establish that students have the required academic and research ability and are adequately prepared to undertake PhD level research in the area proposed.

Expectations for the Proposal Defense:

- The Proposal Defense Committee is approved by the dean via the proposal committee form. Although guided by the academic advisor, students should have a say in committee formation and agree to its final composition (to be confirmed by GPC).
- The written proposal should include: 1) a literature review; 2) a statement of the research problem being addressed and the novelty (i.e. what new contribution will be explored); 3) an outline of the methodology to address these research questions; 4) detail of some preliminary results or analysis towards these research objectives; 5) a description of the research plan for future activity, together with a timeline for completion.
- The proposal (less than 30 pages or 12,000 words; excluding references), should be provided to the committee at least 10 days before the scheduled defense date.
- Students will prepare a 30 minute presentation that focuses on an introduction to the problem (i.e. research motivation), an elaboration of the research questions (i.e. the novelty and innovation), a

description of relevant research activities, preliminary analysis and results (i.e. the research progress) and a description of the remaining research plans and efforts required for completion (i.e. the plan).

- The remaining time will be allocated to questioning students on the contents and scope of their research. In the event of a public defense, the audience will be asked to address their questions to students directly.
- On completion of this round of questioning, the audience will be asked to leave the room and the committee will address their questions to students directly. These can cover all aspects of candidature and should be designed to establish (and test) knowledge and understanding of the chosen research topic.
- After a period of questioning, students are requested to leave the room, and a deliberation on their performance will be conducted.
- Students will be deemed to have either a) successfully defended and passed their proposal; b) unsuccessfully passed their proposal, but invited to re-sit the defense within a six month period (i.e. retake); unsuccessfully defended their proposal and be given a failing grade (i.e. fail without retake), resulting in the termination of their candidature.
- In the instance of a “fail without retake”, the decision of the committee must be unanimous and endorsed by the dean.

The Ph.D. dissertation proposal defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than six members. The chair, plus one additional faculty member must be affiliated with the student’s program.

Member	Role	Program Status
1	First member/Academic Advisor/Chair	Within program
2	KAUST faculty member	Within program
3	KAUST faculty member	Outside program
4	Faculty or approved research scientist	Inside or outside KAUST

Notes:

- If you have a co-advisor this person can be considered one of the members, provided they come under the categories listed.
- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as members 2 or 3
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2 or 3 depending upon their affiliation with the student’s program, they may also serve as co-chairs

Once constituted, the composition of the proposal committee can only be changed with the approval of both the academic advisor and the dean.

View a list of faculty and their affiliations here.

Ph.D. Final Defense Committee

The Ph.D. dissertation defense committee, which must be approved by the dean, must consist of at least four members and typically includes no more than six members. At least three of the required members must be KAUST faculty and one must be an external examiner who is external to KAUST. The chair, plus one additional faculty member must be affiliated with the student’s program. The external examiner is not required to attend the defense, but must write a report on the dissertation and may attend the dissertation defense at the discretion of the program.

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty	Outside program
4	External examiner	Outside KAUST
5	Approved research scientist	Inside KAUST
6	Additional faculty	Inside or outside KAUST

Notes:

- Members 1-4 are required, members 5 and 6 are optional
- Co-chairs may serve as either members 2, 3 or 6

- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 6 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 6, but not as the external examiner

The only requirement with commonality with the proposal committee is the academic advisor, although it is expected that other members will carry forward to this committee.

Co-supervisors can be considered one of the above four members required, provided they come under the categories listed (i.e. meets the requirements of the position).

View a list of faculty and their affiliations here.

Environmental Science and Engineering (EnSE)

Aims and Scope

The Environmental Science and Engineering (EnSE) Program educate and train students to address many of the world's grand challenges related to sustainability and the environment, focusing around the intersection of water, energy and food nexus, and sustainable processes.

Students entering the program take three core courses and then take technical elective courses that cover important areas in water and wastewater treatment, water desalination, microbiological safety of water reuse, resource recovery, sustainability and management, surface science and materials for water, energy and environment. The core-plus elective courses will equip a student for a successful and productive career in these fields.

Environmental Science and Engineering M.Sc. Program

It is the responsibility of students to plan their graduate

program in consultation with their academic advisor. Students are required to meet all deadlines. Students should be aware that most core courses are offered only once per year.

The Master of Science (M.Sc.) degree is awarded upon successful completion of a minimum of 36 credit hours. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit. Students are expected to complete the M.Sc. degree in three semesters. Satisfactory participation in every KAUST summer session is mandatory.

The M.Sc. Requirements

- Core courses (9 credits)
- Elective courses (thesis: 9 credits; non-thesis: 15 credits)
- Research/capstone experience (thesis: 18 credits; non-thesis 12 credits)
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for three semesters during their M.Sc. and Ph.D. degrees (three seminars in each program)
- Completion of one Winter Enrichment Program (WEP)

Core Courses (9 credits)

EnSE 202	Aquatic Chemistry	3
EnSE 203	Fundamentals of Environmental Microbiology	3
EnSE 205	Principles of Environmental Sustainability	3

These core courses are designed to provide students with the background needed to establish a solid foundation in the program area.

Elective Courses (thesis: 9.0 credits; non-thesis: 15.0 credits)

EnSE 310	Colloids, Interfaces, and Surfaces	3
EnSE 314	Public Health Microbiology	3
EnSE 317	Selected Topics in Green Process Technology	3
EnSE 325	Water Desalination	3
EnSE 341	Processes in Environmental Biotechnology	3

Others upon approval of the academic advisor

The elective courses (which exclude research and internship credits) are designed to allow students to tailor

their educational experience to meet individual research and educational objectives, with the permission of the academic advisor.

M.Sc. Thesis

Students wishing to pursue the thesis option must complete 9 credits of elective courses and a total of 18 research/capstone credits, with a minimum of 12 credits of thesis research (297).

The thesis defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than four members. At least two of the required members must be KAUST faculty. The chair plus one additional faculty member must be affiliated with the student's program. This membership can be summarized as:

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty or approved research scientist	Outside program
4	Additional faculty or research scientist	Inside or outside KAUST

Notes:

- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as member 2, 3, or 4, but may not be a research scientist
- Members 2 and 3 must use primary affiliation only
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 4 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 4

View a list of faculty and their affiliations here.

M.Sc. Non-Thesis

Students wishing to pursue the non-thesis option must complete a total of 15 elective courses, of which three courses must be from EnSE, and a total of 12 research/capstone credits, with a minimum of 6 credits of

directed research (299).

Students must complete the remaining credits through one or a combination of the options listed below:

- Broadening experience courses: courses that broaden a student's M.Sc. experience
- Internship: research-based summer internship (295) – students are only allowed to take one internship
- Ph.D. courses: courses numbered at the 300 level
- Additional directed research

Environmental Science and Engineering Ph.D. Program

The Doctor of Philosophy (Ph.D.) degree is designed to prepare students for research careers in academia and industry.

There is a minimum residency requirement at KAUST of three and a half years for students entering with a bachelor's degree and two and a half years for students entering with a master's degree. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit.

The Ph.D. Degree includes the following steps:

- Securing an academic advisor
- Successful completion of program coursework
- Passing the dissertation proposal defense to obtain candidacy status
- Preparing, submitting and successfully defending a doctoral dissertation

Ph.D. Course Requirements

The required coursework varies for students entering the Ph.D. degree with a bachelor's degree or a relevant master's degree. Students holding a bachelor's degree must complete all program core/mandatory courses and elective courses outlined in the master's degree section and are also required to complete the Ph.D. courses below. Students entering with a bachelor's degree will qualify to earn a master's degree by satisfying the master's degree requirements.

Students entering the Ph.D. degree with a relevant M.Sc. degree must complete the requirements below, though additional courses may be required by the academic

advisor.

Ph.D. Courses

- At least two 300-level courses
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for three semesters during their M.Sc. and Ph.D. degrees (three seminars in each program)
- Winter Enrichment Program (WEP) – students who completed WEP while earning the M.Sc. are not required to enroll in a full WEP for a second time during the Ph.D.

Ph.D. Proposal Defense

To advance to candidacy, students must successfully complete the Ph.D. proposal defense. Once students have passed the proposal defense, students are designated as Ph.D. or doctoral candidates.

Students who will not complete their proposal defense after one full year will need to complete a pre-proposal committee review. Students will provide a research update to determine progress and readiness towards the Ph.D. proposal defense. The required contents and deadlines for the committee review will be communicated to students by their GPC.

The proposal defense will be evaluated by a three member panel, consisting of two faculty from within the program, one of which is the academic advisor, and one outside of the program. The purpose of the proposal defense is to establish that students have the required academic and research ability and are adequately prepared to undertake PhD level research in the area proposed.

Expectations for the Proposal Defense:

- The Proposal Defense Committee is approved by the dean via the proposal committee form. Although guided by the academic advisor, students should have a say in committee formation and agree to its final composition (to be confirmed by GPC).
- The written proposal should include: 1) a literature review; 2) a statement of the research problem being addressed and the novelty (i.e. what new contribution will be explored); 3) an outline of the methodology to address these research questions; 4) detail of some preliminary results or analysis towards these research objectives; 5) a description of the research plan for future activity, together with a timeline for

completion.

- The proposal (less than 30 pages or 12,000 words; excluding references), should be provided to the committee at least 10 days before the scheduled defense date.
- Students will prepare a 30 minute presentation that focuses on an introduction to the problem (i.e. research motivation), an elaboration of the research questions (i.e. the novelty and innovation), a description of relevant research activities, preliminary analysis and results (i.e. the research progress) and a description of the remaining research plans and efforts required for completion (i.e. the plan).
- The remaining time will be allocated to questioning students on the contents and scope of their research. In the event of a public defense, the audience will be asked to address their questions to students directly.
- On completion of this round of questioning, the audience will be asked to leave the room and the committee will address their questions to students directly. These can cover all aspects of candidature and should be designed to establish (and test) knowledge and understanding of the chosen research topic.
- After a period of questioning, students are requested to leave the room, and a deliberation on their performance will be conducted.
- Students will be deemed to have either a) successfully defended and passed their proposal; b) unsuccessfully passed their proposal, but invited to re-sit the defense within a six month period (i.e. retake); unsuccessfully defended their proposal and be given a failing grade (i.e. fail without retake), resulting in the termination of their candidature.
- In the instance of a “fail without retake”, the decision of the committee must be unanimous and endorsed by the dean.

The Ph.D. dissertation proposal defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than six members. The chair, plus one additional faculty member must be affiliated with the student’s program.

Member	Role	Program Status	Member	Role	Program Status
1	First member/Academic Advisor/Chair	Within program	1	Chair	Within program
2	KAUST faculty member	Within program	2	Faculty	Within program
3	KAUST faculty member	Outside program	3	Faculty	Outside program
4	Faculty or approved research scientist	Inside or outside KAUST	4	External examiner	Outside KAUST
			5	Approved research scientist	Inside KAUST
			6	Additional faculty	Inside or outside KAUST

Notes:

- If you have a co-advisor this person can be considered one of the members, provided they come under the categories listed.
- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as members 2 or 3
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2 or 3 depending upon their affiliation with the student's program, they may also serve as co-chairs

Once constituted, the composition of the proposal committee can only be changed with the approval of both the academic advisor and the dean.

View a list of faculty and their affiliations here.

Ph.D. Final Defense Committee

The Ph.D. dissertation defense committee, which must be approved by the dean, must consist of at least four members and typically includes no more than six members. At least three of the required members must be KAUST faculty and one must be an external examiner who is external to KAUST. The chair, plus one additional faculty member must be affiliated with the student's program. The external examiner is not required to attend the defense, but must write a report on the dissertation and may attend the dissertation defense at the discretion of the program.

Notes:

- Members 1-4 are required, members 5 and 6 are optional
- Co-chairs may serve as either members 2, 3 or 6
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 6 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 6, but not as the external examiner

The only requirement with commonality with the proposal committee is the academic advisor, although it is expected that other members will carry forward to this committee.

Co-supervisors can be considered one of the above four members required, provided they come under the categories listed (i.e. meets the requirements of the position).

Marine Science (MarS)

Aims and Scope

The Marine Science (MarS) program takes advantage of KAUST's location on the Red Sea, a living laboratory with great potential for exciting science. The program addresses the biology and ecology of the multitude of marine life forms. There is an intentional focus on the local Red Sea system, both as a primary study system and as a system with which general concepts from other marine systems can be compared.

The goal of the Marine Science program is to develop an integrated understanding of the Red Sea's ecosystem as well as marine ecosystems in general, including fundamental biology at the molecular and genomic levels, symbiosis with algae and prokaryotes (bacteria and archaea), associated communities of fish and corals and the physical and chemical environment that impacts and shapes them. This understanding could have an impact on global carbon cycling, endangered species and how we manage the harvesting of resources from the oceans.

Marine Science M.Sc. Program

It is the responsibility of students to plan their graduate program in consultation with their academic advisor. Students are required to meet all deadlines. Students should be aware that most core courses are offered only once per year.

The Master of Science degree (M.Sc.) is awarded upon successful completion of a minimum of 36 credit hours. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit. Students are expected to complete the M.Sc. degree in three semesters. Satisfactory participation in every KAUST summer session is mandatory.

The M.Sc. Requirements

- Core courses (9 credits)
- Elective courses (0-15 credits)
- Research/capstone experience (12-27 credits)
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for three semesters during their M.Sc. and Ph.D. degrees (three seminars in each program)
- Completion of one Winter Enrichment Program (WEP)

Core Courses (9 credits)

B 204	Genomics	3
B 211	Fundamentals of Molecular Microbiology	3
MarS 221	Marine Life	3

MarS 323	Pelagic Ecology	3
MarS 335	Oceanography	3

Choose at least 1 of 3 for B 204, B 211, and MARS 323.

MARS 221 and MARS 335 are mandatory.

These core courses are designed to provide students with the background needed to establish a solid foundation in the program area.

Elective Courses (0-15 credits)

MarS 319	Movement Ecology	3
MarS 326	Coral Reef Ecology	3
MarS 329	Marine Microbial Ecology	3
MarS 330	Marine Ecological Genomics	3
MarS 332	Optical Oceanography	3

Others upon approval of the academic advisor

The elective courses (which exclude research and internship credits) are designed to allow students to tailor their educational experience to meet individual research and educational objectives, with the permission of the academic advisor.

M.Sc. Thesis

All students in the MarS program are expected to pursue a thesis. To that end, they must complete a total of 12-27 research/capstone credits, with a minimum of 12 credits of thesis research (297).

Students must complete the remaining credits through one or a combination of the options listed below:

- Broadening experience courses: courses that broaden the M.Sc. experience
- Internship: research-based summer internship (295) – students are only allowed to take one internship
- Ph.D. courses: courses numbered at the 300 level
- Additional directed research

The thesis defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than four members. At least two of the required members must be KAUST faculty. The chair plus one additional faculty member must be affiliated with the student's program. This membership can be summarized as:

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty or approved research scientist	Outside program
4	Additional faculty or research scientist	Inside or outside KAUST

Notes:

- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as member 2, 3, or 4, but may not be a research scientist
- Members 2 and 3 must use primary affiliation only
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 4 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 4

View a list of faculty and their affiliations here.

Marine Science Ph.D. Program

The Doctor of Philosophy (Ph.D.) degree is designed to prepare students for research careers in academia and industry.

There is a minimum residency requirement at KAUST of three and a half years for students entering with a bachelor's degree and two and a half years for students entering with a master's degree. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit.

The Ph.D. degree includes the following steps:

- Securing an academic advisor
- Successful completion of program coursework
- Passing the dissertation proposal defense to obtain candidacy status
- Preparing, submitting and successfully defending a doctoral dissertation

Ph.D. Course Requirements

The required coursework varies for students entering the Ph.D. degree with a bachelor's degree or a relevant master's degree. Students holding a bachelor's degree must complete all program core/mandatory courses and elective courses outlined in the master's degree section and are also required to complete the Ph.D. courses below. Students entering with a bachelor's degree will qualify to earn a master's degree by satisfying the master's degree requirements.

Students entering the Ph.D. degree with a relevant M.Sc. degree must complete the requirements below, though additional courses may be required by the academic advisor.

Ph.D. Courses

- At least two 300-level courses
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for three semesters during their M.Sc. and Ph.D. degrees (three seminars in each program)
- Winter Enrichment Program (WEP) – students who completed WEP while earning the M.Sc. are not required to enroll in a full WEP for a second time during the Ph.D.

Ph.D. Proposal Defense

To advance to candidacy, students must successfully complete the Ph.D. proposal defense. Once students have passed the proposal defense, students are designated as Ph.D. or doctoral candidates.

Students who will not complete their proposal defense after one full year will need to complete a pre-proposal committee review. Students will provide a research update to determine progress and readiness towards the Ph.D. proposal defense. The required contents and deadlines for the committee review will be communicated to students by their GPC.

The proposal defense will be evaluated by a three member panel, consisting of two faculty from within the program, one of which is the academic advisor, and one outside of the program. The purpose of the proposal defense is to establish that students have the required academic and research ability and are adequately prepared to undertake PhD level research in the area proposed.

Expectations for the Proposal Defense:

- The Proposal Defense Committee is approved by the dean via the proposal committee form. Although guided by the academic advisor, students should have a say in committee formation and agree to its final composition (to be confirmed by GPC).
- The written proposal should include: 1) a literature review; 2) a statement of the research problem being addressed and the novelty (i.e. what new contribution will be explored); 3) an outline of the methodology to address these research questions; 4) detail of some preliminary results or analysis towards these research objectives; 5) a description of the research plan for future activity, together with a timeline for completion.
- The proposal (less than 30 pages or 12,000 words; excluding references), should be provided to the committee at least 10 days before the scheduled defense date.
- Students will prepare a 30 minute presentation that focuses on an introduction to the problem (i.e. research motivation), an elaboration of the research questions (i.e. the novelty and innovation), a description of relevant research activities, preliminary analysis and results (i.e. the research progress) and a description of the remaining research plans and efforts required for completion (i.e. the plan).
- The remaining time will be allocated to questioning students on the contents and scope of their research. In the event of a public defense, the audience will be asked to address their questions to students directly.
- On completion of this round of questioning, the audience will be asked to leave the room and the committee will address their questions to students directly. These can cover all aspects of candidature and should be designed to establish (and test) knowledge and understanding of the chosen research topic.
- After a period of questioning, students are requested to leave the room, and a deliberation on their performance will be conducted.
- Students will be deemed to have either a) successfully defended and passed their proposal; b) unsuccessfully passed their proposal, but invited to re-sit the defense within a six month period (i.e. retake); unsuccessfully defended their proposal and be given a failing grade (i.e. fail without retake), resulting in the termination of their candidature.

- In the instance of a “fail without retake”, the decision of the committee must be unanimous and endorsed by the dean.

The Ph.D. dissertation proposal defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than six members. The chair, plus one additional faculty member must be affiliated with the student’s program.

Member	Role	Program Status
1	First member/Academic Advisor/Chair	Within program
2	KAUST faculty member	Within program
3	KAUST faculty member	Outside program
4	Faculty or approved research scientist	Inside or outside KAUST

Notes:

- If you have a co-advisor this person can be considered one of the members, provided they come under the categories listed.
- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as members 2 or 3
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2 or 3 depending upon their affiliation with the student’s program, they may also serve as co-chairs

Once constituted, the composition of the proposal committee can only be changed with the approval of both the academic advisor and the dean.

View a list of faculty and their affiliations here.

Ph.D. Final Defense Committee

The Ph.D. dissertation defense committee, which must be approved by the dean, must consist of at least four members and typically includes no more than six members. At least three of the required members must be KAUST faculty and one must be an external examiner who is

external to KAUST. The chair, plus one additional faculty member must be affiliated with the student's program. The external examiner is not required to attend the defense, but must write a report on the dissertation and may attend the dissertation defense at the discretion of the program.

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty	Outside program
4	External examiner	Outside KAUST
5	Approved research scientist	Inside KAUST
6	Additional faculty	Inside or outside KAUST

Notes:

- Members 1-4 are required, members 5 and 6 are optional
- Co-chairs may serve as either members 2, 3 or 6
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 6 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 6, but not as the external examiner

The only requirement with commonality with the proposal committee is the academic advisor, although it is expected that other members will carry forward to this committee.

Co-supervisors can be considered one of the above four members required, provided they come under the categories listed (i.e. meets the requirements of the position).

View a list of faculty and their affiliations here.

Plant Science (PS)

Aims and Scope

The goal of the Plant Science (PS) program is to develop a thorough understanding of plant growth and function under challenging environmental conditions, such as those found

in Saudi Arabia. The fundamental biology of plants is studied at a range of levels (e.g. genomic, proteomic, metabolomics), and the interactions of plants with their environment, both abiotic (heat, salt and drought) and biotic (pathogens and symbionts) are investigated. Application of this knowledge will allow development of plants with enhanced tolerance to environmental stresses and help to establish sustainable agriculture systems in arid regions of the world.

Plant Science M.Sc. Program

It is the responsibility of students to plan their graduate program in consultation with their academic advisor. Students are required to meet all deadlines. Students should be aware that most core courses are offered only once per year.

The Master of Science (M.Sc.) degree is awarded upon successful completion of a minimum of 36 credit hours. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit. Students are expected to complete the M.Sc. degree in three semesters. Satisfactory participation in every KAUST summer session is mandatory.

Assessment Test

Students are admitted to KAUST from a wide variety of programs and backgrounds. In order to facilitate the design of an appropriate study plan for each individual student, all admitted students are required to take a written assessment exam when they arrive on Campus. The exam will focus on mathematics and basic sciences. The purpose of the assessment is to determine whether students have mastered the prerequisites for undertaking graduate-level courses taught in the program. The Academic Advisor works with admitted students to develop a study plan if needed. Students are encouraged to prepare for the assessment by refreshing the general knowledge gained from their undergraduate education before arriving at KAUST. The remedial study plan requirements must be satisfactorily completed, in addition to the University degree requirements.

The M.Sc. Requirements

- Core courses (12 credits)

- Elective courses (6-12 credits)
- Research/capstone experience (12-18 credits)
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for three semesters during their M.Sc. and Ph.D. degrees (three seminars in each program)
- Completion of one Winter Enrichment Program (WEP)

Core Courses (12 credits)

B 211	Fundamentals of Molecular Microbiology	3
B 241	Molecular and Cellular Biology Lab	3
PS 201	Concepts of Developmental Biology and Genetics	3
PS 202	Plant Physiology and Adaptation	3

These core courses are designed to provide students with the background needed to establish a solid foundation in the program area.

Elective Courses (6-12 credits)

B 204	Genomics	3
B 206	Synthetic Biology and Biotechnology	3
B 209	Molecular Genetics	3

Others upon approval of the academic advisor.

The elective courses (which exclude research and internship credits) are designed to allow students to tailor their educational experience to meet individual research and educational objectives, with the permission of the academic advisor.

M.Sc. Thesis

Students wishing to pursue the thesis option must complete total of 12-18 research/capstone credits, with a minimum of 12 credits of thesis research (297).

The thesis defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than four members. At least two of the required members must be KAUST faculty. The chair plus one additional faculty member must be affiliated with the student's program. This membership can be summarized as:

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty or approved research scientist	Outside program
4	Additional faculty or research scientist	Inside or outside KAUST

Notes:

- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as member 2, 3, or 4, but may not be a research scientist
- Members 2 and 3 must use primary affiliation only
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 4 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 4

View a list of faculty and their affiliations here.

M.Sc. Non-Thesis

Students wishing to pursue the non-thesis option must complete a total of 12-18 capstone credits, with a minimum of 6 credits of directed research (299).

Students must complete the remaining credits through one or a combination of the options listed below:

- Broadening experience courses: courses that broaden a student's M.Sc. experience
- Internship: research-based summer internship (295) – students are only allowed to take one internship
- Ph.D. courses: courses numbered at the 300 level
- Additional directed research

Plant Science Ph.D. Program

The Doctor of Philosophy (Ph.D.) degree is designed to prepare students for research careers in academia and industry.

There is a minimum residency requirement at KAUST of three and a half years for students entering with a bachelor's degree and two and a half years for students entering with a master's degree. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit.

The Ph.D. degree includes the following steps:

- Securing an academic advisor
- Successful completion of program coursework
- Passing the dissertation proposal defense to obtain candidacy status
- Preparing, submitting and successfully defending a doctoral dissertation

Ph.D. Course Requirements

The required coursework varies for students entering the Ph.D. degree with a bachelor's degree or a relevant master's degree. Students holding a bachelor's degree must complete all program core/mandatory courses and elective courses outlined in the master's degree section and are also required to complete the Ph.D. courses below. Students entering with a bachelor's degree will qualify to earn a master's degree by satisfying the master's degree requirements.

Students entering the Ph.D. degree with a relevant M.Sc. degree must complete the requirements below, though additional courses may be required by the academic advisor.

Ph.D. Courses

- At least two 300-level courses
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for three semesters during their M.Sc. and Ph.D. degrees (three seminars in each program)
- Winter Enrichment Program (WEP) – students who completed WEP while earning the M.Sc. are not required to enroll in a full WEP for a second time during the Ph.D.

Ph.D. Proposal Defense

To advance to candidacy, students must successfully complete the Ph.D. proposal defense. Once students have passed the proposal defense, students are designated as Ph.D. or doctoral candidates.

Students who will not complete their proposal defense after one full year will need to complete a pre-proposal committee review. Students will provide a research update to determine progress and readiness towards the Ph.D. proposal defense. The required contents and deadlines for the committee review will be communicated to students by their GPC.

The proposal defense will be evaluated by a three member panel, consisting of two faculty from within the program, one of which is the academic advisor, and one outside of the program. The purpose of the proposal defense is to establish that students have the required academic and research ability and are adequately prepared to undertake PhD level research in the area proposed.

Expectations for the Proposal Defense:

- The Proposal Defense Committee is approved by the dean via the proposal committee form. Although guided by the academic advisor, students should have a say in committee formation and agree to its final composition (to be confirmed by GPC).
- The written proposal should include: 1) a literature review; 2) a statement of the research problem being addressed and the novelty (i.e. what new contribution will be explored); 3) an outline of the methodology to address these research questions; 4) detail of some preliminary results or analysis towards these research objectives; 5) a description of the research plan for future activity, together with a timeline for completion.
- The proposal (less than 30 pages or 12,000 words; excluding references), should be provided to the committee at least 10 days before the scheduled defense date.
- Students will prepare a 30 minute presentation that focuses on an introduction to the problem (i.e. research motivation), an elaboration of the research questions (i.e. the novelty and innovation), a description of relevant research activities, preliminary analysis and results (i.e. the research progress) and a description of the remaining research plans and efforts required for completion (i.e. the plan).
- The remaining time will be allocated to questioning students on the contents and scope of their research. In the event of a public defense, the audience will be asked to address their questions to students directly.
- On completion of this round of questioning, the audience will be asked to leave the room and the

committee will address their questions to students directly. These can cover all aspects of candidature and should be designed to establish (and test) knowledge and understanding of the chosen research topic.

- After a period of questioning, students are requested to leave the room, and a deliberation on their performance will be conducted.
- Students will be deemed to have either a) successfully defended and passed their proposal; b) unsuccessfully passed their proposal, but invited to re-sit the defense within a six month period (i.e. retake); unsuccessfully defended their proposal and be given a failing grade (i.e. fail without retake), resulting in the termination of their candidature.
- In the instance of a “fail without retake”, the decision of the committee must be unanimous and endorsed by the dean.

The Ph.D. dissertation proposal defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than six members. The chair, plus one additional faculty member must be affiliated with the student’s program.

Member	Role	Program Status
1	First member/Academic Advisor/Chair	Within program
2	KAUST faculty member	Within program
3	KAUST faculty member	Outside program
4	Faculty or approved research scientist	Inside or outside KAUST

Notes:

- If you have a co-advisor this person can be considered one of the members, provided they come under the categories listed.
- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as members 2 or 3
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees

- Professors of practice and research professors may serve as members 2 or 3 depending upon their affiliation with the student’s program, they may also serve as co-chairs

Once constituted, the composition of the proposal committee can only be changed with the approval of both the academic advisor and the dean.

View a list of faculty and their affiliations here.

Ph.D. Final Defense Committee

The Ph.D. dissertation defense committee, which must be approved by the dean, must consist of at least four members and typically includes no more than six members. At least three of the required members must be KAUST faculty and one must be an external examiner who is external to KAUST. The chair, plus one additional faculty member must be affiliated with the student’s program. The external examiner is not required to attend the defense, but must write a report on the dissertation and may attend the dissertation defense at the discretion of the program.

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty	Outside program
4	External examiner	Outside KAUST
5	Approved research scientist	Inside KAUST
6	Additional faculty	Inside or outside KAUST

Notes:

- Members 1-4 are required, members 5 and 6 are optional
- Co-chairs may serve as either members 2, 3 or 6
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 6 depending upon their affiliation with the student’s program, they may also serve as co-chairs
- Visiting professors may serve as member 6, but not as the external examiner

The only requirement with commonality with the proposal committee is the academic advisor, although it is expected that other members will carry forward to this committee.

Co-supervisors can be considered one of the above four members required, provided they come under the categories listed (i.e. meets the requirements of the position).

Division of Computer, Electrical and Mathematical Science and Engineering (CEMSE)

Smart man-engineered environment is no longer the realm of science fiction. We are surrounded by intelligent machines that follow our algorithms and improve the quality of our life. We predict highly complex natural phenomena, such as climate, with mathematical models of ever-increasing accuracy. We use our understanding, translated in the form of mathematical computations, to design novel materials and to optimize important processes that help us resolve big issues such as availability of clean water and energy. Computer, electrical, and mathematical sciences and engineering are cornerstones of modern life, they help us ensure the continuity and sufficiency of the supply of water, food, energy in a sustainable environment; they drive our industrial production lines, they give us new materials for upcoming technologies and better healthcare. This is what CEMSE is for.

Research in the CEMSE division is driven by independent faculty labs and three research centers with which faculty can affiliate to perform applied, goal-oriented research. Centers affiliated with the division include:

- Computational Bioscience Research Center (CBRC)
- Extreme Computing Research Center (ECRC)
- Visual Computing Center (VCC)

In addition, from time to time, the division undertakes special exploratory and collaborative research initiatives, currently in sensors and uncertainty quantification.

Division Contacts

Omar Knio, Interim Dean
Khaled Nabil Salama, Associate Dean

More information is available on the CEMSE website here.

CEMSE Programs

Applied Mathematics and

Computational Science (AMCS)

Aims and Scope

The Applied Mathematics and Computational Sciences (AMCS) program educates students to construct and solve mathematical and computational models of real-world problems. Two degree programs are offered: the M.Sc. degree (under either a thesis or a non-thesis option) and the Ph.D. degree. Admission to a degree program does not guarantee transfer to another.

The AMCS program offers specializations in two distinct directions (called “tracks”): applied mathematics (AM) and computational science and engineering (CSE).

The requirements for the different tracks are outlined below. All students in the M.Sc. program are guided by an academic advisor to develop their program of study. It is the responsibility of students to plan their graduate program in consultation with their academic advisor. Students are required to meet all deadlines.

Program Contacts

Diogo Gomes, Program Chair
Aida Mizouni-Hoteit, Senior Graduate Education Specialist

More information can be found at the AMCS website here.

Assessment Test (M.Sc. and Ph.D.)

Students are admitted to KAUST from a wide variety of programs and backgrounds. To design an appropriate study plan for students, all incoming students are required to take an assessment during orientation week. There is no grade for the assessment.

The purpose of this assessment is to determine whether students have mastered the prerequisites for undertaking graduate-level courses taught in the program. The academic advisor uses the results of the assessments to design a study plan with a list of courses aimed at addressing content areas that may impede a student from successful completion of the degree requirements. Students

are encouraged to prepare for the assessment by refreshing the general knowledge gained from their undergraduate education before arriving at KAUST. The study plan requirements must be satisfactorily completed in addition to the University degree requirements.

Credits

All students are required to be enrolled in 12 credits each semester and 6 credits during the summer session. These credits can comprise coursework, dissertation research, directed research, thesis credits or internships. All AMCS 100 level courses in addition to AMCS 201, AMCS 202, and AMCS 206 are not counted toward the number of credits required to graduate.

Applied Mathematics and Computational Science M.Sc. Program

It is the responsibility of students to plan their graduate program in consultation with their academic advisor. Students are required to meet all deadlines. Students should be aware that most core courses are offered only once per year.

The Master of Science (M.Sc.) degree is awarded upon successful completion of a minimum of 36 credit hours. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit. Students are expected to complete the M.Sc. degree in three semesters. Satisfactory participation in every KAUST summer session is mandatory.

The M.Sc. Requirements

- Core courses (6-15 credits)
- Elective courses (9-18 credits)
- Research/capstone experience (12 credits)
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for the first two semesters
- Completion of one Winter Enrichment Program (WEP)

Winter Enrichment Program

Students are required to satisfactorily complete at least one full winter enrichment program (WEP).

Core Courses (6-15 credits)

Applied Mathematics (AM) Track (15 credits)

AMCS 231	Applied Partial Differential Equations I	3
AMCS 235	Real Analysis	3
AMCS 251	Numerical Linear Algebra	3
AMCS 252	Numerical Analysis of Differential Equations	3
AMCS 241/STAT 250	Stochastic Processes	3
	Or	
STAT 220	Probability and Statistics	3

The Ph.D. qualifying exam consists of three written subject exams, one in each of the core courses of AMCS 231, AMCS 251, and STAT 220 or AMCS 241/STAT 250. See Subject-Based Qualifying Examination (p. 45) for details.

Computational Science and Engineering (CSE) Track (6 credits)

Students must fulfil at least two of the four core courses below:

AMCS 231	Applied Partial Differential Equations I	3
AMCS 251	Numerical Linear Algebra	3
AMCS 252	Numerical Analysis of Differential Equations	3
AMCS 241/STAT 250	Stochastic Processes	3
	Or	
STAT 220	Probability and Statistics	3

The Ph.D. qualifying exam consists of three written subject exams, one in each of the core courses of AMCS 231, AMCS 251, and STAT 220 or AMCS 241/STAT 250. See Subject-Based Qualifying Examination (p. 45) for details.

These core courses are designed to provide students with the background needed to establish a solid foundation in the program area. Students should be aware that most core courses are offered only once per year.

Elective Courses (9-18 credits)

Applied Mathematics (AM) Track

9 credits of elective courses not necessarily within the AMCS program. Some credits may be taken outside the AMCS program subject to the approval of the academic advisor.

Computational Science and Engineering (CSE) Track

Students in the CSE track must take an additional eighteen

credits of course work made up of:

- 6 credits of computer science courses
- 6 credits in applications of modelling. Eligible application courses include AMCS 332 (mathematical modelling). At least one of the modelling courses should be from outside AMCS. In case both courses are from outside AMCS, it is recommended that they be drawn from the same track.
- 6 credits from AMCS courses

The elective courses (which exclude research, internship credits, and IED courses) are designed to allow students to tailor their educational experience to meet individual research and educational objectives, with the permission of the academic advisor.

M.Sc. Thesis

The thesis defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than four members. At least two of the required members must be KAUST faculty. The chair plus one additional faculty member must be affiliated with the student's program. This membership can be summarized as:

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty or approved research scientist	Outside program
4	Additional faculty or research scientist	Inside or outside KAUST

Notes:

- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as member 2, 3, or 4, but may not be a research scientist
- Members 2 and 3 must use primary affiliation only
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 4 depending upon their affiliation with the student's program, they may also

serve as co-chairs

- Visiting professors may serve as member 4

View a list of faculty and their affiliations here.

M.Sc. Non-Thesis

Students wishing to pursue the non-thesis option must complete a total of 12 capstone credits, with a maximum of 6 credits of directed research (299).

Students must complete the remaining credits through one or a combination of the options listed below:

- Broadening experience courses: courses that broaden a student's M.Sc. experience
- Internship: research-based summer internship (295) – students are only allowed to take one internship
- Ph.D. courses: courses numbered at the 300 level

Applied Mathematics and Computational Science Ph.D. Program

The Doctor of Philosophy (Ph.D.) degree is designed to prepare students for research careers in academia and industry.

There is a minimum residency requirement at KAUST of three and a half years for students entering with a bachelor's degree and two and a half years for students entering with a master's degree. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit.

The Ph.D. degree includes the following steps:

- Securing an academic advisor
- Successful completion of program coursework
- Passing the qualifying examination
- Passing the dissertation proposal defense to obtain candidacy status
- Preparing, submitting and successfully defending a doctoral dissertation

Ph.D. Course Requirements

The required coursework varies for students entering the Ph.D. degree with a bachelor's degree or a relevant master's degree. Students holding a bachelor's degree must complete all program core/mandatory courses and elective

courses outlined in the master's degree section and are also required to complete the Ph.D. courses below. Students entering with a bachelor's degree will qualify to earn a master's degree by satisfying the master's degree requirements.

Students entering the Ph.D. degree with a relevant M.Sc. degree must complete the requirements below, though additional courses may be required by the academic advisor.

Ph.D. Courses

- At least four courses of which at least two must be from the AMCS 300 level course list
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for the first two semesters unless they have fulfilled this requirement during a M.Sc. at KAUST
- Winter Enrichment Program (WEP) – students who completed WEP while earning the M.Sc. are not required to enroll in a full WEP for a second time during the Ph.D.

Academic (Dissertation) Advisor

The selected academic or dissertation advisor must be a full-time program-affiliated assistant, associate or full professor at KAUST. Students may also select an advisor from another program at KAUST. This advisor can only become project-affiliated for the specific dissertation project with program level approval. Project affiliation approval must be completed prior to commencing research.

Ph.D. Candidacy

In addition to the coursework requirements, students must successfully complete the required Ph.D. candidacy milestones to progress towards Ph.D. candidate status. These milestones consist of the subject-based qualifying examination and Ph.D. proposal defense. Once students have advanced to candidacy, students are designated as Ph.D. or doctoral candidates.

Subject-Based Qualifying Examination

The qualifying exam consists of three written subject exams, one in each of the core courses of AM or CSE listed below.

Applied Mathematics (AM) Track

AMCS 231 – Applied Partial Differential Equations

STAT 220 – Probability and Statistics or AMCS 241/STAT 250: Stochastic Processes

AMCS 251 – Numerical Linear Algebra

Computational Science and Engineering (CSE) Track

AMCS 231 – Applied Partial Differential Equations

STAT 220 – Probability and Statistics or AMCS 241/STAT 250: Stochastic Processes

AMCS 251 – Numerical Linear Algebra

The choice of qualifying exams must be approved by the academic advisor and program chair and communicated to the GPC within the first month of the semester in which students intend to complete the requirement. Students have two attempts to take each exam and can pass them in any combination. All students are required to pass all three qualifying exams within one year of entering the program.

Students in the CSE track can replace one of the three qualifying exams with a CSE-related qualifying exam in another program. If the passing grade in that qualifying exam is determined by the overall grade of a course, the student must score 70% or more in the final exam (in addition to satisfying all other requirements for that program). The one-year restriction to fulfill the requirement still applies in this case.

The qualifying exam is offered twice a year: during the final exams of the fall semester and immediately after the final exams of the spring semester. The fall semester qualifying exam is the final exam of each of the abovementioned courses given during the fall semester. The spring semester exam is a three-hour exam per subject prepared by the faculty representative. Students are encouraged to take all three qualifiers in their first semester of the Ph.D. program.

Students that are enrolled in 100 level classes during their first semester as Ph.D. students can ask for an extension of a semester to complete the qualifying exams. This extension does not increase the number of attempts. No further extensions will be given except for extenuating circumstances.

Ph.D. Proposal Defense Committee

The Ph.D. dissertation proposal defense committee, which must be approved by the dean, must consist of at least

three members and typically includes no more than six members. The chair, plus one additional faculty member must be affiliated with the student's program.

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty	Outside program
4	Approved research scientist	Inside KAUST

Notes:

- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as members 2 or 3
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2 or 3 depending upon their affiliation with the student's program, they may also serve as co-chairs

Once constituted, the composition of the proposal committee can only be changed with the approval of both the academic advisor and the dean.

View a list of faculty and their affiliations here.

Ph.D. Dissertation Proposal Defense

The purpose of the dissertation proposal defense is to demonstrate that students have the ability and are adequately prepared to undertake Ph.D. level research in the proposed area. This preparation includes necessary knowledge of the chosen subject, a review of the literature and preparatory theory or experimentation as applicable. The dissertation proposal defense is the second part of the qualification milestones that must be completed to become a Ph.D. candidate. Ph.D. students are required to complete the dissertation proposal defense within one year after passing the qualifying exam. The dissertation proposal defense includes two aspects: a written research proposal and an oral research proposal defense. Students should discuss with their academic advisor the form and venue of the defense, and whether the proposal discussion will be public or not.

There are four possible outcomes from this dissertation proposal defense:

- Pass
- Pass with conditions
- Retake
- Fail without retake

A pass is achieved when the committee agrees with no more than one dissenting vote. In the instance of a pass with conditions, the entire committee must agree on the required conditions and if they cannot, the dean decides. The deadline to complete the conditions is three months after the defense date, unless the committee unanimously agrees to change it. In the instance of a fail without retake, the decision of the committee must be unanimous. Students who fail without retake or who fail the retake will be dismissed from the University.

Students who successfully pass the dissertation proposal defense are deemed Ph.D. candidates. At the end of the proposal defense, a Ph.D. proposal results form must be completed and handed out to the GPC.

Ph.D. Final Defense Committee

The Ph.D. dissertation defense committee, which must be approved by the dean, must consist of at least four members and typically includes no more than six members. At least three of the required members must be KAUST faculty and one must be an external examiner who is external to KAUST. The chair, plus one additional faculty member must be affiliated with the student's program. The external examiner is not required to attend the defense, but must write a report on the dissertation and may attend the dissertation defense at the discretion of the program.

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty	Outside program
4	External examiner	Outside KAUST
5	Approved research scientist	Inside KAUST
6	Additional faculty	Inside or outside KAUST

Notes:

- Members 1-4 are required, members 5 and 6 are

optional

- Co-chairs may serve as either members 2, 3 or 6
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 6 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 6, but not as the external examiner

The only requirement with commonality with the proposal committee is the academic advisor, although it is expected that other members will carry forward to this committee.

Co-supervisors can be considered one of the above four members required, provided they come under the categories listed (i.e. meets the requirements of the position).

View a list of faculty and their affiliations here.

Computer Science (CS)

Aims and Scope

The Computer Science (CS) program educates students to become world-class researchers and thought leaders in the field of computer science. The program is designed to prepare students for a career in academia, industrial research or advanced positions in industry.

The program offers two degrees: the Doctor of Philosophy (Ph.D.) degree and the Master of Science (M.Sc.) degree. The M.Sc. degree can be obtained by taking courses only or by a combination of courses and writing a thesis. Students who are interested in a research career are encouraged to apply directly to the Ph.D. program. A master's degree is not a pre-requisite to enroll in the Ph.D. program.

Students who complete the Ph.D. degree will have demonstrated original research that is published in world-class prestigious conferences, journals and other research forums. This degree is appropriate for those who want to pursue a career in research either in academia or industry. Students who complete the M.Sc. degree by taking courses and writing a thesis will have demonstrated ability to perform directed research and complete a research project. This degree is appropriate for students who wish to pursue

a Ph.D. degree later.

Students who complete the M.Sc. degree by taking only courses will have demonstrated strong performance in graduate-level courses that prepares students for careers of advanced research and development in industry.

The scope of research in the computer science program at KAUST includes the following areas:

- Artificial Intelligence and Machine Learning
- Computational Biosciences
- Computer Systems and Databases
- High Performance Computing
- Theoretical Computer Science
- Visual Computing
- Cybersecurity and Dependability

Program Contacts

Aida Mizouni-Hoteit, Senior Graduate Education Specialist

More information can be found on the Computer Science website here.

Definitions

To describe the course requirements, we use the following terms:

A *200-level* course has a course number in the closed interval [200 – 299].

A *300-level* course has a course number in the closed interval [300 – 399].

The *course prefix* is the abbreviation at the beginning of a course number used to describe the program that offers the course, e.g., CS for computer science courses and ECE for electrical and computer engineering courses.

A *CS course* is a course with CS prefix. A *CEMSE* course is a course with a CS, AMCS, ECE, or STAT prefix. A *BESE/CEMSE/PSE* course is a course offered by any of the three divisions.

The term *regular course* excludes special courses such as:

- CS 295 Internship, CS 297 Master Thesis Research, CS 299 Directed Research, or similar courses in other

programs

- CS 397 Doctoral Dissertation Research, CS 398 Graduate Seminar, CS 399 Doctoral Directed Research, or similar courses in other programs
- Courses that CS students cannot take for credit, such as CS 207 Programming Methodology and Abstractions
- Courses with a ESL, IED, WE prefix

Note that special courses such as CS 294 Contemporary Topics and CS 394 Contemporary Topics are included in the definition of a regular course.

Requirements for All CS Students

All students have to fulfill the following requirements in addition to the requirements listed below:

- A minimum GPA of 3.0 must be achieved to graduate.
- Individual courses require a minimum of a B- for course credit.
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for the first two semesters at KAUST
- Completion of one Winter Enrichment Program (WEP)

A rule for all CS students is that any course choice needs to be approved by the academic advisor. The academic advisor should check if a course has an appropriate difficulty level and if it fits the educational mission of the CS program. Most importantly, taking courses offered outside of the CS program, especially outside the CEMSE division, requires some justification. Students should take such courses mainly to support an interdisciplinary research project.

Computer Science M.Sc. Program

The Master of Science (M.Sc.) degree is awarded upon successful completion of a minimum of 36 credit hours. Students are expected to complete the M.Sc. degree in three semesters (non-thesis option) or four semesters (thesis option). Satisfactory participation in every KAUST summer semester is mandatory. Summer semester courses are credit bearing and apply towards the degree.

The M.Sc. Requirements

- Core courses (9 credits)
- Elective courses (15 credits)
- Research/capstone experience (12 credits)

Core Courses (9 credits)

Core courses are all *regular CS 200-level courses* with the following exception:

- Special courses such as CS 294 Contemporary Topics

Elective Courses (15 credits)

Elective courses are regular 200-level and regular 300-level courses. The following rules apply:

- 3 credits have to be CS courses
- 6 credits have to be CEMSE courses
- 6 credits have to be BESE/CEMSE/PSE courses

Note that students can take 15 credits of CS courses to fulfill this requirement.

M.Sc. Thesis

The thesis defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than four members. At least two of the required members must be KAUST faculty. The chair plus one additional faculty member must be affiliated with the student's program. This membership can be summarized as:

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty or approved research scientist	Within or outside program
4	Additional faculty or research scientist	Inside or outside KAUST

Notes:

- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as member 2, 3, or 4, but may not be a research scientist
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve

as chair on any new committees

- Professors of practice and research professors may serve as members 2, 3 or 4 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 4

View a list of faculty and their affiliations here.

M.Sc. Non-Thesis

Students wishing to pursue the non-thesis option must complete a total of 12 capstone credits. All students must take exactly 6 credits of directed research (299).

Students must complete the remaining 6 credits through one or a combination of the options listed below:

- IED 210 Technology Innovation and Entrepreneurship
- IED 220 New Venture and Product Innovation Challenge
- CS 295 Internship
- Regular 300-level courses. One 300 level course can be a regular BESE/CEMSE/PSE course. An eventual second 300-level course has to be a regular CEMSE course.

Computer Science Ph.D. Program

The Doctor of Philosophy (Ph.D.) degree is designed to prepare students for research careers in academia and industry.

There is a minimum residency requirement at KAUST of three and a half years for students entering with a bachelor's degree and two and a half years for students entering with a master's degree. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit.

The Ph.D. degree includes the following steps:

- Securing a academic advisor
- Successful completion of program coursework
- Passing the qualifying examination
- Passing the dissertation proposal defense to obtain candidacy status

- Preparing, submitting and successfully defending a doctoral dissertation

Ph.D. Course Requirements

The required coursework varies for students entering the Ph.D. degree with a bachelor's degree or a relevant master's degree. Students holding a bachelor's degree must complete all program core/mandatory courses and elective courses outlined in the master's degree section and are also required to complete the Ph.D. courses below. Students entering with a bachelor's degree will qualify to earn a master's degree by satisfying the master's degree requirements.

Students entering the Ph.D. degree with a relevant master's degree must complete the requirements below, though additional courses may be required by the academic advisor and the qualifying exam.

Ph.D. Courses

- Two 300-level courses: one course can be a BESE/CEMSE/PSE course; one needs to be a CS course.

Ph.D. Qualifying Examination

The qualifying examination (qualifier) is course based. Students have to pass three courses to pass the qualifier using the following rules:

- One of the courses needs to have a grade of A- or A; two courses need to have a grade of B+ or better.
- All three courses need to be selected from eligible qualifier courses. The list of eligible qualifier courses is available on the CEMSE / CS webpages. The list sorts all eligible qualifier courses into several research areas. Students are not allowed to select more than one qualifier course from the same research area.
<https://cemse.kaust.edu.sa/cs/study#csprogram>
- The three courses need to be taught by three different faculty.
- Ph.D. students must pass the qualifier within a year of being formally registered as a Ph.D. student by the registrar according to university rules.
- If students fail to meet the qualifier requirements within a year, they will have failed the qualifier and be dismissed from the program.

Some additional details about the procedure of the qualifier:

- The KAUST Ph.D. program stipulates that students must take at least two 300 level courses during the Ph.D. candidacy. These two courses may be used as qualifier courses.
- Ph.D. students can use courses they completed before starting their Ph.D. as qualifier courses, e.g., courses taken while completing an M.Sc. from KAUST.
- No waiver will be given for any courses taken outside of KAUST.
- The list of eligible courses, the research areas, and the way the courses are sorted into research areas can change over time. Students have to choose courses and areas according to a single version of the course list: either the version of the eligible course list that was current at the time of the start of the Ph.D. or an eventual updated later version.
- As soon as students pass the qualifier, they should submit a filled out qualifier form to the GPC including a transcript. The qualifier form is available on the CEMSE / CS webpages. Upon verification, students will receive a confirmation that they passed the qualifier.

Ph.D. Candidacy

In addition to the coursework requirements, students must successfully complete the required Ph.D. candidacy milestones to progress towards Ph.D. candidate status. Once students have advanced to candidacy, students are designated as Ph.D. or doctoral candidates.

Ph.D. Proposal Defense Committee

The Ph.D. dissertation proposal defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than six members. The chair, plus one additional faculty member must be affiliated with the student's program.

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty	Outside program
4	Approved research scientist	Inside KAUST

Notes:

- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as members 2 or 3
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2 or 3 depending upon their affiliation with the student's program, they may also serve as co-chairs

Once constituted, the composition of the proposal committee can only be changed with the approval of both the academic advisor and the dean.

View a list of faculty and their affiliations here.

Ph.D. Final Defense Committee

The Ph.D. dissertation defense committee, which must be approved by the dean, must consist of at least four members and typically includes no more than six members. At least three of the required members must be KAUST faculty and one must be an external examiner who is external to KAUST. The chair, plus one additional faculty member must be affiliated with the student's program. The external examiner is not required to attend the defense, but must write a report on the dissertation and may attend the dissertation defense at the discretion of the program.

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty	Outside program
4	External examiner	Outside KAUST
5	Approved research scientist	Inside KAUST
6	Additional faculty	Inside or outside KAUST

Notes:

- Members 1-4 are required, members 5 and 6 are optional
- Co-chairs may serve as either members 2, 3 or 6
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 6 depending upon their affiliation with the student’s program, they may also serve as co-chairs
- Visiting professors may serve as member 6, but not as the external examiner

The only requirement with commonality with the proposal committee is the academic advisor, although it is expected that other members will carry forward to this committee.

Co-supervisors can be considered one of the above four members required, provided they come under the categories listed (i.e. meets the requirements of the position).

View a list of faculty and their affiliations here.

Electrical and Computer Engineering (ECE)

Aims and Scope

Electrical and Computer Engineering (ECE) plays an important role in the fields of engineering, applied physics and computational sciences. A significant portion of advancement in technology originates from cutting-edge research performed in the field of ECE. At KAUST the ECE program is bound to this tradition: it aims for

preparing students for a multitude of professional paths and advancing world-class research and research-based education through interdisciplinary partnering within engineering and science.

The ECE program encompasses technical areas of solid-state electronics, microsystems, electromagnetics, photonics, communication, networking, signal processing, computer vision, power electronics and control.

Program Contacts

Shehab Ahmed, Program Chair
 Rana Al Eryani, Graduate Program Student Advisor

Electrical and Computer Engineering M.Sc. Program

It is the responsibility of students to plan their graduate program in consultation with their academic advisor. Students are required to meet all deadlines. Students should be aware that most core courses are offered only once per year.

The Master of Science (M.Sc.) degree is awarded upon successful completion of a minimum of 36 credit hours. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit. Students are expected to complete the M.Sc. degree in three semesters. Satisfactory participation in every KAUST summer session is mandatory.

The M.Sc. Requirements

- Core courses (12 credits)
- Elective courses (12 credits)
- Research/capstone experience (12 credits)
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for the first two semesters
- Completion of one Winter Enrichment Program (WEP)

Core Courses (12 credits)

This portion of the degree is designed to provide students with the background needed to establish a solid foundation in the program area:

Core Courses:		
ECE 202	Analog Integrated Circuits	3
ECE 206	Device Physics	3

			Member	Role	Program Status
ECE 208	Semiconductor Optoelectronic Devices	3			
ECE 221	Electromagnetic Theory	3	1	Chair	Within program
ECE 231	Principles of Optics	3	2	Faculty	Within program
ECE 242	Digital Communication and Coding	3	3	Faculty or approved research scientist	Outside or inside program
ECE 245	Wireless Sensors and Sensor Networks	3	4	Additional faculty or research scientist	Inside or outside KAUST
ECE 251	Digital Signal Processing and Analysis	3			
ECE 263/ME 226	Cyber-Physical Systems				
ECE 271A/ME 221A	Linear Control Systems	3			
AMCS 211	Numerical Optimization	3			
AMCS 241/STAT 250	Stochastic Processes	3			
CS 204	Data Structures and Algorithms	3			
CS 244	Computer Networks	3			
CS 294	Contemporary Topics in Computer Science				

Notes:

- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as member 2, 3, or 4, but may not be a research scientist
- Members 2 and 3 must use primary affiliation only
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 4 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 4

View a list of faculty and their affiliations here.

M.Sc. Non-Thesis

Students wishing to pursue the non-thesis option must complete a total of 12 capstone credits, with a maximum of 6 credits of directed research (299).

Students must complete the remaining credits through one or a combination of the options listed below:

- Broadening experience courses: courses that broaden a student's M.Sc. experience (maximum 6 credits can be applied to master degree requirements)
- Internship: research-based summer internship (295) – students are only allowed to take one internship
- Ph.D. courses: courses numbered at the 300 level
- Directed research (299) – master's level supervised research (maximum 6 credits can be applied to master degree requirements)

Elective Courses (12 credits)

One additional elective course (3 credits) in ECE. Courses from any ECE track can be used to fulfill this requirement. Two additional courses (6 credits) from any 200- or 300-level course in any degree program at KAUST. If a core course is from AMCS or STAT, then this course can fulfill the applied mathematics/statistics requirement. In this case, the elective curriculum requirement would need to increase to four courses (12 credits). Course selection process, including core courses, applied mathematics/statistics requirement, and elective ECE courses, should be done with the consent of the academic advisor. Students must also register for ECE 398 (non-credit seminar course) for the first two semesters of the degree program.

The elective courses (which exclude research, internship credits, and IED courses) are designed to allow students to tailor their educational experience to meet individual research and educational objectives, with the permission of the academic advisor.

M.Sc. Thesis

The thesis defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than four members. At least two of the required members must be KAUST faculty. The chair plus one additional faculty member must be affiliated with the student's program. This membership can be summarized as:

Electrical and Computer Engineering Ph.D. Program

The Doctor of Philosophy (Ph.D.) degree is designed to prepare students for research careers in academia and industry.

There is a minimum residency requirement at KAUST of three and a half years for students entering with a bachelor’s degree and two and a half years for students entering with a master’s degree. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit.

The Ph.D. degree includes the following steps:

- Securing an academic advisor
- Successful completion of program coursework
- Passing the qualifying examination
- Passing the dissertation proposal defense to obtain candidacy status
- Preparing, submitting and successfully defending a doctoral dissertation

Ph.D. Course Requirements

The required coursework varies for students entering the Ph.D. degree with a bachelor’s degree or a relevant master’s degree. Students holding a bachelor’s degree must complete all program core/mandatory courses and elective courses outlined in the master’s degree section and are also required to complete the Ph.D. courses below. Students entering with a bachelor’s degree will qualify to earn a master’s degree by satisfying the master’s degree requirements.

Students entering the Ph.D. degree with a relevant M.Sc. degree must complete the requirements below, though additional courses may be required by the academic advisor.

Ph.D. Courses

- At least two 300-level courses
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for the first two semesters, students who completed seminars while earning the M.Sc. are not required to enroll for a second time during the Ph.D.
- Winter Enrichment Program (WEP) – students who

completed WEP while earning the M.Sc. are not required to enroll in a full WEP for a second time during the Ph.D.

Ph.D. Candidacy

In addition to the coursework requirements, students must successfully complete the required Ph.D. candidacy milestones to progress towards Ph.D. candidate status. These milestones consist of the subject-based qualifying examination and Ph.D. proposal defense. Once students have advanced to candidacy, students are designated as Ph.D. or doctoral candidates.

Students have up to two attempts to pass the Ph.D. qualifying exam, which must be taken within the first year of their Ph.D. studies.

Ph.D. Proposal Defense Committee

The Ph.D. dissertation proposal defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than six members. The chair, plus one additional faculty member must be affiliated with the student’s program.

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty	Outside program
4	Approved research scientist	Inside KAUST

Notes:

- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as members 2 or 3
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2 or 3 depending upon their affiliation with the student’s program, they may also serve as co-chairs

Once constituted, the composition of the proposal committee can only be changed with the approval of both

the academic advisor and the dean.

View a list of faculty and their affiliations here.

Ph.D. Final Defense Committee

The Ph.D. dissertation defense committee, which must be approved by the dean, must consist of at least four members and typically includes no more than six members. At least three of the required members must be KAUST faculty and one must be an external examiner who is external to KAUST. The chair, plus one additional faculty member must be affiliated with the student's program. The external examiner is not required to attend the defense, but must write a report on the dissertation and may attend the dissertation defense at the discretion of the program.

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty	Outside program
4	External examiner	Outside KAUST
5	Approved research scientist	Inside KAUST
6	Additional faculty	Inside or outside KAUST

Notes:

- Members 1-4 are required, members 5 and 6 are optional
- Co-chairs may serve as either members 2, 3 or 6
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 6 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 6, but not as the external examiner

The only requirement with commonality with the proposal committee is the academic advisor, although it is expected that other members will carry forward to this committee.

Co-supervisors can be considered one of the above four members required, provided they come under the categories listed (i.e. meets the requirements of the

position).

View a list of faculty and their affiliations here.

Statistics (STAT)

Aims and Scope

The Statistics (STAT) program educates students to analyze and model complex real-world problems arising in modern statistical data science. Two degrees are offered: the M.Sc. degree (under either a thesis or a non-thesis option) and the Ph.D. degree. Admission to one degree does not guarantee transfer to another. All students in the M.Sc. and Ph.D. programs are guided by an academic advisor to develop their program of study.

Program Contacts

Hernando Ombao, Program Chair
Aida Mizouni-Hoteit, Senior Graduate Education Specialist

More information can be found on the Statistics program website here.

Statistics M.Sc. Program

Assessment Test

Students are admitted to KAUST from a wide variety of programs and backgrounds. To facilitate the design of an appropriate study plan for each individual student, all admitted students without an M.Sc. are required to take a written assessment exam when they arrive on campus. The purpose of the assessment is to determine whether students have mastered the prerequisites for undertaking graduate-level courses taught in the program. The academic advisor works with admitted students to develop a study plan if needed. Students are encouraged to prepare for the assessment by refreshing the general knowledge gained from their undergraduate education before arriving at KAUST. The study plan requirements must be satisfactorily completed, in addition to the university degree requirements. The topics covered by the assessment test are: calculus of one and multiple variables, linear algebra, probability, and statistics, at an undergraduate level.

It is the responsibility of students to plan their graduate program in consultation with their academic advisor. Students are required to meet all deadlines. Students should be aware that most core courses are offered only once per year.

The Master of Science (M.Sc.) degree is awarded upon successful completion of a minimum of 36 credit hours. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit. Students are expected to complete the M.Sc. degree in three semesters. Satisfactory participation in every KAUST summer session is mandatory.

The M.Sc. Requirements

- Core courses (12 credits)
- Elective courses (12 credits)
- Research/capstone experience (12 credits)
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for the first two semesters
- Completion of one Winter Enrichment Program (WEP) – typically during the first year of enrollment

Core Courses (12 credits)

Students enrolled toward the M.Sc. degree are required to complete the following 12 credits of core courses:

STAT 220	Probability and Statistics	3
STAT 230	Linear Models	3
STAT 240	Bayesian Statistics	3
STAT 250	Stochastic Processes	3

The core courses are designed to cover the basic skills and competencies that are expected of students holding an advanced degree. STAT 220, STAT 230, STAT 250 are part of the Ph.D. qualifying examination.

Elective Courses (12 credits)

The elective courses (which exclude research, internship credits, and IED courses) are designed to allow students to tailor their educational experience to meet individual research and educational objectives, with the permission of the academic advisor.

Students enrolled toward the M.Sc. degree are required to complete 12 credits of elective courses. Courses from other programs can be taken as elective courses as agreed with the academic advisor. Relevant courses from faculty affiliated to the STAT program are listed below (but not limited to):

AMCS 206	Applied Numerical Methods	3
AMCS 211	Numerical Optimization	3
AMCS 308	Stochastic Numerics with Application in Simulation and Data Science	3

AMCS 336	Numerical Methods for Stochastic Differential Equations	3
AMCS 350	Spectral Methods for Uncertainty Quantification	3
CS 207	Programming Methodology and Abstractions	3
CS 220	Data Analytics	3
CS 229	Machine Learning	3
CS 320	Probabilistic Graphical Models	3
CS 331	Stochastic Gradient Descent Methods	3
CS 340	Computational Methods in Data Mining	3
CS 394	Contemporary Topics in Computer Science	3
ECE 242	Digital Communication and Coding	3
ECE 251	Digital Signal Processing and Analysis	3
ECE 341	Information Theory	3
ECE 353	Adaptive Signal Processing	3
ECE 354	Introduction to Computer Vision	3
ECE 355	Estimation, Filtering and Detection	3
ErSE 213	Inverse Problems	3
ErSE 253	Data Analysis in Geosciences	3
ErSE 353	Data Assimilation	3

Note: For STAT students, STAT 210 can only be taken on a pass/fail basis. Moreover, at most one course among AMCS 201, AMCS 202, AMCS 206 can be taken on a letter grade basis with approval of the academic advisor (students must declare that at the beginning of the semester at the time of registration). STAT Ph.D. students cannot take any of the STAT 210, AMCS 201, AMCS 202, AMCS 206 courses on a letter grade basis.

M.Sc. Thesis

The thesis defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than four members. At least two of the required members must be KAUST faculty. The chair plus one additional faculty member must be affiliated with the student’s program. This membership can be summarized as:

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty	Outside program, inside KAUST
4	Additional faculty or research scientist	Inside or outside KAUST

Notes:

- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as member 2, 3, or 4, but may not be a research scientist
- Members 2 and 3 must use primary affiliation only
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 4 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 4

View a list of faculty and their affiliations here.

M.Sc. Non-Thesis

Students wishing to pursue the non-thesis option must complete a total of 12 capstone credits, with a maximum of 6 credits of directed research (STAT 299).

Students must complete the remaining credits through one or a combination of the options listed below:

- Broadening experience courses: courses that broaden a student's M.Sc. experience
- Internship: research-based summer internship (295) – students are only allowed to take one internship
- Ph.D. courses: courses numbered at the 300 level

Statistics Ph.D. Program

The Doctor of Philosophy (Ph.D.) degree is designed to prepare students for research careers in academia and industry.

There is a minimum residency requirement at KAUST of

three and a half years for students entering with a bachelor's degree and two and a half years for students entering with a master's degree. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit.

The Ph.D. degree includes the following steps:

- Securing an academic advisor
- Successful completion of program coursework
- Passing the qualifying examination
- Passing the dissertation proposal defense to obtain candidacy status
- Preparing, submitting and successfully defending a doctoral dissertation

Ph.D. Course Requirements

The required coursework varies for students entering the Ph.D. degree with a bachelor's degree or a relevant master's degree. Students holding a bachelor's degree must complete all program core/mandatory courses and elective courses outlined in the master's degree section and are also required to complete the Ph.D. courses below. Students entering with a bachelor's degree will qualify to earn a master's degree by satisfying the master's degree requirements.

Students entering the Ph.D. degree with a relevant M.Sc. degree must complete the requirements below, though additional courses may be required by the academic advisor.

Ph.D. Courses

- At least four courses of which at least two must be from the STAT 300 level course list. Courses have to be approved by the academic advisor. Core courses, 100-level courses, or courses taken during and used toward the M.Sc. degree cannot be used to fulfill this requirement.
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for the first two semesters
- Winter Enrichment Program (WEP) – students who completed WEP while earning the M.Sc. are not required to enroll in a full WEP for a second time during the Ph.D.

Ph.D. Candidacy

In addition to the coursework requirements, students must successfully complete the required Ph.D. candidacy milestones to progress towards Ph.D. candidate status. These milestones consist of the subject-based qualifying examination and Ph.D. proposal defense. Once students have advanced to candidacy, students are designated as Ph.D. or doctoral candidates.

Subject-Based Qualifying Examination

The qualifying exam consists of three written subject exams, one in each of the core courses STAT 220, STAT 230, STAT 250. It is given twice per year: during the final exams of the fall semester and immediately after the final exams of the spring semester, or as feasible. The fall semester qualifying exam is the final exam of each of the core courses given during the fall semester. The spring semester exam is a 3-hour exam per subject prepared by the faculty teaching the core courses. The exams are given over the course of a few days in both spring and fall.

Students are encouraged to take all three (3) qualifiers in their first semester of the Ph.D. program. Students have two chances to take each exam and can retake only those exams they did not pass. They are required to pass all three qualifying exams within one year. No extension is given except under extenuating circumstances. Each exam is passed if students obtain a score of at least 70% in that exam. If students at the end of the first year of Ph.D. have only passed 2 out of 3 qualifiers then the case is reviewed by the qualifying exam committee and it is decided if students can proceed with the Ph.D. For more details related to the Ph.D. qualifying exam, contact the STAT program coordinator.

It is the responsibility of students to inform the dissertation defense committee of their progress, deadlines for submitting graduation forms, the defense date, etc. It is required that students submit their dissertation to the STAT program coordinator nine weeks prior to the defense date in order to receive feedback from the committee members in a timely manner.

Note: M.Sc./Ph.D. students who pass the final exam of a qualifying exam course with a score of 70% or higher during their M.Sc. do not have to retake that exam during their Ph.D. as a qualifying exam. Moreover, exams taken during the M.Sc. do not count towards the two attempts, provided these correspond to courses in which students are enrolled. Students can choose to take the final exam for a course in which they are not enrolled. In that case, the exam counts towards the two attempts. The deadline to

pass all qualifying exams is unchanged, one year after starting the Ph.D. regardless of the qualifying exams passed during the M.Sc.

Ph.D. Proposal Defense Committee

The Ph.D. dissertation proposal defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than six members. The chair, plus one additional faculty member must be affiliated with the student's program.

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty	Outside program, inside KAUST
4	Additional faculty or research scientist	Inside or outside KAUST

Notes:

- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as members 2 or 3
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2 or 3 depending upon their affiliation with the student's program, they may also serve as co-chairs

Once constituted, the composition of the proposal committee can only be changed with the approval of both the academic advisor and the dean.

View a list of faculty and their affiliations [here](#).

Ph.D. Final Defense Committee

The Ph.D. dissertation defense committee, which must be approved by the dean, must consist of at least four members and typically includes no more than six members. At least three of the required members must be KAUST faculty and one must be an external examiner who is external to KAUST. The chair, plus one additional faculty member must be affiliated with the student's program. The external examiner is not required to attend the defense, but must write a report on the dissertation and may attend the dissertation defense at the discretion of the program.

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty	Outside program, inside KAUST
4	External examiner	Outside KAUST
5	Approved research scientist	Inside KAUST
6	Additional faculty	Inside or outside KAUST

Notes:

- Members 1-4 are required, members 5 and 6 are optional
- Co-chairs may serve as either members 2, 3 or 6
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 6 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 6, but not as the external examiner

The only requirement with commonality with the proposal committee is the academic advisor, although it is expected that other members will carry forward to this committee.

Co-supervisors can be considered one of the above four members required, provided they come under the categories listed (i.e. meet the requirements of the position).

View a list of faculty and their affiliations [here](#).

Division of Physical Science and Engineering (PSE)

The mission of the Physical Science and Engineering (PSE) division is to create knowledge pertaining to matter at all scales (nano, meso, macro) and in all forms (from bulk to divided colloids to fluids) and to seek understanding of the interaction of matter with external stimuli to design new materials/technologies addressing the issues of our times.

Research in the division has three main focus areas: energy (including alternative energy), environmental sustainability, and advanced components. These research thrusts are addressed through various research themes, like catalysis, photovoltaics, new materials, membranes, porous materials, nano-composites, mechanics, spintronics and advanced opto-electronics, complex fluids, clean combustion, geophysics, climate & atmospheric studies, enhanced oil recovery, CO₂ sequestration.

Research in the PSE division is driven by independent faculty labs and five research centers with which faculty can affiliate to perform applied, goal-oriented research. Centers affiliated with the division include:

- Advanced Membranes and Porous Materials Research Center (AMPMC)
- Ali I. Al-Naimi Petroleum Engineering Research Center (ANPERC)
- Clean Combustion Research Center (CCRC)
- KAUST Catalysis Center (KCC)
- KAUST Solar Center (KSC)

Division Contacts

Ravi Samtaney, Dean
Udo Schwingenschloegl, Associate Dean of Students

More information can be found on the PSE website here.

PSE Programs

Applied Physics (AP)

Aims and Scope

Faculty and students in the Applied Physics (AP) program at KAUST engage in interdisciplinary research at the

interface between fundamental physical concepts and cutting-edge technologies. They strive for exploiting basic physical phenomena at the meso- and nanoscale to design innovative solutions in several applied physics specialties, such as optics and photonics, semiconductor devices, quantum electronics, and novel materials for energy applications.

The AP program for both M.Sc. and Ph.D. students aims at providing firm knowledge on basic science to apprehend the physics taking place at the meso- and nanoscale, and tools to apply this knowledge to nurture technological and scientific breakthroughs in applied physics. The program focuses on device physics, photonics, and quantum electronics. Students in this program receive broad training in basic scientific concepts in condensed matter physics, quantum mechanics, electrodynamics, and statistical physics. Students participate in scientific research activities that may include laboratory studies and computational modeling. Ph.D. candidates focus on original research driven to advance the boundaries of knowledge. Employability of AP graduates ranges from academic research institutions to R&D positions in high-tech industrial or entrepreneurial environments.

Program Contacts

Udo Schwingenschloegl, Program Chair
Mazen Mero, Graduate Student Advisor

Applied Physics M.Sc. Program

The Master of Science (M.Sc.) degree is awarded upon successful completion of a minimum of 36 credit hours with a minimum of 3.0 cumulative GPA. Individual courses require a minimum of a B- for course credit. Students are expected to complete the M.Sc. degree in four semesters. Satisfactory participation in every KAUST summer semester is mandatory.

It is the sole responsibility of students to plan their graduate program in consultation with their academic advisor. Students should be aware that most core courses are offered only once per year.

M.Sc. Degree Requirements

The M.Sc. degree has the following components:

- Core courses (12 credits)
- Elective courses (12 credits)
- Graduate seminar (AP 398) (non-credit)
- Completion of one Winter Enrichment Program (WEP)
- Research/capstone experience (12 credits)

Core Courses (12 credits)

The AP core courses are designed to provide students with the background needed to establish a solid foundation in the program area. M.Sc. students are required to complete 12 credits (four courses) to fulfill the core requirements. Students must take the following four courses:

AP Core Courses

AP 220	Statistical Physics	3
AP 228	Advanced Quantum Mechanics	3
ECE 221	Electromagnetic Theory	3
MSE 225	Electronic Properties of Materials	3

Elective Courses (12 credits)

The elective courses are designed to allow students to tailor their educational experience to meet individual research and educational objectives with the permission of the academic advisor. Electives can be selected from either AP or any other related program.

The following list of courses contains those courses most appropriate to complete the AP degree, organized by themes. Students may select four courses from any 200 or 300 level courses. Research credits, internship credits, and IED courses will not count toward electives.

Fundamentals in Physics

AP 230	Condensed Matter Physics	3
MSE 226	Thermodynamics of Materials	3
MSE 227	Applied Quantum Mechanics	3

Experimental Techniques and Characterization

ECE 203	Solid-State Devices Fabrication	3
AP 210	Spectroscopy of Solids	3
ME 348	Introduction to Spectroscopy and Laser Diagnostics	3
MSE 228	Materials Characterization	3

Materials

ME 317	Mechanics of Composite	3
--------	------------------------	---

MSE 229	Materials and Structures	3
MSE 310	Polymeric Materials	3
MSE 318	Energy Storage Materials and Devices	3
MSE 320	Nanomaterials	3
MSE 322	Materials and Devices for Energy Conversion	3
MSE 324	Semiconductor Materials	3
	Photophysics of Organic Semiconductors	3

Device Physics

AP 320	Introduction to Nanoelectronics	3
ECE 206	Device Physics	3
ECE 306	Electronic and Optical Properties of Semiconductors	3

Optoelectronics and Photonics

ECE 208	Semiconductor Optoelectronic Devices	3
ECE 231	Principles of Optics	3
ECE 332	Optical Waves in Crystals	3

Theoretical and Computational Physics

AMCS 201	Applied Mathematics I	3
AMCS 202	Applied Mathematics II	3
AMCS 231	Applied Partial Differential Equations I	3
AMCS 252	Numerical Analysis of Differential Equations	3
AMCS 255	Advanced Computational Physics	3
AMCS 331	Applied Partial Differential Equations II	3
AMCS 353	Advanced Topics in Wave Propagation	3
AP 330	Many-Body Theory in Condensed Matter	3
CS 229	Machine Learning	3
ME 305A	Computational Fluid Dynamics	3
ME 305B	Advanced Computational Fluid Dynamics	3
ME 319	Computational Solid Mechanics	3
MSE 314	Ab-Initio Computational Methods	3

Graduate Seminar (AP 398)

M.Sc. students are required to register in three AP graduate seminars and receive a satisfactory grade to fulfill the seminar requirements for M.Sc. degree.

Winter Enrichment Program

Students are required to satisfactorily complete at least one full Winter Enrichment Program (WEP).

Research/Capstone Experience (12 credits)

Designation of Academic Advisor

The first step for students is to identify an M.Sc. academic (thesis) advisor. Students are required to select a faculty member affiliated with the program to supervise the thesis research. The list of AP-affiliated faculty members is available on the Applied Physics program main page, click [here](#).

Students may choose to conduct thesis research with a non-affiliated faculty member. The potential non-affiliated academic (thesis) advisor must request the program's approval to become a project-affiliated advisor for the specific thesis project before commencing the research work.

Thesis Credits Registration

Students are required to complete a minimum of 12 credits of thesis research (AP 297). Students are permitted to register for more than 12 credits of M.Sc. thesis research as necessary and with the permission of the academic (thesis) advisor.

M.Sc. Thesis Timeline and Extension

M.Sc. students and their academic advisors need to define the thesis timeline at the time the thesis application is submitted. Students are expected to complete the M.Sc. thesis degree requirements by the end of their second fall semester (third semester).

M.Sc. students may apply to extend into the spring semester (fourth semester) by submitting the request for extension to complete the M.Sc. thesis.

Thesis Defense and Submission

M.Sc. students are expected to form a thesis examination committee, submit a written thesis document, and defend their thesis to complete the thesis research requirements.

M.Sc. Thesis Committee Formation

Once the thesis is ready to be examined/defended, students have to form the thesis examination committee and set the date for the oral defense.

Students are required to submit the thesis formation

committee form at the beginning of the semester in which they intend to defend their thesis.

Thesis Committee Members Selection Criteria

The thesis defense committee must consist of at least three members and typically includes no more than four members as:

Member	Role	Program Status
1	Committee Chair	Affiliated faculty member
2	KAUST faculty	Affiliated faculty member
3	KAUST faculty	Non-affiliated faculty member
4	Additional faculty or research scientist	Inside or outside KAUST

Notes:

- Members 1-3 are required, member 4 is optional
- Member 1: committee chair must be an AP faculty member or a KAUST faculty member affiliated with AP program
- Member 2: must be an AP faculty member
- Member 3: KAUST faculty member not affiliated with the program
- Co-chairs may serve as member 2, 3, or 4, but may not be a research scientist
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 4 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 4

Thesis Defense

An oral defense of the M.Sc. thesis is required, although it may be waived by the dean's office under exceptional circumstances. Public presentation and all other details related to the format of the oral defense are left to the discretion of the thesis committee.

The oral thesis defense must be completed two weeks

before the last day of classes of the graduating semester. Students must set the date of the thesis defense with the committee members by the time students submit their thesis committee formation form.

Thesis Document

Students must follow the KAUST Thesis and Dissertation Guidelines available on the KAUST Library website when they write their thesis.

The division urges students to submit the thesis to the examining committee no later than two weeks prior to the defense. However, the committee chair sets the final requirement for the submission timeline.

Thesis Defense Evaluation

Students defending their thesis will receive one of these two outcomes, pass or fail. A pass is achieved when the committee agrees with no more than one dissenting vote, otherwise the outcome is a fail.

In case of a pass, students are required to send a copy of the M.Sc. thesis approval form within two days after the thesis defense to the GPC.

In the case of a fail, the academic (thesis) advisor must inform the GPC immediately to take the necessary action.

Applied Physics Ph.D. Program

The Doctor of Philosophy (Ph.D.) degree is designed to prepare students for research careers in academia and industry. It is offered exclusively as a full-time program.

There is a minimum residency requirement at KAUST of three and a half years for students entering with a bachelor's degree and two and a half years for students entering with a master's degree. A minimum GPA of 3.0 must be achieved to graduate.

The Ph.D. degree includes the following steps:

- Securing an academic advisor
- Successful completion of program coursework
- Passing the qualifying exam
- Passing the dissertation proposal defense to obtain candidacy status
- Preparing, submitting, and successfully defending a doctoral dissertation

Designation of Academic Advisor

The academic advisor must be a full-time program-affiliated assistant, associate or full professor at KAUST. The list of faculty members affiliated with AP program is available on the program website.

Students may also select a non-affiliated advisor from another program at KAUST. The academic advisor may request to become a project-affiliated advisor for the specific dissertation project with program level approval. Project affiliation approval must be completed prior to commencing research.

Ph.D. Course Requirements

The required coursework varies for students entering the Ph.D. degree with a bachelor's degree or a relevant master's degree. Students holding a bachelor's degree must complete all program core/mandatory courses and elective courses outlined in the master's degree section and are also required to complete the Ph.D. courses below. Students entering with a bachelor's degree will qualify to earn a master's degree by satisfying the master's degree requirements.

Students entering the Ph.D. degree with a relevant master's degree must complete the requirements below, though additional courses may be required by the academic advisor.

Ph.D. Courses

- Students entering KAUST with a relevant master's degree must complete at least four courses, two of which must be 300-level courses. Students entering KAUST with a bachelor's degree are required to take two 300-level courses in addition to the M.Sc. degree coursework requirements. Individual courses require a minimum of a B- for course credit.
- Graduate seminar AP 398 (non-credit) – all students are required to register and receive a satisfactory grade for four semesters of the program's graduate seminar.
- Winter Enrichment Program (WEP) – students are required to satisfactorily complete at least one full Winter Enrichment Program (WEP). Students who completed WEP while earning the M.Sc. are not required to enroll in a full WEP for a second time during the Ph.D.

Students entering the program with an M.Sc. degree from KAUST may transfer unused coursework toward the Ph.D.

program requirements subject to program level approval. Students transferring from another university's Ph.D. program may receive some dissertation research and coursework credit on a case-by-case basis for related work performed at the original institution upon approval by the dean. However, such students must still satisfy the qualifying exam and dissertation proposal defense requirements at KAUST.

Ph.D. Candidacy

In addition to the coursework requirements, students must successfully complete the required Ph.D. qualification milestones to progress towards Ph.D. candidacy status. These milestones consist of the subject-based qualifying exam and Ph.D. proposal defense.

Ph.D. Qualifying Exam

The purpose of the subject-based qualifying exam is to test students' knowledge of the subject matter within the field of study.

All students entering the Ph.D. program with a bachelor's degree must take this exam within two years of their admission. Students admitted to the program with a master's degree must take this exam within one year.

The requirements to complete the AP qualifying exam are available on AP academics webpage.

Ph.D. Dissertation Proposal

The dissertation proposal defense is the second part of the qualification milestones that must be completed to become a Ph.D. candidate. The purpose of the dissertation proposal defense is to demonstrate that students have the ability and are adequately prepared to undertake Ph.D. level research in the proposed area. This preparation includes necessary knowledge of the chosen subject, a review of the literature, and preparatory theory or experiments as applicable.

Ph.D. students are required to complete the dissertation proposal defense within one year after passing the qualifying exam. The proposal defense date will be determined by students and their academic advisor.

Ph.D. students are expected to form the Ph.D. dissertation proposal defense committee and present the dissertation proposal.

Formation of Ph.D. Proposal Defense Committee

Ph.D. students must submit the request to form the dissertation committee and present a Ph.D. proposal two weeks prior to the Ph.D. proposal defense date.

The Ph.D. dissertation proposal defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than five members. The criteria to select the committee members are as follows:

Member	Role	Program Status
1	Chair	Affiliated faculty member
2	Faculty	Affiliated faculty member
3	Faculty	Non-affiliated faculty member
4	Faculty	Inside KAUST (optional)
5	Faculty	Inside or outside KAUST (optional)

Notes:

- Members 1-3 are required, members 4 and 5 are optional
- Co-chairs may serve as members 2 or 3
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2 or 3 depending upon their affiliation with the student's program, they may also serve as co-chairs

Once constituted, the composition of the proposal committee can only be changed with the approval of both the academic advisor and the dean.

Ph.D. Dissertation Proposal Defense

The dissertation proposal defense includes two aspects: a written research proposal and an oral research proposal defense.

There are four possible outcomes of the dissertation proposal defense:

- Pass
- Pass with conditions
- Retake
- Fail without retake

A pass is achieved when the committee agrees with no more than one dissenting vote. In the instance of a pass with conditions, the entire committee must agree on the

required conditions and if they cannot, the dean decides. The deadline to complete the conditions is three months after the defense date, unless the committee unanimously agrees to change it. In the instance of a fail without retake, the decision of the committee must be unanimous. Students who fail without retake or who fail the retake will be dismissed from the University.

The outcome of the Ph.D. dissertation proposal defense is recorded by submitting the Ph.D. dissertation proposal evaluation form within three days after the proposal defense date.

Ph.D. Dissertation Final Defense

The Ph.D. dissertation defense is the final milestone of the degree. Ph.D. students are required to complete the following to earn the degree:

- Form Ph.D. dissertation committee and petition to defend Ph.D. dissertation
- Defend Ph.D. dissertation
- Submit Ph.D. dissertation

Petition to Defend Ph.D. Dissertation and Formation of Dissertation Committee

Students must determine the defense date with agreement of all members of the dissertation committee, meet deadlines for submitting graduation forms, and inform the committee of their progress. It is the responsibility of students to submit the required documents in consultation with the GPC and the academic advisor at the beginning of the semester they intend to defend, or at least two months before the date of the final planned defense date. The required documents include (i) the list of proposed committee members, including the external examiner (and a CV of the external examiner), (ii) a current CV of the student, (iii) a current transcript, (iv) a list of publications, and (v) a final draft of the Ph.D. dissertation. It is also expected that students submit their dissertation to the committee about the same time as submitting the petition form.

Formation of Ph.D. Final Defense Committee

The Ph.D. dissertation defense committee, which must be approved by the dean, must consist of at least four members, one of which must be an external to KAUST, and typically includes no more than six members. At least three of the required members must be KAUST faculty and one must be an examiner who is external to KAUST. The chair, plus one additional faculty member, must be

affiliated with the student's program. The external examiner is not required to attend the defense, but must write a report on the dissertation, assessing the quality of the research and scientific maturity of the student and including recommendations and questions prior to the final defense. The external examiner may attend the dissertation defense at the discretion of the program.

The criteria to select the committee members are as follows:

Member	Role	Program Status
1	Chair	Affiliated faculty member
2	Faculty	Affiliated faculty member
3	Faculty	Non-Affiliated faculty member
4	External examiner	Outside KAUST
5	Approved research scientist	Inside KAUST (optional)
6	Additional faculty	Inside or outside KAUST (optional)

Notes:

- The chair cannot be the academic advisor of the student
- Members 1-4 are required, members 5 and 6 are optional
- Co-chairs may serve as either members 2, 3 or 6
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 6 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 6, but not as the external examiner

The only requirement with commonality with the proposal committee is the academic advisor, although it is expected that other members will carry forward to this committee.

Co-supervisors can be considered one of the above four members required, provided they come under the categories listed (i.e. meets the requirements of the

position).

View a list of faculty and their affiliations here.

Ph.D. Dissertation Defense

The Ph.D. dissertation final defense is a public presentation that consists of an oral defense followed by Q&A and committee examination. The defense may last a maximum of three hours.

There are four possible outcomes of the dissertation final defense:

- Pass
- Pass with conditions
- Retake
- Fail without retake

A pass is achieved when the committee agrees with no more than one dissenting vote. In the instance of a pass with conditions, the entire committee must agree on the required conditions, and if they cannot, the dean decides. The deadline to meet conditions is three months after the defense date, unless the committee unanimously agrees to reduce it. If the conditions will take three months or more, or more than one member casts a negative vote, one retake of the defense is permitted. The deadline to complete the retake is as decided by the defense committee with a maximum of six months after the defense date, unless the committee unanimously agrees to change it. Students who fail without retake or who fail the retake will be dismissed from the University.

Evaluation of the Ph.D. dissertation defense is recorded by submitting the result of Ph.D. dissertation defense form to the Office of the Registrar by the deadline in the Academic Calenda (p. 5)r.

Ph.D. Dissertation Submission

Students are required to follow the KAUST Thesis and Dissertation Guidelines available on KAUST Library website when they write their dissertation.

Students may seek the help of the Writing Center for editorial assistance while writing their dissertation. Students can book a time by sending an email to Skills Lab, skillslab@kaust.edu.sa.

Once the post-examination corrections required by the dissertation committee and the format of the dissertation have been checked and finalized, Ph.D. students must

submit the final draft of the dissertation to the program to conclude the submission process.

Chemical Engineering (CE)

Aims and Scope

The Chemical Engineering (CE) program aims to offer students opportunities to develop real-world solutions to global challenges by performing rigorous coursework studies and cutting-edge research in chemical engineering and biological engineering. These include the development of new materials and processes for gas and liquid separations, for water desalination, catalysis, sustainable energy and nanotechnology as well as the advancement of new ideas in process design and control and reactor design.

Program Contacts

Ingo Pinnau, Program Chair
Linda Sapolu, Graduate Student Advisor

Chemical Engineering M.Sc. Program

It is the responsibility of students to plan their graduate program in consultation with their academic advisor. Students are required to meet all deadlines. Students should be aware that most core courses are offered only once per year.

The Master of Science (M.Sc.) degree is awarded upon successful completion of a minimum of 36 credit hours. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit. Students are expected to complete the M.Sc. degree in three to four semesters. Satisfactory participation in every KAUST summer session is mandatory.

The M.Sc. Requirements

- Core courses (12 credits)
- Elective courses (12 credits)
- Research/capstone experience (12 credits)
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for every semester of the program they attend
- Completion of one Winter Enrichment Program (WEP)
- Completion of M.Sc. thesis

Core Courses (12 credits)

To complete these twelve credit hours in CE, students should register for four core courses as listed below.

CE 201	Chemical Thermodynamics	3
CE 202	Advanced Transport Phenomena	3
CE 203	Advanced Reaction Engineering	3
CE 336	Membrane Science and Membrane Separation Processes	3

These core courses are designed to provide students with the background needed to establish a solid foundation in the program area.

Elective Courses (12 credits)

The elective courses (which exclude research, internship credits, and IED courses) are designed to allow students to tailor their educational experience to meet individual research and educational objectives, with the permission of the academic advisor.

Graduate Seminar

Attendance to all scheduled CE seminars is mandatory.

M.Sc. Thesis

The thesis defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than four members. At least two of the required members must be KAUST faculty. The chair plus one additional faculty member must be affiliated with the student's program. This membership can be summarized as:

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty	Outside program, Inside KAUST
4	Additional faculty or research scientist	Inside or outside KAUST

Notes:

- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as member 2, 3, or 4, but may not be a research scientist
- Members 2 and 3 must use primary affiliation only

- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 4 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 4

View a list of faculty and their affiliations here.

Chemical Engineering Ph.D. Program

The Ph.D. degree includes the following major steps (typical deadlines are specified below):

1. Securing an academic advisor
2. Successful completion of program coursework
3. Passing the qualifying examination
4. Passing the dissertation proposal defense to obtain candidacy status
5. Preparing, submitting and successfully defending a doctoral dissertation

KAUST requires a minimum residence time for Ph.D. graduates of 3.5 years for students entering with a bachelor's degree, and 2.5 years for students entering with a master's degree. Correspondingly, the required coursework may change, depending on whether or not students enter the Ph.D. with a bachelor's or master's in the chosen field of study at KAUST.

Designation of Ph.D. Academic Advisor

The academic advisor is assigned to students upon admission. Academic advisors must be fulltime program-affiliated assistant, associate or full professors at KAUST. Students may also select an advisor from another program at KAUST. This advisor can only become project-affiliated for the specific dissertation project with program level approval. Project-affiliation approval must be completed prior to commencing research.

Ph.D. Course Requirements

The required coursework varies for students entering the Ph.D. Degree with a bachelor's degree or a relevant master's degree. Students holding a bachelor's degree must complete all program core/mandatory courses and elective courses outlined in the master's degree section and are also

required to complete the Ph.D. courses below. Students entering with a bachelor's degree may also qualify to earn a master's degree by satisfying the master's degree requirements; however, it is student's responsibility to declare their intentions to graduate with a master's.

Students entering the Ph.D. degree with a relevant master's degree must complete the requirements below, though additional courses may be required by the academic advisor. Students entering the Ph.D. degree with a master's degree outside of chemical engineering must complete the requirements below, and all program core/mandatory courses outlined in the master's degree section, as well as additional courses required by the academic advisor. Attendance to all scheduled CE seminars is mandatory.

Ph.D. Courses

- Two 300-level courses in CE
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for every semester the program requires they attend
- Winter Enrichment Program – students are required to satisfactorily complete at least one full Winter Enrichment Program (WEP) as part of the degree requirements. Students who completed WEP requirements while earning a master's degree are not required to enroll in a full WEP for a second time in the Ph.D. degree.

Students entering the program with an M.Sc. from KAUST may transfer unused coursework toward the Ph.D. program requirements, subject to program level approval. Students transferring from another university's Ph.D. program may receive some dissertation research and coursework credit (not more than six credits) on a case-by-case basis for related work performed at the original Institution upon approval by the dean. However, such students must still satisfy the qualifying exam and dissertation proposal defense requirements at KAUST.

Ph.D. Candidacy

In addition to the coursework requirements, students must successfully complete the following required Ph.D. qualification milestones to progress towards Ph.D. candidacy status. These milestones consist of the subject-based qualifying examination and the Ph.D. dissertation proposal defense.

Ph.D. Qualifying Exam

Once students successfully complete the coursework requirements (typically within their first Ph.D.-year at KAUST), they can register for the qualifying exam (Q.E.).

The exam will be carried out twice a year. Typically, during the first week of the Fall semester, and the other at the beginning during the first week of the spring semester.

Ph.D. students with a bachelor's degree or master's degree out of the CE program are recommended to take the Q.E. after one full academic year of studies, and must accomplish all three Q.E. exams at the end of their second academic year. Ph.D. students with a master's degree in the CE program can take the Q.E. exam at any time when it is available, and must accomplish all three Q.E. exams at the end of the second academic year.

The Q.E. exam will be announced by the CE curriculum committee two months in advance. Students who wish to attend the exam need to register for the exam through their GPC and must be approved by the CE curriculum committee.

CE Q.E. exam includes three subjects: transport phenomena, thermodynamics, and reaction engineering. Students need to pass all three subjects.

In each subject, the format of the Q.E. exam is based on a two-hour written exam given by the CE faculty. Students are allowed to bring one A4 sized sheet of personal notes and a non-programmable calculator, but no electronic devices (such as computers or cell phones).

Outcomes of the Q.E. include (1) pass of all three subjects; (2) pass of two subjects; (3) fail of two subjects; (4) fail of all three subjects. Students in situation (2) have on chance to retake the failed subject. Students in situation (3) and (4) have one chance and are required/expected to retake all three subjects. All retakes must be completed before the end of the second year of studies.

Once students have successfully completed the qualifying exam, they work towards the dissertation proposal defense under the supervision of the academic advisor. It is highly recommended that right after the successful completion of the Q.E., the process of periodic review meetings begins, between student, academic advisor and a (small, possibly adhoc) faculty committee.

Ph.D. Dissertation Proposal Defense

The dissertation proposal defense is the second part of the qualification milestones that must be completed to become

a Ph.D. candidate. Ph.D. students are required to complete the dissertation proposal defense within one year after passing the qualifying exam.

The purpose of the dissertation proposal defense is to demonstrate that students have the ability and are adequately prepared to undertake Ph.D.- level research in the proposed area. This preparation includes necessary knowledge of the chosen subject, a review of the literature and preparatory theory or experiment as applicable.

The proposal includes a written proposal and an oral presentation. The written proposal should be about ten pages, which include (1) background and motivation; (2) aims and objectives; (3) research plan and methodology; (4) significance and potential impact; and (5) time schedule. The duration of the oral presentation should be about 30-40 minutes followed by a 30 minutes Q&A session. During the Q&A session, the committee can ask questions related to the proposed work, but may also be related to general knowledge related to the field of studies.

The proposal defense is administered by GPC. Ph.D. students must submit a petition form to GPC that includes the list of faculties who will serve on the committee to take the dissertation proposal defense at the end of the semester preceding when they will defend their proposals. The petition must be approved by the dean.

The committee for the Ph.D. dissertation proposal defense comprises 1) the academic advisor(s) who will also serve as chair of the committee, one faculty member with primary affiliation to the program, one faculty member outside the program, and optionally an additional member from inside KAUST (faculty or a research scientist approved by the dean).

Member	Role	Program Status
1	Chair	Academic advisor(s)
2	Faculty	Within program
3	Faculty	Outside program
4	Approved research scientist	Inside KAUST

This committee should also make itself available for subsequent periodic review meetings with students (see below Section Ph.D. Evaluation Meetings). The composition of the committee could change upon the approval of both the academic advisor and the dean.

Outcomes of the proposal defense include (1) pass; (2) conditional pass with changes; (3) retake; (4) fail. Students

in the second case should submit the revised proposal within one month from the presentation. Students in the third case should retake the presentation within the allowed time frame set by the committee. Students in the last case will be dismissed from the university. Student who successfully pass the dissertation proposal defense are deemed Ph.D. candidates.

Ph.D. Dissertation Defense

To graduate, the Ph.D. candidate has to form a Ph.D. dissertation defense committee, finalize the Ph.D. dissertation and successfully defend the Ph.D. dissertation. It is the responsibility of students to inform the dissertation defense committee on the defense arrangements and scheduling, to submit the complete dissertation at least six weeks prior to the defense date to the committee, and to meet all university or program deadlines for submitting graduation forms to the GPC.

Timing of Activities Prior to Scheduling the Defense

In the semester prior to the semester in which students plan to defend, the Ph.D. candidate should submit the dissertation defense petition to the GPC, along with (i) the list of proposed committee members, including the external examiner, (ii) a pre-proposal evaluation signed by at least three faculty members (two from students' program) that outline if the dissertation research satisfies KAUST requirements for a Ph.D. dissertation, (iii) a current CV of the student, (iv) a current transcript, (v) a list of publications, and (vi) a final draft of the Ph.D. dissertation. The petition indicates the planned date of the defense, and needs to be submitted at the end of the semester prior to the semester in which the defense is planned. The petition is subject to the dean's approval.

Composition and Duties of the Dissertation Committee

The Ph.D. dissertation defense committee must be approved by the dean. The dissertation committee comprises at least four members with qualified positions and background; at least two should be faculty members with primary affiliation within CE program, and at least one from outside of CE program; one should be outside of KAUST (the external committee member).

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty	Outside program
4	External examiner	Outside KAUST
5	Approved research scientist	Inside KAUST
6	Additional faculty	Inside or outside KAUST

Academic advisors and students choose the external examiner, and supply supporting information (CV, publication record) to the dean for approval. The external committee member must be a leader in the field of the Ph.D. topic, and must agree to supply a written report on the Ph.D. dissertation. The external examiner should attend the dissertation defense in person; if this is not possible, a remote participation via video-conference is acceptable.

All committee members must approve in writing (to the dean; 1-2 paragraph letter or email) two weeks prior to scheduling the Ph.D. defense that the dissertation is of sufficient quality to be defended.

The chair of the dissertation committee can be any committee member suggested by the academic advisor and approved by the dean, but not the academic advisor(s). The chair of the dissertation committee manages the dissertation defense, introduces the Ph.D. candidate, the committee, and explains the rules for the dissertation defense. The chair guides through the Q&A session, defines the order in which the examiners ask questions, ensures equal time allocation for each examiner to ask questions, and is responsible for a fair, transparent, non-hostile, defense and scientific debate between the Ph.D. candidate and the examiners. After the defense, the chair reports to the dean on the process and outcome of the defense.

Expectations on the Ph.D. Dissertation

The written dissertation is required to comply with the University formatting guidelines, which are on the library website.

- The complete version of the dissertation has to be sent to the dissertation defense committee at least six weeks prior to the targeted defense date.
- The PhD. dissertation must be written in fluent high-quality English using proper language, style, and

appropriate methods of scientific reasoning.

- Parts of the dissertation research should have been presented at international conferences.
- The dissertation research must lead to high-quality scientific publications in international peer-reviewed journals, ideally leading journals of the field. At least two such journal publications are expected for each Ph.D. graduate in the Chemical Engineering program.

Procedure and Expectations for the Ph.D. Dissertation Defense

The Ph.D. degree requires the passing of the defense and acceptance of the dissertation. The final defense is a public event that consists of an oral presentation followed by questions from the audience and the committee.

- Ph.D. candidates present in about 35-40 minutes public presentation the key ideas, methods and results of the dissertation research, and puts into the context of previous work in this field. The presentation is followed by a 10-15 min Q&A session by general audience, after which the general audience leaves the room.
- The closed-doors Q&A session is taken with the dissertation committee. During this Q&A session, the dissertation committee members take turns in asking their questions, moderated by the dissertation committee chair who ensures that all members have about the same amount of time for questions, and that all aspects of the dissertation defense occur in a fair, collegial, respectful and transparent manner.
- For a successful defense, it is expected (i) that Ph.D. candidates clearly demonstrate deep knowledge and innovative research in the chosen field of research; (ii) that candidates can answer questions well, independently, with minimal help from committee members; (iii) that candidates are able to engage in a high-quality scientific debate with the committee and are able to truly defend the dissertation work.
- The Ph.D. dissertation defense concludes if the committee chair calls it closed, after having asked all committee members if they had any further questions or comments. The chair then asks the candidate to leave the room. The committee then decides on the outcome of the defense, which the chair communicates to the candidate.
- The outcome (pass, pass with conditions, retake, fail) is documented in the appropriate form, including a

reasonably detailed description of the conditions (if any), which is then communicated to the candidate. The report of the committee chair (to be submitted to the dean within three business days) contains a summary of the defense procedure and further details on the conditions (if any) on dissertation improvements.

Outcome of the Ph.D. Dissertation Defense

- Pass: minor modifications on the dissertation, as requested by committee, within one week.
- Pass with conditions: extended modifications on the dissertation, as requested by committee, within four weeks.
- Retake: additional research and major modifications on dissertation, as requested by committee, within six months.
- Fail: dismissal from Ph.D. program according to the regulations of Graduate Affairs and the Registrar's Office.

Chemical Science (ChemS)

Aims and Scope

The KAUST Chemical Sciences (ChemS) program was established in 2010 to provide a modern, research-oriented education in chemistry. It is one of the top internationally ranked programs at KAUST. Leveraging the outstanding facilities at KAUST, the program distinguishes itself by a clear focus and strong emphasis on current research challenges related to catalysis and materials.

Within these two main interdisciplinary research thrusts, the following distinct research orientations are currently addressed:

Materials	Catalysis
Micro- and mesoporous materials	Hetero- and homogeneous catalysis
Metal-organic material	Biocatalysis
Polymeric and Supramolecular material	Photo- and electro catalysis
Computation and modeling	Computation and modeling

Program Contacts

Niveen Khashab, Program Chair
Linda Sapolu, Graduate Student Advisor

Chemical Science M.Sc. Program

It is the responsibility of students to plan their graduate program in consultation with their academic advisor. Students are required to meet all deadlines. Students should be aware that most core courses are offered only once per year.

The Master of Science (M.Sc.) degree is awarded upon successful completion of a minimum of 36 credit hours. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit. Students are expected to complete the M.Sc. degree in three semesters. Satisfactory participation in every KAUST summer session is mandatory.

The M.Sc. Requirements

- Core courses (12 credits)
- Elective courses (9 credits)
- Research/capstone experience (15 credits)
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for every semester of the program they attend
- Completion of one Winter Enrichment Program (WEP)

Core Courses (12 credits)

To complete these twelve credit hours, students should register for three core courses (12 credits) among those listed in the master's course List and compulsory lab rotation (three credits).

ChemS 320	Advanced Organic Chemistry I	3
ChemS 330	Advanced Inorganic Chemistry I	3
ChemS 340	Advanced Organic Chemistry II	3
ChemS 350	Advanced Inorganic Chemistry II	3
ChemS 360	Advanced Physical Chemistry I	3
ChemS 370	Advanced Physical Chemistry II	3

Compulsory lab rotation (ChemS 296): in addition, all incoming M.Sc. students are required to enroll into a

rotation course during their first semester in the program. The goal of this course is to introduce students to various ChemS research groups to aid them in the selection of an academic advisor. Rotation assignments will be made by the mutual approval of designated faculty and students.

Students with a pre-identified advisor may spend their entire rotation period in a given lab with the approval of this advisor and program chair.

These core courses are designed to provide students with the background needed to establish a solid foundation in the program area.

Elective Courses (9 credits)

ChemS 210	Material Chemistry I	3
ChemS 212	Spectroscopy Analysis	3
ChemS 214	Nano-Catalysis	3
ChemS 215	Polymers and Polymerization Processes	3
ChemS 218	Photo and Electro Catalysis	3
ChemS 220	Organometallic Chemistry	3
ChemS 240	Supramolecular Chemistry	3
ChemS 250	Material Chemistry II	3
ChemS 301	Crystallography and Diffraction	3
ChemS 319	Bioinorganic Chemistry	3
ChemS 326	Biocatalysis	3

The elective courses (which exclude research, internship credits, and IED courses) are designed to allow students to tailor their educational experience to meet individual research and educational objectives, with the permission of the academic advisor.

M.Sc. Thesis

The thesis defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than four members. At least two of the required members must be KAUST faculty. The chair plus one additional faculty member must be affiliated with the student's program. This membership can be summarized as:

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty or approved research scientist	Outside program
4	Additional faculty or research scientist	Inside or outside KAUST

Notes:

- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as member 2, 3, or 4, but may not be a research scientist
- Members 2 and 3 must use primary affiliation only
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 4 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 4

View a list of faculty and their affiliations [here](#).

Under *exceptional circumstances* where students are not able to complete a thesis after fulfilling all other M.Sc. requirements, a non-thesis (course only) option could be permitted with approval of the academic advisor and the program chair. The ChemS program looks at this option as a last resort only in the occasions of extreme significance that effect students' ability to complete their thesis.

Chemical Science Ph.D. Program

The Doctor of Philosophy (Ph.D.) degree is designed to prepare students for research careers in academia and industry.

There is a minimum residency requirement at KAUST of three and a half years for students entering with a bachelor's degree and two and a half years for students entering with a master's degree. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit.

The Ph.D. degree includes the following steps:

- Securing an academic advisor
- Successful completion of program coursework
- Passing the qualifying examination
- Passing the dissertation proposal defense to obtain candidacy status
- Preparing, submitting and successfully defending a doctoral dissertation

Ph.D. Course Requirements

The required coursework varies for students entering the Ph.D. degree with a bachelor's degree or a relevant master's degree. Students holding a bachelor's degree must complete all program core/mandatory courses and elective courses outlined in the master's degree section and are also required to complete the Ph.D. courses below. Students entering with a bachelor's degree will qualify to earn a master's degree by satisfying the master's degree requirements.

Students entering the Ph.D. degree with a relevant M.Sc. degree must complete the requirements below, though additional courses may be required by the academic advisor.

Ph.D. Courses

- At least two 300-level courses
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for every semester of the program they attend
- Winter Enrichment Program (WEP) – students who completed WEP while earning the M.Sc. are not required to enroll in a full WEP for a second time during the Ph.D.

Ph.D. Candidacy

In addition to the coursework requirements, students must successfully complete the required Ph.D. candidacy milestones to progress towards Ph.D. candidate status. These milestones consist of the Ph.D. qualifying exam and the Ph.D. dissertation proposal defense. Once students have advanced to candidacy, students are designated as Ph.D. or doctoral candidates.

Ph.D. Qualifying Exam

The purpose of the qualifying exam is to test the student's creativity, independence, and knowledge of the subject matter within the field of study. All students entering the Ph.D. program with a bachelor's degree must take this examination within two years of their admission. Students admitted to the program with a master's degree must take this exam within one year. Students may take the exam earlier with advisor approval. Students need to fill out the required forms and submit their qualifying exam documents at least two weeks prior to their qualifying exam date.

The qualifying exam consists of an oral presentation of an

original idea, which is related to the area of research, but not the exact work done in the lab (same approach as a grant application). The presentation will be followed by a question and answer session regarding both the presented project and general chemistry knowledge.

Scheduling the Qualifying Exam:

In addition to the Ph.D. advisor, two ChemS or ChemS affiliated faculty need to serve as examiners. Students must schedule the examination at a time acceptable to the examiners. Faculty members are expected to make every reasonable effort to be available for the examination.

The Examination:

Students should prepare a written document that explains their oral presentation. This is a brief document, modeled after a standard funding agency (example: National Science Foundation, NSF) proposal. It should be no more than 15 pages in length including figures and references.*This document should be ready to submit to the program and the examiners at least two weeks prior to the oral exam. It might be organized as suggested below:

*These are the general guidelines. Longer documents can be permissible with advisor approval.

1. Summary

A brief overview of the proposed work with emphasis on the intellectual merit and the broader impacts (1 page).

2. Background and Significance

This section should answer the question: Why is the proposed work important?

Briefly sketch the background to the present proposal, critically evaluate existing knowledge, and identify gaps in our present understanding. This section may need to occupy as many as 3-4 pages.

3. Specific Aims

This section is intended to answer, in very specific terms, the question: What do you propose to do?

No background or other narrative material belongs in this section; it is not meant to stand alone, nor to provide details about the experimental system, but rather to provide a succinct and specific summary of the planned research. It is probably most helpful to write this section after writing the rest of the proposal. It should occupy no more than one page.

4. Experimental Design and Feasibility

This section should parallel the Specific Aims section and should answer the question: How will you do the proposed work?

Describe each experiment you propose to conduct and how you will analyze the data and interpret the results. Provide appropriate calculations or cite literature data to support the feasibility of the experiments you propose. Supporting evidence that comes from unpublished work must be clearly identified as such and specifically attributed. Discuss potential drawbacks of any proposed experiments that lack clear precedent, and propose alternative approaches to achieve the aims. This section may need to occupy as many as 3-4 pages.

5. References

The list of references must include complete citations, including all authors and the titles of research articles or book chapters.

Evaluation of Ph.D. Qualifying Exam:

There are four possible outcomes of the Qualifying Exam:

Pass

A pass is achieved when the committee agrees with no more than one dissenting vote, otherwise the student fails.

Pass with conditions

In the instance of a Pass with Conditions, the entire committee must agree on the required conditions and if they cannot, the dean decides. The deadline to complete the conditions is one month after the Qualifying Exam date, unless the committee unanimously agrees to change it.

Fail with retake

In the instance of a Fail with retake, the decision of the committee must be unanimous. The deadline to complete the retake is six months after the Qualifying Exam date, unless the committee unanimously agrees to reduce it.

Fail without retake

Students who fail the Qualifying Exam, or who fail the Retake will be dismissed from the University.

Student must submit PSE Ph.D. Dissertation Proposal Evaluation form to the program GPC within 48 hours after their presentation, regardless of outcome of the qualifying

exam.

After the evaluation and recommendation by the committee members, the final documents of the Research Proposal should be submitted to Graduate Program Coordinator (GPC).

Ph.D. Dissertation Proposal Defense

The Dissertation Proposal Defense is the second part of the qualification milestones that must be completed to become a Ph.D. Candidate. The purpose of the Dissertation Proposal Defense is to demonstrate that students have the ability and are adequately prepared to undertake Ph.D. level research in the proposed area. This preparation includes necessary knowledge of the chosen subject, a review of the literature and preparatory theory or experiment as applicable (data presentation).

Ph.D. students are required to complete the Dissertation Proposal Defense within one year after passing the qualifying exam. The proposal defense date will be determined by students and their advisors. Ph.D. students must request to present the Dissertation Proposal Defense to the Proposal Dissertation Committee by submitting the Dissertation Committee Formation Form two weeks prior to the Ph.D. proposal defense date.

Per advisor discretion, students can present a summary of their PhD proposal data together with their oral qualifying exam if this research is already published (at least two first or co-first author papers).

Ph.D. Proposal Defense Evaluation

There are four possible outcomes from the Dissertation Proposal Defense:

- Pass: A pass is achieved when the committee agrees with no more than one dissenting vote, otherwise the student fails.
- Pass with conditions: In the instance of a Pass with conditions, the entire committee must agree on the required conditions and if they cannot, the Dean decides. The deadline to complete the conditions is one month after the defense date, unless the committee unanimously agrees to change it.
- Fail with retake: The deadline to complete the retake is six months after the defense date, unless the committee unanimously agrees to reduce it.
- Fail without retake: In the instance of a Fail without Retake, the decision of the committee must be

unanimous. Students who fail the Dissertation Proposal Defense, or who fail the retake, will be dismissed from the University.

The Dissertation Proposal Evaluation form must be submitted within 48 hours after presenting the dissertation proposal.

Upon passing the Proposal Defense, students must submit the written research proposal document and the change to Ph.D. candidate status form to the GPC.

Ph.D. Dissertation Proposal Defense Committee

The Ph.D. dissertation proposal defense committee, which must be approved by the program chair and the dean, must consist of at least three members and typically includes no more than six members. The chair, plus one additional faculty member must be affiliated with the student's program.

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty	Outside program
4	Approved research scientist	Inside KAUST

Notes:

- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as members 2 or 3
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2 or 3 depending upon their affiliation with the student's program, they may also serve as co-chairs

Once constituted, the composition of the proposal committee can only be changed with the approval of the academic advisor, the program chair, and the dean.

View a list of faculty and their affiliations here.

Ph.D. Final Defense Committee

The Ph.D. dissertation defense committee, which must be approved by the dean, must consist of at least four members and typically includes no more than six members. At least three of the required members must be KAUST faculty and one must be an external examiner who is external to KAUST. The chair, plus one additional faculty member must be affiliated with the student's program. The external examiner is not required to attend the defense, but must write a report on the dissertation and may attend the dissertation defense at the discretion of the program.

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty	Outside program
4	External examiner	Outside KAUST
5	Approved research scientist	Inside KAUST
6	Additional faculty	Inside or outside KAUST

Notes:

- The chair cannot be the academic advisor
- Members 1-4 are required, members 5 and 6 are optional
- Co-chairs may serve as either members 2, 3 or 6
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 6 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 6, but not as the external examiner

The only requirement with commonality with the proposal committee is the academic advisor, although it is expected that other members will carry forward to this committee.

Co-supervisors can be considered one of the above four members required, provided they come under the categories listed (i.e. meets the requirements of the

position).

View a list of faculty and their affiliations here.

Ph.D. Final Dissertation Defense

The Ph.D. requires the passing of the defense and acceptance of the dissertation. The final defense is a public presentation that consists of an oral defense followed by questions and may last a maximum of three hours.

Students must determine the defense date with agreement of all the members of the dissertation committee, meet deadlines for submitting graduation forms and inform the committee of their progress. It is the students' responsibility to submit the required documents to the graduate program coordinator (GPC) at the beginning of the semester they intend to defend. The required documents include (i) the list of proposed committee members, including the external examiner (and a CV of the external examiner, (ii) a current CV of the student, (iii) a current transcript, (iv) a list of publications, and (v) a final draft of the Ph.D. dissertation. Students must submit the written dissertation to the committee one month prior to the defense date in order to receive feedback.

There are four possible outcomes from the dissertation final defense:

- Pass
- Pass with conditions
- Retake
- Fail without retake

A pass is achieved when the committee agrees with no more than one dissenting vote. In the instance of a pass with conditions, the entire committee must agree on the required conditions, and if they cannot, the dean decides. The deadline to meet conditions is three months after the defense date, unless the committee unanimously agrees to reduce it. If the conditions will take three months or more, or more than one member casts a negative vote, one retake of the defense is permitted. The deadline to complete the retake is as decided by the defense committee with a maximum of six months after the defense date, unless the committee unanimously agrees to change it. Students who fail without retake or who fail the retake will be dismissed from the University..

Evaluation of the Ph.D. dissertation defense is recorded by submitting the result of the Ph.D. dissertation defense examination form within three days after the defense to the

Office of the Registrar.

Earth Science and Engineering (ErSE)

Aims and Scope

In the Earth Science and Engineering (ErSE) program at KAUST, faculty and their students engage in interdisciplinary research to understand and model geophysical and geological processes in the complex and changing nature of our planet. The ErSE curriculum provides graduate-level education in earth sciences and their applications in four distinct specializations represented by four tracks:

Geophysical Fluids and Climate System Science

Geophysics

Geology

Machine Learning in Geosciences

The program is rich with opportunities, for both M.Sc. and Ph.D. students, with a focus on modern computational and advanced data-analysis as well as laboratory and field methods to study geoscience problems. Depending on the chosen track, students in this program receive broad training in numerical methods, mathematical modelling, geophysics and/or geology. M.Sc. students have an option to participate in scientific research activities that include computational and mathematical modelling or field- and/or lab study projects (M.Sc. with thesis). Ph.D. candidates in the program conduct original research publishable in international high-ranking peer-reviewed journals.

Program Contacts

Sigurjon Jonsson, Program Chair
Karema Alaseef, Graduate Student Advisor

Assessment Test

Students are admitted to KAUST from a wide variety of programs and backgrounds. In order to facilitate the design of an appropriate study plan, all admitted students without a master's degree are required to take a written assessment exam when they arrive on campus. The purpose of the

assessment is to determine whether students have the prerequisites for undertaking graduate-level courses taught in the program. The academic advisor works with admitted students to develop a study plan. Students are encouraged to prepare for the assessment by refreshing the general knowledge gained from their undergraduate education before arriving to KAUST. The study plan requirements must be satisfactorily completed, in addition to the University degree requirements.

Earth Science and Engineering M.Sc. Program

ErSE master's students must choose one of the available tracks. Students in the Geophysical Fluids and Climate System Science track study flow and transport processes both beneath and above the Earth's surface, including ocean and atmospheric circulation, flows in subsurface porous media, transport of dust and anthropogenic pollutants in atmosphere and ocean, and their effect on climate. Students in the Geophysics track focus on seismology, geophysics, geodynamics and geomechanics. The Geology track focuses on (carbonate) sedimentology and stratigraphy, petrology/geochemistry and structural geology. The Machine Learning in Geosciences track equips graduate students with the fundamentals of machine learning (ML) methods and their applications to geoscience problems.

It is the responsibility of students to plan their graduate program in consultation with their academic advisor. Students are required to meet all deadlines. Students should be aware that most core courses are offered only once per year.

The Master of Science (M.Sc.) degree comprises thesis and non-thesis options. It is awarded upon successful completion of a minimum of 36 credit hours. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit. Students are expected to complete the M.Sc. degree in three semesters. Satisfactory participation in every KAUST summer session is mandatory.

The M.Sc. Requirements

- Core courses (12 credits) designed to provide students with the background needed to establish a solid foundation in the program area
- Elective courses (12 credits) designed to allow

students to tailor their educational experience to meet individual research and educational objectives, with the permission of the academic advisor

- M.Sc. thesis research or research/capstone experience (12 credits) designed to provide students with the research experience
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for every semester of the program they attend
- Completion of one Winter Enrichment Program (WEP)

Geophysical Fluids and Climate System Science Track Requirements

Core Courses (12 credits). Choose at least 4 - at least 2 from ErSE and at least one from AMCS:

ErSE 201	Geophysical Fluid Dynamics I	3
ErSE 211	Global Geophysics	3
ErSE 213	Inverse Problems	3
ErSE 253	Data Analysis in Geosciences	3
AMCS 206	Applied Numerical Methods	3
AMCS 231	Applied Partial Differential Equations I	3
AMCS 251	Numerical Linear Algebra	3
AMCS 252	Numerical Analysis of Differential Equations	3

Elective Courses (12 credits). Choose at least 4 courses:

ErSE 202	Computational Groundwater Hydrology	3
ErSE 294	Contemporary Topics in Earth Science	3
ErSE 301	Geophysical Fluid Dynamics II	3
ErSE 303	Numerical Methods of Geophysics	3
ErSE 304	Geophysical Continuum Mechanics	3
ErSE 305	Multiphase Flows in Porous Media	3
ErSE 307	Atmospheric Chemistry and Transport	3
ErSE 309	Thermodynamics of Subsurface Reservoirs	3
ErSE 330	Pore-Scale Modeling of	3

ErSE 331	Interferometric Synthetic Aperture Radar (InSAR) in Earth Sciences	3	ErSE 394	Contemporary Topics in Earth Science	3
ErSE 394	Contemporary Topics in Earth Science	3	AMCS 211	Numerical Optimization	3
ERPE 200	Energy and the Environment	3	AMCS	Stochastic Processes	3
ERPE 220	Sediments: Properties and Processes	3	241/STAT 250		
ERPE 230	Rock Mechanics for Energy Geo-Engineering	3	AMCS 308	Stochastic Numerics with Application in Simulation and Data Science	3
ERPE 270/ME 214	Experimental Methods in Research	3	AMCS 312	High Performance Computing	3
ERPE 310	Sequence Stratigraphy	3	AMCS 350	Spectral Methods for Uncertainty Quantification	3
ERPE 311	Carbonate Diagenesis	3	CS 201	Introduction to Programming with Python	3
ERPE 315	Energy Geoscience	3	CS 204	Data Structures and Algorithms	3
MarS 326	Coral Reef Ecology	3	CS 207	Programming Methodology and Abstractions	3
MarS 335	Oceanography	3	CS 220	Data Analytics	3
Machine Learning in Geosciences Track Requirements			CS 323	Deep Learning for Visual Computing	3
Core Courses (12 credits). Choose at least 4 courses:			CS 331	Stochastic Gradient Descent Methods	3
ErSE 213	Inverse Problems	3	CS 340	Computational Methods in Data Mining	3
ErSE 222	Machine Learning in Geoscience	3	CS 341	Advanced Topics in Data Management	3
ErSE 253	Data Analysis in Geosciences	3	ERPE 221	Geoscience Fundamentals	3
AMCS 251	Numerical Linear Algebra	3	ME 200A	Incompressible Flows	3
CS 229	Machine Learning	3	MSE 200	Mathematics for Material Science and Engineering	3
STAT 220	Probability and Statistics	3	Research/Capstone Experience (12 credits)		
Elective Courses (12 credits). Choose at least 4 courses:			The details of this portion of the degree are uniquely determined by students with the permission of the academic advisor and will involve a combination of research and other capstone experiences. Students are expected to work weekly a minimum of 3 hours/week per each research credit they are registered for. MLG track students are strongly encouraged to include a summer internship at a high-tech company that requires machine learning applications.		
ErSE 201	Geophysical Fluid Dynamics I	3	ErSE 295	Master's Internship	0-12
ErSE 210	Seismology	3	ErSE 297	Master's Thesis Research	0-12
ErSE 211	Global Geophysics	3	ErSE 299	Master's Directed Research	0-12
ErSE 214	Seismic Exploration	3	M.Sc. Thesis		
ErSE 260	Seismic Imaging	3	Students wishing to pursue the thesis option must have at least a 3.2 cumulative GPA. A minimum of 12 credits of thesis research (297) is required. Students are permitted to register for more than 12 credits of M.Sc. thesis research		
ErSE 294	Contemporary Topics in Earth Science	3			
ErSE 301	Geophysical Fluid Dynamics II	3			
ErSE 303	Numerical Methods of Geophysics	3			
ErSE 305	Multiphase Flows in Porous Media	3			
ErSE 328	Advanced Seismic Inversion	3			
ErSE 331	Interferometric Synthetic Aperture Radar (InSAR) in Earth Sciences	3			
ErSE 353	Data Assimilation	3			
ErSE 360	Mathematical Methods for Seismic Imaging	3			

with the permission of the academic advisor. The selected academic advisor must be a fulltime program-affiliated assistant, associate or full professor at KAUST. The faculty not affiliated with ErSE can become project-affiliated for the only specific thesis project upon program-level approval. Project-affiliation approval must be completed prior to commencing research.

A written thesis and an oral defense of the M.Sc. thesis are required. The students have to submit a final copy of the thesis to the thesis committee members at least two weeks prior to the defense date.

The thesis defense committee, which must be approved by the dean, consists of three KAUST faculty. If additional expertise is needed the committee could be extended, subject to dean's approval. At least two committee members must be affiliated with the program. The chair may be any KAUST faculty familiar with the program rules. This membership can be summarized as:

Member	Role	Program Status
1	Chair	Within or outside program
2	Faculty	Within program
3	Faculty	Within or outside program
4	Additional faculty or research scientist	Within or outside program

Notes:

- Members 1, 2, and one of 3 or 4 are required
- Co-chairs may serve as member 2 or 3
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2 or 3 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 3

View a list of faculty and their affiliations here.

M.Sc. Non-Thesis

Students wishing to pursue the non-thesis option must complete a total of 12 capstone credits, with a minimum of 6 credits of directed research (299).

Students must complete the remaining credits through one or a combination of the options listed below:

- Broadening experience courses: courses that broaden a student's M.Sc. experience
- Internship: research-based summer internship (295) – students are only allowed to take one internship
- Ph.D. courses: courses numbered at the 300 level

Graduate Seminar

All students are required to register and receive a satisfactory grade in the graduate seminar (non-credit) for every semester of the program they attend.

Winter Enrichment Program (WEP)

Students are required to satisfactorily complete at least one full Winter Enrichment Program (WEP).

Earth Science and Engineering Ph.D. Program

The Doctor of Philosophy (Ph.D.) degree is designed to prepare students for research careers in academia and industry.

There is a minimum residency requirement at KAUST of three and a half years for students entering with a bachelor's degree and two and a half years for students entering with a master's degree. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit.

The Ph.D. degree includes the following steps:

- Securing an academic advisor
- Successful completion of program coursework
- Passing the qualifying examination
- Passing the dissertation proposal defense to obtain candidacy status
- Preparing, submitting and successfully defending a doctoral dissertation

Academic Advisor

The selected academic advisor must be a full-time program-affiliated professor at KAUST. Students may also select an academic advisor from another program at KAUST. The academic advisor can only become project affiliated for the specific dissertation project with program level approval. Project affiliation approval must be completed prior to commencing research.

View a list of faculty and their affiliations here.

Ph.D. Course Requirements

The required coursework varies for students entering the Ph.D. degree with a bachelor's degree or a relevant master's degree. Students holding a bachelor's degree must complete all program core/mandatory courses and elective courses outlined in the master's degree section and are also required to complete the Ph.D. courses below. Students entering with a bachelor's degree will qualify to earn a master's degree by satisfying the master's degree requirements.

Students entering the Ph.D. degree with a relevant M.Sc. degree must complete the requirements below, though additional courses may be required by the academic advisor. Upon approval of the advisor, Ph.D. students are allowed to choose the relevant courses from the entire ErSE curriculum, as well as from the curriculums of other KAUST programs.

Ph.D. Courses

- At least three courses that comprise at least two 300-level courses, at least two courses should be from the ErSE curriculum for students coming with a master's from another university or a different KAUST program and at least one 300-level course from ErSE curriculum for students with M.Sc. from KAUST-ErSE
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for every semester of the program they attend
- Winter Enrichment Program (WEP) – students who completed WEP while earning the M.Sc. are not required to enroll in a full WEP for a second time during the Ph.D.

Ph.D. Candidacy

In addition to the coursework requirements, students must

successfully pass the subject-based qualifying examination and Ph.D. proposal defense to progress towards Ph.D. candidacy status.

Ph.D. Qualifying Examination

The Ph.D. qualifying examination (Q.E.) is a subject-based examination – oral and written.

The Q.E. committee consists of three members. If additional expertise is required the committee could be extended. The chair can be any KAUST faculty member familiar with the program rules. At least two committee members should be affiliated with the program.

Member	Role	Program Status
1	Chair	Within or outside program
2	Faculty	Within or outside program
3	Faculty	Within program

Once students have successfully completed the qualifying exam, they work towards the dissertation proposal defense under the supervision of the academic advisor.

Ph.D. Dissertation Proposal Defense

The dissertation proposal defense is the second part of the qualification milestones that must be completed within one year after passing the qualifying exam to become a Ph.D. candidate. Students have to submit to the Ph.D. dissertation proposal committee a written research proposal and pass an oral research proposal defense.

The Ph.D. dissertation proposal defense committee, which must be approved by the dean, consists of three members. If additional expertise is required the committee could be extended, subject to dean's approval. The chair can be any KAUST faculty member familiar with the program rules. Two committee members must be KAUST faculty affiliated with the program and one must be a KAUST faculty outside the program.

Member	Role	Program Status
1	Chair	Within or outside program
2	Faculty	Within or outside program
3	Faculty	Outside program

Notes:

- Co-chairs may serve as members 2 or 3
- Adjunct professors and professors emeriti may retain

their roles on current committees, but may not serve as chair on any new committees

- Professors of practice and research professors may serve as members 2 or 3 depending upon their affiliation with the student’s program, they may also serve as co-chairs

Once constituted, the composition of the proposal committee can only be changed with the approval of both the academic advisor and the dean.

This committee should also make itself available for subsequent periodic review meetings with students. The composition of the committee could change over time.

View a list of faculty and their affiliations here.

Ph.D. Final Defense

To graduate, Ph.D. candidates have to finalize the Ph.D. dissertation, form a Ph.D. dissertation defense committee, and successfully defend a Ph.D. dissertation.

The Ph.D. dissertation defense committee, which must be approved by the dean, consists of four mandatory members. If additional expertise is required the committee could be extended, subject to the dean’s approval. Three of the mandatory members must be KAUST faculty and one must be an external examiner who is external to KAUST. The chair can be any KAUST faculty familiar with the program rules. At least two committee members must be KAUST faculty affiliated with the program, and one must be a KAUST faculty outside the program. The external examiner must write a report on the dissertation and attend the dissertation defense either in person or remotely.

Member	Role	Program Status
1	Chair	Within or outside program
2	Faculty	Within program
3	Faculty	Within or outside program
4	External examiner	Outside KAUST

Notes:

- The chair cannot be the academic advisor
- The chair cannot be the academic advisor
- Co-chairs may serve as either members 2 or 3

- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2 or 3 upon their affiliation with the student’s program, they may also serve as co-chairs
- Visiting professors may serve as member 2 or 3 depending upon their affiliation

The only requirement with commonality with the proposal committee is the academic advisor, although it is expected that other members will carry forward to this committee.

If students have a co-supervisor, this person can be considered one of the four mandatory members required, provided they come under the categories listed (i.e. meets the requirements of the position).

View a list of faculty and their affiliations here.

Ph.D. Final Dissertation Defense

The Ph.D. requires the passing of the defense and acceptance of the dissertation. The final defense is a public presentation that consists of an oral defense followed by questions and may last a maximum of three hours.

Students must determine the defense date with agreement of all the members of the dissertation committee, meet deadlines for submitting graduation forms and inform the committee of their progress. It is the students’ responsibility to submit the required documents to the graduate program coordinator (GPC) at the beginning of the semester they intend to defend. The required documents include (i) the list of proposed committee members, including the external examiner (and a CV of the external examiner, (ii) a current CV of the student, (iii) a current transcript, (iv) a list of publications, and (v) a final draft of the Ph.D. dissertation.

Students must submit the written dissertation to the committee one month prior to the defense date in order to receive feedback.

There are four possible outcomes from the dissertation final defense:

- Pass
- Pass with conditions
- Retake

- Fail without retake

A pass is achieved when the committee agrees with no more than one dissenting vote. In the instance of a pass with conditions, the entire committee must agree on the required conditions, and if they cannot, the dean decides. The deadline to meet conditions is three months after the defense date, unless the committee unanimously agrees to reduce it. If the conditions will take three months or more, or more than one member casts a negative vote, one retake of the defense is permitted. The deadline to complete the retake is as decided by the defense committee with a maximum of six months after the defense date, unless the committee unanimously agrees to change it. Students who fail without retake or who fail the retake will be dismissed from the University.

Evaluation of the Ph.D. dissertation defense is recorded by submitting the result of the Ph.D. dissertation defense examination form within three days after the defense to the Office of the Registrar.

Energy Resources and Petroleum Engineering (ERPE)

Aims and Scope

Research and education, as well as their transformative potential, are central to KAUST's mission. KAUST educates scientific and technological leaders, catalyzes the diversification of the Saudi Arabian economy, and addresses challenges of regional and global significance, thereby serving the Kingdom, the region, and the world. Through the synergy of science and technology, with a focus on innovation and enterprise, KAUST is a catalyst for transforming people's lives.

Faculty and students in the Energy Resources and Petroleum Engineering (ERPE) program at KAUST engage in interdisciplinary research to understand and model hydro-chemo-thermo-mechanical coupled processes in the subsurface, with emphasis on multiphase and reactive fluid flow (oil, gas, brine, water, and CO₂).

The Energy Resources and Petroleum Engineering program for both M.Sc. and Ph.D. students focuses on modern reservoir description, geology, engineering, and management. Students in this program receive broad training in advanced scientific concepts and thermodynamics, geology, geophysical characterization, and reservoir engineering. Students participate in scientific research activities that may include mathematical analyses, geological and computational modeling, and/or

laboratory/field studies. Ph.D. candidates focus on original research-driven to advance the boundaries of knowledge.

Program Contacts

Hussein Hoteit, Program Chair
Karema Alaseef, Graduate Student Advisor

Assessment Test

Students are admitted to KAUST from a wide variety of programs and backgrounds. In order to facilitate the design of an appropriate study plan, all admitted students without a master's degree are required to take a written assessment exam when they arrive on campus. The purpose of the assessment is to determine whether students have mastered the prerequisites for undertaking graduate-level courses taught in the program. The topics covered by the assessment test for the ERPE program include:

1. Basic Principles of Mechanics
2. Basic Principles of Physics
3. Engineering Mathematics
4. Linear Algebra
5. Basic Principles of General Chemistry

Students are encouraged to carefully prepare for the assessment by refreshing the general knowledge gained from their undergraduate education before arriving at KAUST. Failure to pass one topic or more of the assessment test will result in taking mandatory 100-level courses that do not count for the M.Sc. credits. The academic advisor works with admitted students to develop a study plan. The study plan requirements must be satisfactorily completed, in addition to the University degree requirements.

Credits

All students are required to be enrolled in 12 credits each semester and 6 credits during the summer session. These credits can comprise coursework, dissertation research, directed research, thesis credits, or internships.

Energy Resources and Petroleum Engineering M.Sc. Program

The Master of Science (M.Sc.) degree is awarded upon successful completion of a minimum of 36 credit hours. A minimum GPA of 3.0 must be achieved to graduate.

The academic advisor must be a full-time program-

affiliated assistant, associate, or full professor at KAUST. The academic advisor can only become project affiliated for the specific thesis project upon program level approval. Project affiliation approval must be completed prior to commencing research.

It is the sole responsibility of students to plan their graduate program in consultation with their advisor. Students are required to meet all deadlines and should be aware that most core courses are offered only once per year.

Individual courses require a minimum of a 'B-' for course credit. Students typically complete the M.Sc. degree within four semesters (18 months), however, they are strongly encouraged to complete the M.Sc. in three semesters (Fall, Spring, and Summer semesters, i.e., 12 months). Satisfactory participation in every KAUST's summer session is mandatory. Summer session courses are credit-bearing and apply towards the degree.

The M.Sc. Requirements

- Core courses (12 credits)
- Elective courses (12 credits)
- Thesis research including capstone experience (12 credits)
- Graduate seminar
- Winter Enrichment Program (WEP)

Core Courses (12 credits)

Core courses are designed to provide students with the background needed to establish a solid foundation in the program area. Students must select a minimum of four ERPE core courses from the list below to satisfy program requirements.

ERPE 200	Energy and the Environment	3
ERPE 210	Fundamentals of Carbonate Geology	3
ERPE 211	Data Integration for Geomodelling	3
ERPE 220	Sediments: Properties and Processes	3
ERPE 221	Geoscience Fundamentals	3
ERPE 230	Rock Mechanics for Energy Geo-Engineering	3
ERPE 240	Fractals, Percolation and Pore-scale Flow	3
ERPE 250	Reservoir Engineering Fundamentals and	3

	Applications	
ERPE 260	Drilling Engineering	3
ERPE 331	Subsurface Geomechanics and Field Applications	3

Elective Courses (12 credits)

Students may select four elective courses from any 200 or 300 level courses at KAUST. Courses above (under core courses) and those listed below are most often selected by ERPE students. Note: selections require approval from the academic advisor. The elective courses are designed to allow students to tailor their educational experience to meet individual and educational objectives.

AMCS 201	Applied Mathematics I	3
AMCS 206	Applied Numerical Methods	3
AMCS 231	Applied Partial Differential Equations I	3
AMCS 251	Numerical Linear Algebra	3
CS 201	Introduction to Programming with Python	3
CS 229	Machine Learning	3
ErSE 210	Seismology	3
ErSE 213	Inverse Problems	3
ErSE 222	Machine Learning in Geoscience	3
ErSE 253	Data Analysis in Geosciences	3
ErSE 260	Seismic Imaging	3
ErSE 309	Thermodynamics of Subsurface Reservoirs	3
ErSE 330	Pore-Scale Modeling of Subsurface Flow	3
ErSE 353	Data Assimilation	3
ERPE 241	Multiphase Flow in Porous Media	3
ERPE 270/ME 214	Experimental Methods in Research	3
ERPE 310	Sequence Stratigraphy	3
ERPE 311	Carbonate Diagenesis	3
ERPE 315	Energy Geoscience	3
ERPE 331	Subsurface Geomechanics and Field Applications	3
ERPE 350	Thermodynamics of Subsurface Reservoirs	3
ERPE 351	Modeling Naturally Fractured Reservoirs	3
ERPE 360	Field Development Planning	3
ERPE 361	Advanced Well Testing	3
ERPE 362	Enhanced Oil Recovery	3
STAT 210	Applied Statistics and Data Analysis	3
STAT 220	Probability and Statistics	3
STAT 230	Linear Models	3

STAT 240	Bayesian Statistics	3
STAT 250	Stochastic Processes	3

M.Sc. Thesis

Students must have at least a 3.0 cumulative GPA. A minimum of 12 credits of thesis research (297) is required. Students are permitted to register for more than 12 credits of M.Sc. thesis research with the permission of the academic advisor. The selected academic advisor must be a full time program-affiliated assistant, associate, or full professor at KAUST. This advisor can only become project-affiliated for the specific thesis project upon program level approval. Project-affiliation approval must be completed prior to commencing research.

A written thesis and an oral defense of the M.Sc. thesis are required. It is advisable that students submit a final copy of the thesis to the thesis committee members at least two weeks prior to the defense date.

The thesis defense committee, which must be approved by the dean, consists of three KAUST faculty. If additional expertise is needed, the committee could be extended, subject to dean's approval. At least two committee members must be affiliated with the program. The chair may be any KAUST faculty familiar with the program rules. This membership can be summarized as:

Member	Role	Program Status
1	Chair	Within or outside program
2	Faculty	Within program
3	Faculty	Within or outside program
4	Additional faculty or research scientist	Within or outside program

Notes:

- Members 1, 2, and one of 3 or 4 are required
- Co-chairs may serve as member 2 or 3
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2 or 3 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 3

M.Sc. Non-Thesis

The non-thesis option is not supported by the ERPE program. All M.Sc. and M.Sc./Ph.D. students must conduct a capstone experience, and therefore the M.Sc. thesis option should be selected.

Graduate Seminar

All students are required to register and receive a satisfactory grade in the graduate seminar (non-credit) for every semester of the program they attend, except for the last semester of graduation. The attendance of the graduate seminar is optional for the graduation semester.

Winter Enrichment Program (WEP)

Students are required to satisfactorily complete at least one full Winter Enrichment Program (WEP).

Energy Resources and Petroleum Engineering Ph.D. Program

The Doctor of Philosophy (Ph.D.) degree is designed to prepare students for research careers in either academia or industry.

There is a minimum residency requirement at KAUST of three and a half years for students entering with a bachelor's degree and two and a half years for students entering with a master's degree. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of a B- for course credit.

The Ph.D. degree includes the following steps:

- Securing an academic advisor
- Successful completion of program coursework
- Passing the qualifying examination
- Passing the dissertation proposal defense to obtain candidacy status
- Preparing, submitting and successfully defending a doctoral dissertation

Academic Advisor

The selected academic advisor must be a full-time program-affiliated professor at KAUST. Students may also select an academic advisor from another program at KAUST. The academic advisor can only become project affiliated for the specific dissertation project with program-level approval. Project affiliation approval must be

completed prior to commencing research.

Ph.D. Course Requirements

The required coursework varies for students entering the Ph.D. with a bachelor's degree or relevant master's degree. Students holding a bachelor's degree must complete all program core courses and elective courses outlined in the master's degree section and are also required to complete the Ph.D. courses below. Students entering with a bachelor's degree may also qualify to earn a master's degree by satisfying the master's degree requirements. However, it is the students' responsibility to declare their intentions to obtain the master's degree before the proposal defense.

Students entering the Ph.D. with a relevant master's degree must complete the minimum requirements below (note: additional courses may be required by the academic advisor):

- Students with an ERPE master's degree: at least two 300-level courses.
- Students with a KAUST master's degree but not in ERPE or with a master's degree from another university must take a minimum of four ERPE courses: two must be core courses, and two must be 300-level courses.
- Transfer students: students transferring from another university's Ph.D. program may receive coursework credit on a case-by-case basis, upon the recommendation of the academic advisor and the approval of the dean. Transfer students must still take a minimum of four ERPE courses and satisfy the qualifying exam and dissertation proposal defense requirements at KAUST.
- Graduate seminar 398 (non-credit): all students are required to register and receive a Satisfactory grade for every semester of the program they attend, except for the last semester of graduation. The attendance of the graduate seminar 398 is optional for the graduation semester.
- Winter Enrichment Program: students are required to satisfactorily complete at least one full Winter Enrichment Program (WEP) as part of the degree requirements. Students who completed WEP requirements while earning the master's degree are not required to enroll in a full WEP for a second time in the Ph.D. degree.

Ph.D. Qualifying Examination

The purpose of the subject-based qualifying exam is to test students' knowledge of the subject matter within the field of study. All students entering the Ph.D. program with a bachelor's degree must take this examination within two years of their admission. Students with a master's degree must take the qualifying exam within one year of arriving at KAUST. Students who "fail with no retake" or fail the retake will be dismissed from the University.

The subject-based qualifying exam is built on the courses completed by Ph.D students during their studies at KAUST in the current program they are enrolled in. The exam has a written and an oral component, based on three ERPE courses, taught by three different faculty members. Students must select the courses in communication with the academic advisor, with at least one being a 300-level course. A relevant course from another program may be substituted for an ERPE course, but only upon approval by the program chair. Both the written and oral components of the exam have to be completed within a time frame of six weeks (in total). The oral examination in all three subjects will be held on the same day.

The qualifying exam is scheduled twice per year in January and June. A call for registration will be sent via email to eligible Ph.D. students. The email will include the exam date and instructions to register for the exam.

Ph.D. Dissertation Proposal

Students must successfully complete a Ph.D proposal defense. The purpose of the dissertation proposal defense is to demonstrate that students have the ability and are adequately prepared to undertake Ph.D.-level research in the proposed area. This preparation includes necessary knowledge of the chosen subject, a review of the literature, and preparatory theory or experiments as applicable.

The dissertation proposal defense is the second part of the qualification milestone that must be completed to become a Ph.D. candidate. Ph.D. students are required to complete the dissertation proposal defense within one year after passing the qualifying examination.

The dissertation proposal defense includes two aspects: a written research proposal and an oral research proposal defense. The dissertation proposal defense is not a pre-defense. The written proposal should be about ten pages, which include (1) background and motivation; (2) aims and objectives; (3) research plan and methodology; (4) significance and potential impact; and (5) dissertation structure and time schedule. The duration of the oral

presentation should be about 30 minutes, followed by a 30-minute Q&A session. During the Q&A session, the committee can ask questions related to the novelty, impact, plan, and feasibility of the proposed work.

Ph.D. students must request to present the dissertation proposal defense to the proposal dissertation committee at the beginning of the semester that they intend to defend their proposal. Students must submit the written research proposal to the committee at least two weeks prior to the defense date.

The Ph.D. dissertation proposal defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than six members. The chair, plus one additional faculty member must be affiliated with the ERPE program.

Member	Role	Program Status
1	Chair	Within ERPE program
2	Faculty	Within ERPE program
3	Faculty	Outside program
4	Approved research scientist	Inside KAUST

Notes:

- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as members 2 or 3
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2 or 3 depending upon their affiliation with the program, they may also serve as co-chairs

Once constituted, the composition of the proposal committee can only be changed with the approval of both the academic advisor and the dean.

View a list of faculty and their affiliations [here](#).

There are four possible outcomes from the dissertation proposal defense:

- Pass
- Pass with conditions

- Retake
- Fail without retake

A pass is achieved when the committee agrees with no more than one dissenting vote. In the instance of a pass with conditions, the entire committee must agree on the required conditions and if they cannot, the dean decides. The deadline to complete the conditions is three months after the defense date, unless the committee unanimously agrees to change it. In the instance of a fail without retake, the decision of the committee must be unanimous. Students who fail without retake or who fail the retake will be dismissed from the University.

Students who successfully pass the dissertation proposal defense are deemed Ph.D. candidates.

Ph.D. Dissertation Defense Committee

To graduate, Ph.D. candidates must form a Ph.D. dissertation defense committee, finalize the Ph.D. dissertation, successfully defend the Ph.D. dissertation and submit the dissertation.

The Ph.D. dissertation defense committee must consist of at least four members (typically no more than six members), and must be approved by the dean. At least three of the required members must be KAUST faculty: (1) the chair, plus one additional faculty member must be affiliated with the student's program, and (2) one must be from another program. The external examiner is external to KAUST and must attend the defense and write a report on the dissertation.

Dissertation Defense Committee

Member	Role	Program Status
1	Chair	Within or outside ERPE program
2	Faculty	Within ERPE program
3	Faculty	Outside program
4	External examiner	Outside KAUST
5 (optional)	Faculty or approved research scientist	Inside KAUST
6 (optional)	Additional scientist from academia or industry	Outside KAUST

Notes:

- The chair cannot be the academic advisor

- Members 1-4 are required. Members 5 and 6 are optional
- Co-chairs may serve as either members 2 or 3
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees.
- Professors of practice and research professors may serve as members 2, 3 or 5 depending upon their affiliation with the program. They may also serve as co-chairs.

The only requirement with commonality with the proposal committee is the academic advisor, although it is expected that other members will carry forward to this committee.

If students have a co-academic advisor, this person can be considered one of the above four members required, provided they come under the categories listed (i.e., meets the requirements of the position).

Ph.D. Dissertation Defense

The Ph.D. requires the passing of the defense and acceptance of the dissertation. The final defense starts with an approximately 45-minute long public presentation, followed by questions from the audience. The oral defense then continues behind closed doors. Only the student and official committee members are allowed during this phase of the defense.

Students must determine the defense date with agreement of all the members of the dissertation committee, meet deadlines for submitting graduation forms and inform the committee of their progress. It is the students' responsibility to submit the required documents to the graduate program coordinator (GPC) at the beginning of the semester they intend to defend. The required documents include (i) the list of proposed committee members, including the external examiner (and a CV of the external examiner, (ii) a current CV of the student, (iii) a current transcript, (iv) a list of publications, and (v) a final draft of the Ph.D. dissertation. Students must submit the written dissertation to the committee one month prior to the defense date in order to receive feedback.

There are four possible outcomes from the dissertation's final defense:

- Pass
- Pass with conditions
- Retake

- Fail without retake

A pass is achieved when the committee agrees with no more than one dissenting vote. In the instance of a pass with conditions, the entire committee must agree on the required conditions, and if they cannot, the dean decides. The deadline to meet conditions is three months after the defense date, unless the committee unanimously agrees to reduce it. If the conditions will take three months or more, or more than one member casts a negative vote, one retake of the defense is permitted. The deadline to complete the retake is as decided by the defense committee with a maximum of six months after the defense date, unless the committee unanimously agrees to change it. Students who fail without retake or who fail the retake will be dismissed from the University.

Evaluation of the Ph.D. dissertation defense is recorded by submitting the result of the Ph.D. dissertation defense examination form within three days after the defense to the Office of the Registrar.

Ph.D. Dissertation Submission

The submitted written dissertation must comply with the University formatting guidelines which are available on the KAUST Library website.

Material Science and Engineering (MSE)

Aims and Scope

The Material Science and Engineering (MSE) program is designed to equip students with fundamental and applied knowledge of materials. The program goal is to prepare students to tackle grand challenges in sustainability and alternative energy, nanotechnology and nano-electronics, biomaterials, materials characterization, and low-power computing. The program also aims to support KAUST existing research centers, such as the solar, membrane, catalysis, combustion, and desalination centers.

Program Contacts

Stefaan De Wolf, Program Chair
Mazen Mero, Graduate Student Advisor

Material Science and Engineering M.Sc. Program

The Master of Science (M.Sc.) degree is awarded upon successful completion of a minimum of 36 credit hours with a minimum of 3.0 cumulative GPA. Individual

courses require a minimum of a B- for course credit. Students are expected to complete the M.Sc. degree in three semesters. Satisfactory participation in every KAUST summer session is mandatory.

Before students start creating their study plan, students will be required to take the program assessment test.

Assessment Test

Students are admitted to KAUST from a wide variety of programs and backgrounds. To facilitate the design of an appropriate study plan for each individual student, all M.Sc. and M.Sc./Ph.D. incoming students will be required to take an assessment during orientation week. There is no grade for the assessment. The purpose of the assessment is to determine whether students have mastered the prerequisites for undertaking graduate level courses taught in the program. The academic advisor uses the results of the assessments to design a study plan with a list of courses aimed at addressing content areas that may impede students from successful completion of the degree requirements. More information regarding the assessment test is available on MSE Academics webpage.

M.Sc. Degree Requirements

The M.Sc. degree has the following components:

- Core courses (12 credits)
- Elective courses (12 credits)
- Graduate seminar (MSE 398) (non-credit)
- Completion of one Winter Enrichment Program (WEP)
- Research/capstone experience (12 credits)

Core Courses (12 credits)

The MSE core courses are designed to provide students with the background needed to establish a solid foundation in the program area. M.Sc. students are required to complete 12 credits (4 courses) to fulfill the core requirements. Students must select 9 credits (3 courses) from the following list of core courses. The remaining 3 credits must be obtained by successful completion of MSE 200 - Advanced Engineering Mathematics or an AMCS 200/300-level course.

It is the responsibility of students to plan their graduate program in consultation with their academic advisor. Students should be aware that most core courses are offered only once per year.

MSE Core Courses

MSE 221	Crystallography and Diffraction	3
MSE 225	Electronic Properties of Materials	3
MSE 226	Thermodynamics of Materials	3
MSE 227	Applied Quantum Mechanics	3
MSE 228	Materials Characterization	3
AP 220	Statistical Physics	3
AP 228	Advanced Quantum Mechanics	3

Elective Courses (12 credits)

The elective courses are designed to allow students to tailor their educational experience to meet individual research and educational objectives. M.Sc. students are required to successfully complete 12 credits (4 courses). With the consent of the academic advisor, MSE courses and courses from other academic programs will count toward the elective requirements. However, a minimum of 6 credits equivalent to two elective courses must be obtained from MSE courses. Research credits, internship credits, and IED courses will not count toward electives.

Graduate Seminar (MSE 398)

M.Sc. students are required to register in three MSE graduate seminar series offered each semester and receive a satisfactory (S) grade to fulfill the seminar requirements for the M.Sc. degree.

Winter Enrichment Program

Students are required to satisfactorily complete at least one full Winter Enrichment Program (WEP).

Research/Capstone Experience (12 credits)

The research/capstone experience requirements varies depending on the master's degree option M.Sc. students choose to pursue, master's non-thesis or master's thesis.

M.Sc. Thesis

Designation of Thesis Advisor

The first step for students planning to apply for thesis is to identify an M.Sc. academic (thesis) advisor. Students are required to select a faculty member affiliated with the program to supervise the thesis research. The list of faculty members affiliated with the MSE program is available on the Material Science and Engineering program home page, [click here](#).

Students may choose to do thesis research with a non-

affiliated faculty member. The potential non-affiliated academic (thesis) advisor must seek for the MSE program's approval to become a project-affiliated advisor for this specific thesis project before commencing the research work.

Application for M.Sc. Thesis Track

Students wishing to do thesis research must submit the M.Sc. thesis application to change to the M.Sc. thesis track. Students can apply to change track as early as their second semester. However a minimum of 3.2 cumulative GPA is required to apply.

Thesis Credit Registration

Thesis students are required to complete a minimum of 12 credits of thesis research (MSE 297). Students are permitted to register for more than 12 credits of M.Sc. thesis research as necessary, and with the permission of the academic (thesis) advisor.

M.Sc. Thesis Timeline and Extension

M.Sc. thesis students and their academic advisors need to define the thesis timeline at the time the thesis application is submitted. Students are expected to complete the M.Sc. thesis degree requirements by the end of their second fall semester (third semester).

M.Sc. thesis students may apply to extend into the spring semester (fourth semester) by submitting the request for time extension to complete M.Sc. thesis.

Thesis Defense and Submission

M.Sc. thesis students are expected to form a thesis examination committee, defend their thesis, and submit a written thesis document to complete the thesis research requirements.

M.Sc. Thesis Committee Formation

Once the thesis is ready to be examined/defended, students have to form the thesis examination committee and to set the date for the oral defense.

Students are required to submit the thesis formation committee form at the beginning of the semester in which they intend to defend the thesis.

Thesis Committee Members Selection Criteria

The thesis defense committee must consist of at least three members and typically includes no more than four members as:

Member	Role	Program Status
1	Committee Chair	MSE affiliated faculty member
2	KAUST faculty	MSE affiliated faculty member
3	KAUST faculty	Non-affiliated faculty member
4	Additional faculty or research scientist	Inside or outside KAUST

Notes:

- Members 1-3 are required, member 4 is optional
- Member 1: committee chair must be MSE faculty member or KAUST faculty member affiliated with MSE program
- Member 2: must be MSE faculty member
- Member 3: KAUST faculty member not affiliated with the program
- Co-chairs may serve as member 2, 3, or 4, but may not be a research scientist
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 4 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 4

Thesis Defense

An oral defense of the M.Sc. thesis is required, although it may be waived by the dean's office under exceptional circumstances. Public presentation and all other details related to the format of the oral defense are left to the discretion of the thesis committee.

The oral thesis defense must be completed two weeks before the last day of classes of the graduating semester. Students must set the date of the thesis defense with the committee members by the time they submit their thesis committee formation form.

Thesis Document

Students must follow the KAUST Thesis and Dissertation

Guidelines available on the KAUST Library website when they write their thesis.

The division recommends that students submit the thesis to the examining committee no later than two weeks prior to the defense. However, the committee chair sets the final requirement for the submission timeline.

Thesis Defense Evaluation

Students defending their thesis will receive one of these two outcomes, pass or fail. A pass is achieved when the committee agrees with no more than one dissenting vote, otherwise the outcome is a fail.

In case of a pass, students are required to send a copy of the M.Sc. thesis approval form within two days after the thesis defense to the GPC.

In the case of a fail, the thesis supervisor must inform the GPC immediately to take the necessary action.

M.Sc. Non-Thesis

The non-thesis option requires students to complete a total of 12 research/capstone credits. A minimum of 6 credits of directed research (299) are required. Summer internship credits may be used to fulfill the research requirements.

Students must complete the remaining credits through one or a combination of the options listed below:

- Broadening experience courses: courses that broaden a student's M.Sc. experience
- Ph.D. level courses: courses denoted as 300 level

M.Sc. non-thesis students are required to take 200 or 300 level courses to complete the remaining 6 credits (two courses). Any course offered by the university, including IED courses, will count toward the requirements.

Replacing the courses with research or summer internship credits is not permitted.

Material Science and Engineering Ph.D. Program

The Doctor of Philosophy (Ph.D.) degree is designed to prepare students for research careers in academia and industry.

There is a minimum residency requirement at KAUST of

three and a half years for students entering with a bachelor's degree and two and a half years for students entering with a master's degree. A minimum GPA of 3.0 must be achieved to graduate.

The Ph.D. degree includes the following steps:

- Securing an academic advisor
- Successful completion of program coursework
- Passing the qualifying examination
- Passing the dissertation proposal defense to obtain candidacy status
- Preparing, submitting, and successfully defending a doctoral dissertation

Designation of Academic Advisor

The academic advisor must be a full-time program-affiliated assistant, associate or full professor at KAUST. The list of faculty members affiliated with MSE program is available on the program website.

Students may also select a non-affiliated advisor from another program at KAUST. The academic advisor may request to become a project-affiliated advisor for the specific dissertation project upon program level approval. Project affiliation approval must be completed prior to commencing research.

Ph.D. Course Requirements

The required coursework varies for students entering the Ph.D. degree program with a bachelor's degree or a relevant master's degree. Students holding a bachelor's degree must complete all program core/mandatory courses and elective courses outlined in the master's degree section and are also required to complete the Ph.D. courses below. Students entering with a bachelor's degree will qualify to earn a master's degree by satisfying the master's degree requirements.

Students entering the Ph.D. degree with a relevant M.Sc. degree must complete the requirements below, though completion of additional courses may be requested by the academic advisor.

Ph.D. Courses

- Students entering KAUST with a relevant master's degree must complete at least four courses, two of which must be 300-level courses. Students entering KAUST with a bachelor's degree are required to take

two 300-level courses in addition to the M.Sc. degree coursework requirements. Individual courses require a minimum of a B- for course credit.

- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for four semesters of the MSE program’s graduate seminar.
- Winter Enrichment Program (WEP) – students are required to satisfactorily complete at least one full Winter Enrichment Program (WEP). Students who completed WEP while earning the M.Sc. are not required to enroll in a full WEP for a second time during the Ph.D.

Ph.D. Candidacy

In addition to the coursework requirements, students must successfully complete the required Ph.D. qualification milestones to progress towards Ph.D. candidacy status. These milestones consist of the subject-based qualifying examination and Ph.D. proposal defense.

Ph.D. Qualifying Examination

The purpose of the subject-based qualifying exam is to test students’ knowledge of the subject matter within the field of study.

All students entering the Ph.D. program with a bachelor’s degree must take this examination within two years of their admission. Students admitted to the program with a master’s degree must take this exam within one year.

The requirements to complete the MSE qualifying exam are available on the MSE academics webpage.

Ph.D. Dissertation Proposal

The dissertation proposal defense is the second of the qualification milestones that must be completed to become a Ph.D. candidate. The purpose of the dissertation proposal defense is to demonstrate that students have the ability and are adequately prepared to undertake Ph.D. level research in the proposed area. This preparation includes necessary knowledge of the chosen subject, a review of the literature and preparatory theory or experiment as applicable.

Ph.D. students are required to complete the dissertation proposal defense within one year after passing the qualifying exam. The proposal defense date will be determined by students and their academic advisor.

Ph.D. students are expected to form the Ph.D. dissertation proposal defense committee, and present the dissertation proposal.

Formation of Ph.D. Proposal Defense Committee

Ph.D. students must submit the request to form dissertation committee and to present a Ph.D. proposal at least two weeks prior to the Ph.D. proposal defense date.

The Ph.D. dissertation proposal defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than five members. The criteria to select the committee members are as follows:

Member	Role	Program Status
1	Chair	MSE affiliated faculty member
2	Faculty	MSE affiliated faculty member
3	Faculty	Non-affiliated faculty member
4	Faculty or approved research scientist	Inside KAUST (optional)
5	Faculty	Inside or outside KAUST (optional)

Notes:

- Members 1-3 are required, member 4 and 5 are optional
- Co-chairs may serve as members 2 or 3
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2 or 3 depending upon their affiliation with the student’s program, they may also serve as co-chairs

Once constituted, the composition of the proposal committee can only be changed with the approval of both the academic advisor and the dean.

Ph.D. Dissertation Proposal Defense

The dissertation proposal defense includes two aspects: a written research proposal and an oral research proposal defense.

There are four possible outcomes of the dissertation proposal defense:

- Pass
- Pass with conditions
- Retake
- Fail without retake

A pass is achieved when the committee agrees with no more than one dissenting vote. In the instance of a pass with conditions, the entire committee must agree on the required conditions and if they cannot, the dean decides. The deadline to complete the conditions is three months after the defense date, unless the committee unanimously agrees to change it. In the instance of a fail without retake, the decision of the committee must be unanimous. Students who fail without retake or who fail the retake will be dismissed from the University.

The outcome of the Ph.D. dissertation proposal defense is recorded by submitting the Ph.D. dissertation proposal evaluation form within three days after the proposal defense date.

Ph.D. Dissertation Final Defense

The Ph.D. dissertation defense is the final milestone of the degree. Ph.D. students are required to complete the following to earn the degree:

- Form Ph.D. dissertation committee and petition to defend Ph.D. dissertation
- Defend Ph.D. dissertation
- Submit Ph.D. dissertation

Petition to Defend Ph.D. Dissertation and Formation of Dissertation Committee

Students must determine the defense date with the consent of all the members of the dissertation committee, meet deadlines for submitting the graduation forms and inform the committee of their progress. It is the responsibility of students to submit the required documents to the GPC at the beginning of the semester they intend to defend, or two months before the date of the final defense. The required documents include (i) the list of proposed committee members, including the external examiner (and a CV of the external examiner), (ii) a current CV of the student, (iii) a current transcript, (iv) a list of publications, and (v) a final draft of the Ph.D. dissertation. It is expected that students submit their written dissertation to the committee about the

same time as submitting the petition form.

Formation of Ph.D. Final Defense Committee

The Ph.D. dissertation defense committee, which must be approved by the dean, must consist of at least four members, one of which must be an external to KAUST, and typically includes no more than six members. The external examiner is not required to attend the defense, the attendance of the external examiner is left to the discretion of the Ph.D. academic advisor.

The external examiner is expected to review the dissertation and to send a report that includes recommendations and questions prior to the final defense.

The criteria to select the committee members are as follows:

Member	Role	Program Status
1	Chair	MSE affiliated faculty member
2	Faculty	MSE affiliated faculty member
3	Faculty	Non-Affiliated faculty member
4	External examiner	Outside KAUST
5	Approved research scientist	Inside KAUST (optional)
6	Additional faculty	Inside or outside KAUST (optional)

Notes:

- The chair cannot be the academic advisor
- Members 1-4 are required, members 5 and 6 are optional
- Co-chairs may serve as either members 2, 3 or 6
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 6 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 6, but not as

the external examiner

The only required commonality with the proposal committee is the academic advisor, although it is expected that other members will be carried forward to this committee.

Co-supervisors can be considered one of the above four members required, provided they come under the categories listed (i.e. meet the requirements of the position).

View a list of faculty and their affiliations here.

Ph.D. Dissertation Defense

The Ph.D. dissertation final defense is a public presentation that consists of an oral defense followed by a Q&A and a closed committee examination. The defense may last maximum three hours.

There are four possible outcomes of the dissertation final defense:

- Pass
- Pass with conditions
- Retake
- Fail without retake

A pass is achieved when the committee agrees with no more than one dissenting vote. In the instance of a pass with conditions, the entire committee must agree on the required conditions, and if they cannot, the dean decides. The deadline to meet conditions is three months after the defense date, unless the committee unanimously agrees to reduce it. If the conditions will take three months or more, or more than one member casts a negative vote, one retake of the defense is permitted. The deadline to complete the retake is as decided by the defense committee with a maximum of six months after the defense date, unless the committee unanimously agrees to change it. Students who fail without retake or who fail the retake will be dismissed from the University.

The evaluation of the Ph.D. dissertation final defense is recorded by submitting the Ph.D. dissertation defense examination form within three days after the defense date.

Ph.D. Dissertation Submission

Students are required to follow the KAUST Thesis and Dissertation Guidelines available on KAUST Library website when they write their dissertation.

Student may seek the help of the Writing Center for editorial assistance while writing their dissertation. Students can book a time by sending an email to Skills Lab, skillslab@kaust.edu.sa.

Once the post-examination corrections required by the dissertation committee and the format of the dissertation have been checked and finalized, Ph.D. students must submit the final draft of the dissertation to the program to conclude the submission process.

Mechanical Engineering (ME)

Aims and Scope

The Mechanical Engineering (ME) program at KAUST aspires to become a world leading ME program by focusing on cutting-edge basic and applied research in the following areas: structures and mechanics of solids, composite materials, fluid dynamics, thermal sciences, combustion, renewable energy, control and dynamics. Furthermore, within each of these research areas, the emphasis is on interdisciplinary research and collaborative research with top-tier institutions around the globe. The ME program also engages with the various research centers at KAUST, particularly the Clean Combustion Research Center.

The ME program course curriculum is rigorous and courses in the program provide a solid foundation in each area, covering subjects such as mechanical behavior of engineering materials, continuum mechanics, thermodynamics, experimental and numerical combustion, computational fluid dynamics and control theory. Our graduates are technically well trained to be productive members of the world society at large and specifically suited for research careers in academia, industry and government research laboratories.

Program Contacts

Aamir Farooq, Program Chair
Emmanuelle Sougrat, Graduate Student Advisor

More information can be found on the Mechanical Engineering website here.

Mechanical Engineering M.Sc. Program

It is the responsibility of students to plan their graduate program in consultation with their academic advisor. Students are required to meet all deadlines. Students should be aware that most core courses are offered only once per year.

The Master of Science (M.Sc.) degree is awarded upon successful completion of a minimum of 36 credit hours. A

minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of B- grade for course credit. Students are expected to complete the M.Sc. degree in three semesters (excluding summer session). However, satisfactory participation in every KAUST summer session is mandatory.

The M.Sc. Requirements

- Core courses (12 credits)
- Mathematical requirement (6 credits)
- Elective courses (6 credits)
- Research/capstone experience (12 credits)
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for every semester of the program they attend. Failure to do so may result in academic probation and/or dismissal.
- Completion of one Winter Enrichment Program (WEP)

Core Courses (12 credits)

The core courses are designed to provide students with the background needed to establish a solid foundation in the program area. To complete these 12 credit hours in mechanical engineering, students should register for four core courses from the following list:

ME 200A	Incompressible Flows	3
ME 200B	Viscous and Unsteady Flows	3
ME 211A	Mechanics of Structures and Solids	3
ME 211B	Homogenization and Upscaling Techniques in Solid Mechanics	3
ME 212	Continuum Mechanics	3
ME 221A	Linear Control Systems	3
ME 221B	Non Linear Control Systems	3
ME 222A	Mechatronics and Microsystems	3
ME 222B	Mechatronics and Intelligent Systems	3
ME 232	Advanced Dynamics	3
ME 241	Classical Thermodynamics	3
ME 242	Theoretical and Numerical Heat Transfer	3

Mathematics Requirement (6 credits)

At least two graduate-level courses (i.e., courses numbered

200 and higher) in applied mathematics or statistics are required. It is recommended that students take Applied Mathematics I and II (AMCS 201 and 202), as these courses provide a strong foundation in applied mathematics which is essential for a research career in ME.

To complete these six credits, students should register for two AMCS or STAT courses among those listed in AMCS and STATS master's courses.

Elective Courses (6 credits)

Two graduate-level courses (i.e., courses numbered 200 and higher) must be chosen with the approval of the academic advisor. To complete these 6 credits, students should register for two elective courses from any academic program, though the students are encouraged to take these elective courses from the ME course list, as listed below.

ME 214/ERPE 270	Experimental Methods	3
ME 226/ECE 263	Cyber-Physical Systems	3
ME 243	Statistical Thermodynamics	3
ME 244	Combustion Fundamentals	3
ME 252	Fundamentals of Circular Carbon Strategies	3
ME 253	Sustainable Thermal Technologies	3
ME 254	Renewable Fluid Power	3
ME 256	Electrochemical Energy Systems	3
ME 261	Applications of Atmospheric Pressure Plasmas	3
ME 302	Multi-Phase Flows	3
ME 304	Experimental Methods in Fluid Mechanics	3
ME 305A	Computational Fluid Dynamics	3
ME 305B	Advanced Computational Fluid Dynamics	3
ME 306	Hydrodynamic Stability	3
ME 307	Turbulence	3
ME 317	Mechanics of Composite Materials and Structures	3
ME 319	Computational Solid Mechanics	3
ME 320	Nonlinear Systems	3
ME 326	Robust Control	3
ME 340	Advanced Combustion Theory	3
ME 342	Chemical Kinetics	3
ME 346	Turbulent Combustion	3
ME 348	Introduction to Spectroscopy	3

	and Laser Diagnostics	
ME 376	Introduction to Combustion Engines	3
ME 377	Advanced Internal Combustion Engines	3
ME 378	Experimental Combustion	3
ME 394	Contemporary Topics in Mechanical Engineering	3

The elective courses (which exclude research, internship credits, and IED courses) are designed to allow students to tailor their educational experience to meet individual research and educational objectives, with the permission of the academic advisor. Innovation and Economic Development (IED) courses are meant as a broadening experience and are not technical electives. Students should consult with their program to ensure credits can be applied toward their degree.

M.Sc. Thesis

Students wishing to pursue thesis option must secure the approval of an academic advisor who will supervise the thesis work. Student should register for a minimum of 12 credits of ME 297 (thesis research).

An oral defense of the M.Sc. thesis is required. Public presentation and all other details related to the format of the oral defense are left to the discretion of the thesis committee. The thesis defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than four members. At least two of the required members must be KAUST faculty. The chair plus one additional faculty member must be affiliated with the student's program. This membership can be summarized as:

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty or approved research scientist	Outside program
4	Additional faculty or research scientist	Inside or outside KAUST

Notes:

- Academic advisors may serve as the chair
- Members 1-3 are required, member 4 is optional
- Co-chairs may serve as member 2, 3, or 4, but may not be a research scientist

- Faculty members holding secondary affiliation with ME may serve as member 1 or 2 but not as member 3
- Adjunct professors and professor emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2, 3 or 4 depending upon their affiliation with the student's program, they may also serve as co-chairs
- Visiting professors may serve as member 4

View a list of faculty and their affiliations here.

M.Sc. Non-Thesis

Students wishing to pursue the non-thesis option must complete a total of 12 capstone credits, with a minimum of 6 credits of directed research (299).

Students must complete the remaining 6 credits through one or a combination of the options listed below:

- Broadening experience courses: courses that broaden a student's M.Sc. experience. These include any graduate-level (i.e., courses numbered 200 or higher) courses offered at the university and the IED courses.
- Internship: summer internship (295) – students are only allowed to take one internship. The internship must be pre-approved by the academic advisor. The academic advisor may require an internship report from the student at the completion of the internship. The report must demonstrate the research carried out during the internship.
- Ph.D. courses: courses numbered at the 300 level

Mechanical Engineering Ph.D. Program

The Doctor of Philosophy (Ph.D.) degree is designed to prepare students for research careers in academia and industry.

There is a minimum residency requirement at KAUST of three and a half years for students entering with a bachelor's degree and two and a half years for students entering with a master's degree. The ME program expects that Ph.D. and M.Sc./Ph.D. students will complete their degrees within four and five years, respectively. A minimum GPA of 3.0 must be achieved to graduate. Individual courses require a minimum of B- grade for course credit.

The Ph.D. degree includes the following steps:

- Securing an academic advisor
- Successful completion of program coursework
- Passing the qualifying examination
- Passing the dissertation proposal defense to obtain candidacy status
- Preparing, submitting and successfully defending a doctoral dissertation

Securing an Academic Advisor

Students are responsible for finding an academic advisor, and in consultation with this advisor, identifying research topics that are appropriate and adequate for a doctoral dissertation in mechanical engineering. Students will be admitted to Ph.D. or M.Sc./Ph.D. programs only after a faculty member has agreed to be their academic advisor. Students currently enrolled in a master's program at KAUST and wishing to continue with Ph.D. studies must obtain the consent of a faculty member to supervise their Ph.D. work, and, thereafter, submit an application to the University Admission Office for admission to the Ph.D. program.

Ph.D. Course Requirements

The required coursework varies for students entering the Ph.D. degree with a bachelor's degree or a relevant master's degree. Students holding a bachelor's degree must complete all program core courses and elective courses, outlined in the master's degree section, and are also required to complete the Ph.D. courses below. Students entering with a bachelor's degree will qualify to earn a master's degree by satisfying the master's degree requirements.

Students entering the Ph.D. degree with a relevant M.Sc. degree must complete the requirements below, though additional courses may be required by the academic advisor.

Ph.D. Courses

- Four courses are required: two ME 300 level courses, one 200 level or higher course in AMCS or STATS, one 200 level or higher elective course.
- Graduate seminar 398 (non-credit) – all students are required to register and receive a satisfactory grade for every semester of the program they attend. Failure to do so may result in academic probation and/or

dismissal.

- Completion of one Winter Enrichment Program (WEP) – students who completed WEP while earning the M.Sc. are not required to enroll in a full WEP for a second time during the Ph.D.

Ph.D. Candidacy

In addition to the coursework requirements, students must successfully complete the required Ph.D. candidacy milestones to progress towards Ph.D. candidate status. These milestones consist of the subject-based qualifying examination and Ph.D. proposal defense. Once students have advanced to candidacy, students are designated as Ph.D. or doctoral candidates.

Ph.D. Qualifying Examination

All ME Ph.D. students must pass an oral comprehensive subject examination (also known as the Ph.D. qualifying examination) within the stipulated time frame.

Schedule

This qualifying examination will be given twice a year during a single time window. This window is approximately a week in length: the beginning of spring semester and fall semester.

Timeline

1. Ph.D. students (who already have an M.Sc. degree) must pass the exam within 18 months of the start of their Ph.D. studies in the ME program at KAUST. These students should, therefore, plan on making their first attempt within the first year of their Ph.D. studies.
2. MS/PhD students (who have a bachelor's degree) must pass the exam within 24 months of the start of their studies in the ME program at KAUST. These students should, therefore, plan on making their first attempt within the first year and a half of their studies.

Subjects

The exam will comprise of one oral examination in mathematics and two oral examinations in any of the following areas: (a) fluid mechanics, (b) solid mechanics, (c) control and dynamics, and (d) heat transfer and thermodynamics. The exam in each area will include common questions to be asked of all students who have selected that area. In addition, the examination will extend beyond the common questions to test students' ability in

their major area of interest. Students may petition the ME program to replace one of the specified areas (other than mathematics) with an area that is not on the list and is not a subspecialty of one of the listed areas. Examples of "other areas" that might be appropriate are biomechanics and scientific computation, to mention only two.

Multiple Attempts

At the first attempt, students must attempt the exams in all three subjects simultaneously. In the event students fail the qualifying examination in one or more subjects, then at most one additional attempt (in the failed subject) will be allowed at the discretion of the ME faculty.

Format

All examinations will be closed book and closed notes. The exam is forty-five minutes in length, preceded by a fifteen-minute period during which students will be allowed to review the written questions for that exam. The fifteen minute period is for students to collect their thoughts and there will be no consultation of reference material. Students may write some notes during this time to bring into the exam. The examiners will probe more deeply into the issues raised in the questions.

Notification by Ph.D. Students

At least one month prior to the examination, students must notify the GPC in writing of their choice of the two subject areas (other than mathematics) for the exam.

Subject Contents

While the exam in each subject area need not be limited to the content of any particular course, the nominal level of preparation for the exam is suggested by the courses appearing opposite each area listed in Table 1.

Table 1: Subject Areas for the Candidacy Examination

Mathematics – compulsory	AMCS 201, AMCS 202
Fluid Mechanics	ME 200A, ME 200B
Solid Mechanics	ME 211A, ME 212A
Thermodynamics and Heat Transfer	ME 241, ME 242
Control and Dynamics	ME 221A, ME 232

Subject area descriptions which detail the topics from which exam questions may be drawn are available on the ME website here.

Ph.D. Proposal Defense

In addition to the subject component of the qualifying examination, Ph.D. students must also pass the research component examination (Ph.D. proposal defense). This exam should take place within one year of students passing the subject component of the qualifying examination. Failure to complete the exam in the stipulated time frame may result in academic probation and/or dismissal. The exam essentially consists of two items (with more details given below):

- Proposal: submission of a 10-page proposal to the examining committee at least 10 days prior to the scheduled presentation
- Presentation: approximately 30 minutes duration on the dissertation topic is required by the examining committee

Students should submit a 10-page proposal document (note: the number of pages is a recommendation and not a strict requirement) to the three members of the committee at least 10 days before the examination. The proposal should describe the proposed topic of research, relevant survey of the literature and any preliminary results or laboratory preparation.

Students should make a *half-hour* oral presentation of the research proposal, followed by questions from the committee consistent with the scope of the examination. The examination is expected to last approximately one hour. The exam is not open to the public.

Scope of the Examination

The scope of this examination is to demonstrate that students have the ability and are adequately prepared to undertake Ph.D. level research in the proposed area. This preparation includes necessary knowledge of the chosen subject, a review of the literature and preparatory theory or experiment as applicable. It is not necessary to have final results, a working computer program, a functioning piece of equipment or fully analyzed data. It is also not necessary to present a definitive dissertation outline.

Scheduling

Students should schedule the examination at a time acceptable to the committee within one year of passing the subject component of the qualifying examination. For any special circumstances, extensions must be approved by the program chair at least one month prior to the deadline.

Examination Committee

The Ph.D. dissertation proposal defense committee, which must be approved by the dean, must consist of at least three members and typically includes no more than six members. The chair, plus one additional faculty member must be affiliated with the student's program. Students should propose the committee, in consultation with the advisor, in writing to the GPC. Students are advised to seek the consent of the members before proposing them. The relevant form must be submitted at least two weeks prior to the scheduled proposal defense.

Member	Role	Program Status
1	Chair	Within Program
2	Faculty	Within Program
3	Faculty	Outside Program
4	Approved Research Scientist	Inside KAUST

Notes:

- Members 1-3 are required, member 4 is optional
- Academic advisor may serve as chair
- Faculty members holding secondary affiliation with ME may serve as member 1 or 2 but not as member 3
- Adjunct professors and professor emeriti may retain their roles on current committees, but may not serve as chair on any new committees
- Professors of practice and research professors may serve as members 2 or 3 depending upon their affiliation with the student's program, they may also serve as co-chairs

Once constituted, the composition of the proposal committee can only be changed with the approval of both the academic advisor and the dean.

View a list of faculty and their affiliations here.

Results

The examination committee can make one of four recommendations. These must be recorded on the Ph.D. Proposal Evaluation form.

1. Pass. This recommendation is made if students satisfy the criterion that forms the scope of this examination.
2. Pass subject to remedial action. This recommendation is made if students satisfy the criterion that forms the scope of this examination except for an isolated deficiency. No further examination is required. The examination committee will propose the remedial action, specify criteria to demonstrate that students have taken this action and a time-table to complete this action. Examples include but are not limited to (a) taking an additional course or (b) conducting additional literature survey in a specified area.
3. Fail with an option for re-examination. This recommendation is made if students fail to satisfy the criterion that form the scope of this examination, but the committee judges that students may be able to do so in the future with additional study. The examination committee will propose when the re-examination is offered; this date cannot be later than six months from the time of the examination.
4. Fail. This recommendation is made if students fail to satisfy the criterion that form the scope of this examination, and if the examination committee judges the deficiencies are so serious that students are unlikely to be able to do so in a re-examination.

The chair of the examination committee will notify the GPC of the recommendation. The final decision will be made by the associate dean. If the decision of the committee is

1. Pass, then students will be accepted to Ph.D. candidacy on fulfillment of the remaining requirements.
2. Pass subject to remedial action, then students will be accepted to candidacy on fulfillment of remaining requirements and the remedial action.
3. Fail with an option for re-examination, then the committee will specify the time table for the re-examination; this cannot be later than six months from the time of the examination. Further, the associate dean will suggest a faculty member (chair of the examination committee, academic advisor or another faculty member, as appropriate) to provide feedback to students regarding the examination and also to counsel students regarding the reexamination. The result of any re-examination can only be a pass or fail (with no second reexamination).
4. Fail, students will not be allowed to continue in the

Ph.D. program.

Ph.D. Dissertation Progress

After passing the subject- and research-components of the qualifying exam, students become Ph.D. candidates. It is the responsibility of students to keep making steady and timely progress towards the goals set forth for Ph.D. dissertation work. The progress is overseen on a regular basis by the academic advisor. It is recommended (not required) that students update, typically every semester, the Ph.D. Proposal Committee members with regards to their progress. If students are having serious problems with dissertation work and the issues are not resolved by the academic advisor, students must inform the GPC and seek help from other members of the Proposal Committee and/or the associate dean.

Ph.D. Dissertation Defense

This is final and most important stage of students' Ph.D. journey. In consultation with the academic advisor, students will target a specific semester for dissertation submission and defense.

Ph.D. Dissertation

The Ph.D. dissertation must contain original results demonstrating students' scholarly activities during the course of the PhD. The dissertation must conform to the University library guidelines for Ph.D. dissertation. The student must be fully aware of what is considered plagiarism and must avoid all forms of plagiarism. The Ph.D. dissertation must be written in fluent high-quality English using proper language, style, and appropriate methods of scientific reasoning. Parts of the dissertation research should have been presented at international conferences. The dissertation research must lead to high quality scientific publications in international peer-reviewed journals, ideally leading journals of the field. The ME program expects that at least one such journal publication has appeared in print before the scheduling of the Ph.D. dissertation defense. In the introductory part of the dissertation, students must list all scientific publications coming out of their work. For each publication, students must indicate the contributions made by the key co-authors.

Petition to Defend

Students must submit the following to the GPC at least two months prior to the scheduled defense date or by the second week of the semester (whichever is earlier):

- Petition form signed by all committee members

- Draft of the Ph.D. dissertation
- Current transcript
- Current CV
- A list of publications

Dissertation Submission to the Committee

Students must send the final draft of the dissertation to all committee members and GPC at least four weeks prior to the scheduled defense. If the dissertation is not sent by this deadline, the defense will have to be rescheduled with a new petition form.

Ph.D. Dissertation Committee

The Ph.D. dissertation defense committee, which must be approved by the dean, must consist of at least four members and typically includes no more than six members. At least three of the required members must be KAUST faculty and one must be an external examiner who is external to KAUST. The chair, plus one additional faculty member must be affiliated with the student’s program. It is expected that the Ph.D. proposal committee members will be part of the Ph.D. dissertation committee due to their familiarity with the dissertation work.

Member	Role	Program Status
1	Chair	Within program
2	Faculty	Within program
3	Faculty	Outside program
4	External examiner	Outside KAUST
5	Approved research scientist	Inside KAUST
6	Additional faculty	Inside or outside KAUST

Notes:

- Members 1-4 are required, members 5 and 6 are optional
- Academic advisor **cannot** serve as the chair
- Faculty members holding secondary affiliation with ME may serve as member 1 or 2, but not as member 3
- Adjunct professors and professors emeriti may retain their roles on current committees, but may not serve as chair on any new committees

- Professors of practice and research professors may serve as members 2, 3 or 6 depending upon their affiliation with the student’s program, they may also serve as co-chairs
- Visiting professors may serve as member 6, but not as the external examiner

Co-supervisors can be considered one of the above four members required, provided they come under the categories listed (i.e., meets the requirements of the position).

View a list of faculty and their affiliations here.

External Examiner

The academic advisor is responsible for nominating a well-qualified, objective, and experienced individual who is not a permanent faculty at KAUST. The specific qualifications of an external examiner are:

- Holds a Ph.D.
- Has previous experience with supervision and examination of doctoral students
- Has an established reputation in the area of the dissertation research and is able to judge whether a dissertation is acceptable
- Should be of either full or associate professor rank at a university, or have comparable expertise and standing if not at a university. If not presently associated with a university, nominees should have some previous university affiliation
- Attachment of a bio/web link for the associate dean to approve

Proposed external examiners must not be closely associated with Ph.D. candidates as research collaborator, co-author, previous supervisor, through family ties, or the like. External examiners must evaluate the Ph.D. dissertation and inform the chair if the thesis is not ready for defense. In such a case, the defense will be cancelled and rescheduled at a later date. The external examiner must submit their report to the GPC *at least two days* before the scheduled defense. The coordinator will pass this report on to the chair of the dissertation defense committee. The attendance of the external examiner at the oral defense is encouraged but not required. If the external examiner cannot be present, skype video conferencing is required. If the external examiner chooses to attend the Ph.D. defense in KAUST, then travel and lodging costs will be taken care

of by KAUST.

Chair of the Dissertation Defense Committee

The chair of the dissertation defense committee must be from the ME program but not the Ph.D. academic advisor. The responsibilities of the chair are:

- Introduce the Ph.D. candidate and the committee members
- Outline the process followed for the dissertation defense
- Moderate the Q&A session with the general audience during the open session
- Organize the Q&A session with the committee members during the closed session
- Take votes and recommendations of the committee members for the final decision
- Write a short report (1 page) about the Ph.D. dissertation and defense for review by the associate dean within **three days** of the defense

Examination

The examination is divided into an open session and closed session. During the open session, the Ph.D. candidate will describe the dissertation work during a 45-minute (maximum) presentation which may be attended by other students, faculty, staff and student family members. No questions are allowed during the presentation. The student should clearly outline the big picture of the work, state the goals, illustrate the technical work and contributions, and finally conclude with key achievements and future work. Thereafter, the chair of dissertation committee will invite the audience (excluding committee members) to ask questions. This Q&A session is expected to last for no more than 15 minutes. At the conclusion of audience questions, the chair will request the audience to leave the room. The closed session of the exam will then begin where the committee members will ask questions to the Ph.D. candidate. Chairs may organize this session as they deem fit. The closed session of the exam is expected to last anywhere from one to three hours. At the conclusion of committee questions, the Ph.D. candidate will be asked to leave the room. The committee will then discuss their findings and reach a decision either by consensus or by voting. The Ph.D. candidate will then be asked to return to the room where the chair will inform students of the final decision of the committee.

Results

The Ph.D. dissertation committee can make one of four recommendations. These must be recorded on the Ph.D. Dissertation Defense form.

1. Pass. This recommendation is made if the committee agrees that the dissertation is already of high quality and no further changes are needed.
2. Pass with conditions. This recommendation is made if the committee is satisfied by the overall quality of the work but deems certain changes are necessary to be made to the dissertation. The Committee specifies the time period, typically four weeks or less, for students to submit a revised copy of the dissertation to all committee members and GPC. The chair will collect feedback from the committee members and accordingly inform the GPC that the revised dissertation is accepted.
3. Fail with an option for re-examination. This recommendation is made if the committee judges that the dissertation needs major modification with, for example, additional experiments or simulations. The committee will propose when the re-examination is offered, typically within one year.
4. Fail. This recommendation is made if the committee judges that the dissertation has major holes and the deficiencies are so serious that the student is unlikely to overcome those in a reasonable time frame.

The chair of the dissertation committee will notify the GPC of the recommendation. The final decision will be made by the associate dean.

Courses

AMCS - Applied Mathematical and Computational Science

AMCS 101 - Engineering Mathematics (0)

Coordinates, Lines, Circles, Functions and their graphs, Polynomials, trigonometric functions, limits, derivatives, numerical approximation of derivatives, indefinite integrals, the definite integral, the fundamental theorem of calculus, applications of the integral: areas, volumes, numerical integration, transcendental functions, techniques of integration: integration by parts; partial fraction decomposition, substitutions, differential equations of first order, separable equations, numerical integration of differential equations, Euler method, solution of linear differential equations of second order with constant coefficients, Infinite sequences and series, geometric series, convergence tests for series, power series and radius of convergence, Taylor series, approximation of functions by polynomials, exponential, cosine and sine expansions, error bounds. The plane and three-dimensional space, vectors, parametric equations for curves, lines, planes, dot and cross product, functions of several variables, partial derivatives, tangent planes and normals, linear approximation, gradient and the differential.

AMCS 102 - Vector Calculus (0)

This course covers differential, integral and vector calculus for functions of more than one variable. These mathematical tools and methods are used extensively in the physical sciences, engineering, economics and computer graphics. The course covers triple integrals, cylindrical and spherical polar coordinates. Line and surface integrals. Divergence and curl applications, conservative vector fields. Green's, Gauss' and Stokes' theorems applications.

AMCS 107 - Introduction to Programming with Matlab and Mathematica (0)

This course gives an introduction to MATLAB® and Mathematica. It is designed to give students fluency in these two mathematical software. The course consists of interactive lectures with students doing sample programming problems in real time.

AMCS 131 - Vector Calculus and Ordinary Differential Equations (0)

The course is concentrated mostly on Multivariate Calculus and basic ODEs and contains some necessary preliminaries from Single Variable Calculus and Complex Analysis.

AMCS 143 - Introduction to Probability and Statistics (0)

This course provides an elementary introduction to probability and statistics with applications. Topics include: basic probability models; combinatorics; random variables; discrete and continuous probability distributions; statistical estimation and testing; confidence intervals and an introduction to linear regression.

AMCS 151 - Linear Algebra (0)

This is a basic subject on matrix theory and linear algebra. Emphasis is given to topics that will be useful in other disciplines, including systems of equations, introduction to vector spaces, basis and dimension, rank of a matrix, determinants, eigenvalues and diagonalization, similarity, and positive definite matrices. Applications. Orthogonal and unitary matrices and transformations. Orthogonal projections, Gram-Schmidt procedure.

AMCS 162 - Discrete Mathematics (0)

This course covers elementary discrete mathematics for computer science and engineering. It emphasizes mathematical definitions and proofs as well as applicable methods. Topics include formal logic notation, proof methods; induction, well-ordering; sets, relations; elementary graph theory; integer congruence's; asymptotic notation and growth of functions; permutations and combinations, and counting principles.

AMCS 199 - Directed Study in Applied Mathematics (0)

A course of self-study in a particular topic as directed by

faculty and approved by the division.

AMCS 201 - Applied Mathematics I (3)

Prerequisites: Advanced and multivariate calculus and elementary complex variables. AMCS 201 and AMCS 202 may be taken separately or in either order. No degree credit for AMCS majors. Part of a fast-paced two-course sequence in graduate applied mathematics for engineers and scientists, with an emphasis on analytical technique. A review of practical aspects of linear operators (superposition, Green's functions and Eigen analysis) in the context of ordinary differential equations, followed by extension to linear partial differential equations (PDEs) of parabolic, hyperbolic and elliptic type through separation of variables and special functions. Integral transforms of Laplace and Fourier type. Self-similarity. Method of characteristics for first-order PDEs. Introduction to perturbation methods for nonlinear PDEs, asymptotic analysis, and singular perturbations.

AMCS 202 - Applied Mathematics II (3)

Prerequisites: Advanced and multivariate calculus and elementary complex variables. AMCS 201 and AMCS 202 may be taken separately or in either order. No degree credit for AMCS majors. Part of a fast-paced two-course sequence in graduate applied mathematics for engineers and scientists, with an emphasis on analytical technique. A review of linear spaces (basis, independence, null space and rank, condition number, inner product, norm and Gram-Schmidt orthogonalization) in the context of direct and iterative methods for the solution of linear systems of equations arising in engineering applications. Projections and least squares. Eigen analysis, diagonalization and functions of matrices. Complex analysis, Cauchy-Riemann conditions, Cauchy integral theorem, residue theorem, Taylor and Laurent series, contour integration and conformal mapping.

AMCS 206 - Applied Numerical Methods (3)

Prerequisites: Advanced and multivariate calculus. No degree credit for AMCS majors. A fast-paced one-semester survey of numerical methods for engineers and scientists, with an emphasis on technique and software. Computer representation of numbers and floating point errors. Numerical solution of systems of linear and nonlinear algebraic equations, interpolation, least squares, quadrature, optimization, nonlinear equations, approximation of solutions of ordinary and partial differential equations. Truncation error, numerical stability, stiffness, and operation and storage complexity of numerical algorithms.

AMCS 211 - Numerical Optimization (3)

Prerequisites: Advanced and multivariate calculus and elementary real analysis. Solution of nonlinear equations. Optimality conditions for smooth optimization problems. Theory and algorithms to solve unconstrained optimization; linear programming; quadratic programming; global optimization; general linearly and non-linearly constrained optimization problems.

AMCS 212 - Linear and Nonlinear Optimization (3)

Prerequisites: Advanced and multivariate calculus. The role of duality, optimality conditions and algorithms in finding and recognizing solutions. Perspectives: problem formulation, analytical theory, computational methods and recent applications in engineering, finance and economics. Theories: finite dimensional derivatives, convexity, optimality, duality and sensitivity. Methods: simplex and interior-point, gradient, Newton and barrier.

AMCS 231 - Applied Partial Differential Equations I (3)

Prerequisites: Advanced and multivariate calculus and elementary complex variables. First part of a sequence of courses on partial differential equations (PDE) emphasizing theory and solution techniques for linear equations. Origin of PDE in science and engineering. Equations of diffusion, heat conduction and wave propagation. The method of characteristics. Classification of PDE. Separation of variables, theory of the Fourier series and Fourier transform. The method of Green's functions. Sturm-Liouville problem, special functions, Eigen function expansions. Higher dimensional PDE and their solution by separation of variables, transform methods and Green's functions. Introduction to quasi-linear PDE and shock waves.

AMCS 232 - Weak Solutions of Partial Differential Equations (3)

This is a first course on weak solutions of partial differential equations. The course begins with a brief introduction to distributions and weak derivatives. Next we consider Sobolev spaces and fundamental results: extension and trace theorems, Sobolev and Morrey theorem, Poincare's inequality and Rellich-Kondrachov theorem. Then we examine weak solutions of elliptic equations through Lax-Milgram theorem. The course ends with a discussions of weak solutions of linear evolution equations - second-order linear parabolic equations, linear hyperbolic systems and semigroup methods.

Prerequisite: AMCS 231 or AMCS 201.

AMCS 235 - Real Analysis (3)

Prerequisite: Advanced and multi-variable calculus. This course is an introduction to measure and integration, the theory of metric spaces and their applications to the approximation of real valued functions. It starts with notions of convergence from sequences of continuous functions, the Ascoli- Arzela compactness theorem and the Weierstrass approximation theorem. The main body of the course deals with the theory of measure and integration and limiting processes for the Lebesgue integral. The last part covers the topics of differentiation, functions of bounded variation and Fourier series. The course provides the main background needed in modern Advanced Mathematics related to Real Analysis.

AMCS 237 - Fourier and Wavelet Theory (3)

The course provides a detailed and mathematically precise introduction to Fourier, Wavelet and multiresolution analysis from a computational point of view. This includes algorithmical aspects, complexity analysis, and exemplary applications relevant to scientific and visual computing.

AMCS 241 - Stochastic Processes (3)

(Equivalent to STAT 250) Prerequisites: Advanced and multivariate calculus. Introduction to probability and random processes. Topics include probability axioms, sigma algebras, random vectors, expectation, probability distributions and densities, Poisson and Wiener processes, stationary processes, autocorrelation, spectral density, effects of filtering, linear least-squares estimation and convergence of random sequences.

Crosslisted as: STAT 250.

AMCS 249 - Mathematics for Signal Processing (3)

This course provides necessary mathematical background that is useful to students engaging in research in the field of signal processing. The subjects of the course are also relevant to digital communications and machine learning. The topics include: singular value decomposition, projection, Perron-Frobenius theorem, convex analysis, Karush-Kuhn-Tucker conditions for optimization, discrete Fourier transform and implementation via fast Fourier transform, sparse signal recovery, almost sure convergence, Markov chains and random walks, renewal processes, queueing theory, and random matrix theory.

Prerequisite: AMCS 241.

AMCS 251 - Numerical Linear Algebra (3)

Prerequisites: Programming skills (MATLAB preferred)

and linear algebra. Linear algebra from a numerical solution perspective. Singular Value Decomposition, matrix factorizations, linear least squares, Gram-Schmidt orthogonalization, conditioning and stability, Eigen analysis, Krylov subspace methods and preconditioning and optimization and conjugate gradient methods.

AMCS 252 - Numerical Analysis of Differential Equations (3)

Prerequisites: Familiarity with Taylor series, norms, orthogonal polynomials, matrix analysis, linear systems of equations, eigenvalues, differential equations, and programming in MATLAB or a similar language. The course covers theory and algorithms for the numerical solution of ODEs and of PDEs of parabolic, hyperbolic and elliptic type. Theoretical concepts include: accuracy, zero-stability, absolute stability, convergence, order of accuracy, stiffness, conservation and the CFL condition. Algorithms covered include: finite differences, steady and unsteady discretization in one and two dimensions, Newton methods, Runge-Kutta methods, linear multistep methods, multigrid, implicit methods for stiff problems, centered and upwind methods for wave equations, dimensional splitting and operator splitting.

AMCS 253 - Iterative Methods of Linear and Nonlinear Algebra (3)

Prerequisites: Programming skills (MATLAB preferred) and linear algebra. Classical stationary iterative methods of linear algebra, Chebyshev, multilevel and Krylov subspace iterative methods, preconditioners from approximate factorizations, hierarchical solvers and domain decomposition; Classical nonlinear iterative methods, fixed-point, Newton and its variants, nonlinear Schwarz methods.

AMCS 255 - Advanced Computational Physics (3)

This course covers a selection of advanced topics related to computational physics. Based on prior knowledge in calculus and linear algebra, the following topics are considered: Lagrangian formalism, symmetries and conservation laws, stability and bifurcation, multi-body problems and rigid bodies, linear and nonlinear oscillations, Hamiltonian formalism, canonical transformations and invariances, Liouville's theorem, discrete Lagrangian and Hamiltonian formalisms, Hamilton Jacobi theory, transition to quantum mechanics and relativity fields.

AMCS 271 - Applied Geometry (3)

Differential Geometry: selected topics from the classical theory of curves and surfaces, geometric variational

problems, robust computation of differential invariants, discrete differential geometry. Projective Geometry: computing with homogeneous coordinates, projective maps, quadrics and polarity. Algebraic Geometry: algebraic curves and surfaces, rational parameterizations, basic elimination theory. Kinematical Geometry: geometry of motions, kinematic mappings. The practical use of these topics is illustrated at hand of sample problems from Geometric Modelling, Computer Vision, Robotics and related areas of Geometric Computing.

AMCS 272 - Geometric Modelling (3)

Prerequisites: Advanced and multivariate calculus and linear algebra, computer graphics, and programming experience. Terminology, coordinate systems, and implicit forms. Parametric and spline representations of curves and surfaces and their uses. Basic differential geometry of curves and surfaces. Subdivision surfaces. Solid modelling paradigms and operations. Robustness and accuracy in geometric computations. Applications.

AMCS 293 - Master's Traveling Scholar

Master's level traveling scholar.

AMCS 294 - Contemporary Topics in Applied Mathematics and Computational Science (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

AMCS 295 - Master's Internship (0-12)

Master's level internship.

AMCS 297 - Master's Thesis Research (0-12)

Master's level research leading to a formal written thesis and oral defense.

AMCS 299 - Master's Directed Research (0-12)

Master's level supervised research.

AMCS 303 - Numerical Methods of Geophysics (3)

Built on the modelling and simulation foundation developed in ErSE203, this specialized course will discuss advanced ideas of multi-scale modelling, linear and non-linear finite element methods, investigate modern approaches to numerical simulations of hydrodynamic and geophysical turbulence, problems of theoretical glaciology and material science of ice for the prediction of ice sheet evolution and wave propagation in linear and non-linear media.

Prerequisite: ErSE 203.

AMCS 308 - Stochastic Numerics with Application in Simulation and Data Science (3)

Prerequisites: Basic probability, numerical analysis, and programming. Review of basic probability; Monte Carlo simulation; state space models and time series; parameter estimation, prediction and filtering; Markov chains and processes; stochastic control; Markov chain Monte Carlo. Examples from various engineering disciplines.

AMCS 312 - High Performance Computing (3)

Prerequisites: Experience with Linux and C/C++ and familiarity with basic discrete and numerical algorithms. High performance computing algorithms and software technology, with an emphasis on using distributed memory systems for scientific computing. Theoretical and practically achievable performance for processors memory system, and network, for large-scale scientific applications. The state-of-the-art and promise of predictive computational science and engineering. Algorithmic kernels common to linear and nonlinear algebraic systems, partial differential equations, integral equations, particle methods, optimization and statistics. Computer architecture and the stresses put on scientific applications and their underlying mathematical algorithms by emerging architecture. State-of-the-art discretization techniques, solve libraries and execution frameworks.

AMCS 329 - Finite Elements (3)

This course provides an introduction to the finite element method for the approximation of partial differential equations. The main focus is on the approximation of elliptic equations. During the course the theoretical analysis of the method is presented, including stability, convergence and error estimates. The course provides details on the implementation of the method as well as various examples of applications from science and engineering.

AMCS 330 - Computational Science and Engineering (3)

Prerequisites: Programming experience and familiarity with basic discrete and numerical algorithms and experience with one or more computational applications. Case studies of representative and prototype applications in partial differential equations and mesh-based methods, particle methods, ray-tracing methods and transactional methods.

AMCS 331 - Applied Partial Differential Equations II (3)

Prerequisites: Multivariate calculus, elementary complex variables, ordinary differential equations. Recommended: AMCS 231 or AMCS 201. Second part of a sequence of courses on partial differential equations (PDE) emphasizing theory and solution techniques for nonlinear equations. Quasi-linear and nonlinear PDE in applications. Conservation laws, first-order equations, the method of characteristics. Burgers' equation and wave breaking. Weak solutions, shocks, jump conditions and entropy conditions. Hyperbolic systems of gas dynamics, shallow-water flow, traffic flow and bio-fluid flow. Variational principles, dispersive waves, solitons. Nonlinear diffusion and reaction-diffusion equations in combustion and biology. Traveling waves and their stability. Dimensional analysis and similarity solutions. Perturbation methods. Turing instability and pattern formation. Eigenvalue problems. Stability and bifurcation.

AMCS 332 - Introduction to Mathematical Modelling (3)

An introduction to mathematical modelling through a combination of practical problem-solving experience and applied mathematics techniques, including dimensional analysis, non-dimensionalization, asymptotic expansions, perturbation analysis, boundary layers, computing and other topics.

AMCS 333 - Hyperbolic Conservation Laws and Godunov-type Methods (3)

The course covers theory and algorithms for the numerical solution of linear and nonlinear hyperbolic PDEs, with applications including fluid dynamics, elasticity, acoustics, electromagnetics, shallow water waves and traffic flow. The main concepts include: characteristics; shock and rarefaction waves; weak solutions; entropy; the Riemann problem; finite volume methods; Godunov's method; TVD methods and high order methods; stability, accuracy and convergence of numerical solutions.

Prerequisite: AMCS 231, AMCS 252.

AMCS 334 - Mathematical Fluid Dynamics (3)

Recommended prerequisites: AMCS 331. Equations of fluid dynamics; inviscid flow and Euler equations; vorticity dynamics; viscous incompressible flow and Navier-Stokes equations; existence, uniqueness and regularity of solutions of Navier-Stokes equations; Stokes flow; free-surface flows; linear and nonlinear instability and transition to turbulence; rotating flows; compressible

flow and shock dynamics; detonation waves.

Prerequisite: AMCS 231 or AMCS 201.

AMCS 335 - Multiscale Modelling and Simulation for PDEs (3)

The course will cover some basic multiscale methods as well as some advanced methods for solving partial differential equations with multiple scales. The topics will include: Background, Problems with multiple scales; Difficulties in solving multiscale problems; Homogenization techniques for partial differential equations (PDEs) (with periodic micro-structure); Formal asymptotic analysis; Homogenized media properties. Applications to various PDEs: Effective medium theory (based on homogenization); Simplified theories; Bounds for homogenized coefficients: Numerical homogenization (upscaling) techniques; Slowly varying and non-periodic microstructures; Estimating errors of numerical homogenization: Homogenization for nonlinear operators; Numerical homogenization for nonlinear operators; Multiscale finite element methods; Differences from homogenization/numerical homogenization; Simplified multiscale basis functions.

AMCS 336 - Numerical Methods for Stochastic Differential Equations (3)

Prerequisites: knowledge of basic probability, numerical analysis, and programming. Brownian motion, stochastic integrals and diffusions as solutions of stochastic differential equations. Functionals of diffusions and their connection with partial differential equations. Weak and strong approximation, efficient numerical methods and error estimates. Jump diffusions.

AMCS 338 - Functional Analysis (3)

This course covers topics in Real Analysis and Functional Analysis and their applications. It starts with a review of the theory of metric spaces, the L_p spaces, and the approximation of real functions. It proceeds to the theory of Hilbert spaces, Banach spaces and the main theorems of functional analysis, linear operators in Banach and Hilbert spaces, the spectral theory of compact, self-adjoint operators and its application to the theory of boundary value problems and linear elliptic partial differential equation. It concludes with approximation methods in Banach spaces.

AMCS 343 - Fast Solvers for Large Systems of Equations (3)

Solving systems of algebraic equations is a core task in the numerics of partial differential equations (PDE). After

discretising the PDE with a grid method like finite volumes, finite elements or finite differences, we finally obtain a system of algebraic equations, which is typically sparse and very large. The largest systems currently solved contain up to 10¹² unknowns. To solve such large sparse systems, specialised algorithms are necessary. Since these algorithms are in the core of a lot of simulation programs and all other parts are usually $O(n)$, they are setting the final complexity of a simulation.

We introduce linear iterative methods and discuss their properties in particular w.r.t. convergence and complexity issues. We then develop multi-grid methods and discuss their main properties. Issues of convergence and complexity are discussed in detail. We further analyse robustness for singularly perturbed problems and generalise multi-grid methods to solving systems of PDE. We introduce multi-grid methods for non-linear and heterogeneous problems and introduce Algebraic Multigrid Methods (AMG).

AMCS 344 - Advanced Probability (3)

This is a first graduate course on measure theoretic probability with applications. Topics include: probability spaces, random variables, expectations in terms of the theory of measure and integration, modes of convergence, limit theorems for independent random variables, Radon-Nikodym theorem, conditional expectations, Martingales. Applications to Markov chains.

Prerequisite: AMCS 235, AMCS 241, STAT 220.

AMCS 346 - Advanced Numerical Methods for Partial Differential Equations (3)

Advanced numerical methods for the approximation of partial differential equations will be discussed in this course. The choice of the topics can vary according to the interests of the students, including mixed finite element methods, numerical approximation of eigenvalue problems arising from partial differential equation, approximation of evolution problem of parabolic or hyperbolic type. The course will include examples of applications from science and engineering.

AMCS 348 - Summation by Parts Operators for PDEs (3)

The past decade has seen an explosion in popularity of developing methods of any order with the **summation-by-parts (SBP)** property. This is because the SBP framework offers a simple, yet powerful methodology for the design and analysis of modern algorithms for the solution of partial differential equations (PDEs). The summation-by-

parts (SBP) concept was originally developed in the finite difference community with the goal of mimicking finite element **energy analysis techniques**. In recent years, this simple idea has been exponentially generalized enabling a unifying framework for the stability analysis of many spatial discretizations including finite difference, finite volume, flux reconstruction, and **continuous/discontinuous Galerkin (FEM)** methods on structured and unstructured polytope meshes for linear and nonlinear conservation laws on conforming and non-conforming grids. The most important consequence of SBP is that it naturally guides the path to stability and robustness as it mimics continuous stability analysis. The SBP concept provides a strong theoretical framework, that is discretization agnostic, for the analysis of existing schemes and the design of flexible high-order numerical approximations that are robust for complex multi-scale applications. The main topics of the course will be: introduction of SBP operators through the stability analysis of model problems equations (**advection and advection-diffusion equations**); construction of collocated Legendre-Gauss-Lobatto SBP operators; Hadamard formalism and extension of SBP operators to nonlinear PDEs; one element discretizations analysis and weak imposition of boundary conditions through the **simultaneous-approximation terms** technique; multi-element discretizations and analysis and imposition of weak interface coupling; discontinuous collocated Galerkin method and entropy stability for the **Burgers'**, compressible **Euler** and **Navier-Stokes** equations.

Prerequisite: AMCS 252.

AMCS 350 - Spectral Methods for Uncertainty Quantification (3)

This course is an advanced introduction to uncertainty propagation and quantification in model-based simulations. Examples are drawn from a variety of engineering and science applications, emphasizing systems governed by ordinary or partial differential equations. The course will emphasize a probabilistic framework and will survey classical and modern approaches, including sampling methods and techniques based on functional approximations.

AMCS 351 - Advanced Stochastic Simulation (3)

This is a first graduate course on advanced simulation. Topics include: Basic simulation methods (inversion, rejection, Box Muller, ratio of uniforms), Monte Carlo Integration, variance reduction methods (importance sampling, antithetic variates, control variates, multilevel Monte Carlo), unbiased simulation, Markov chain Monte

Carlo, Metropolis-Hastings, Gibbs Sampler, Non-Reversible Markov chain methods, Unbiased Markov chain Methods, Particle Filters, Sequential Monte Carlo samplers, Particle Markov chain Monte Carlo, Particle Gibbs samplers, Coupled-Conditional Particle Filters, Advanced multilevel methods, applications to stochastic differential equations and Bayesian inverse problems.

Prerequisite: AMCS 241 or STAT 220 or permission of instructor .

AMCS 353 - Advanced Topics in Wave Propagation (3)

This course starts from the basic linearized theory of wave phenomena: examples are chosen from electromagnetics, acoustics, elastics and other subjects and exposes the recent developments in wave propagation. The topics include : basic concepts in wave propagation; waves in layered media; scattering, transmission and reflection; waves in random media, effective medium properties, resolution analysis; applications in wave functional materials and imaging and numerical techniques in techniques in solving wave equations in heterogeneous media. Basic knowledge on eigenvalue problem, fourier transform, linear algebra, vector analysis is desired.

AMCS 354 - Asymptotic Methods of Applied Mathematics (3)

Prerequisite: Basic courses in complex analysis, ODE, and PDE. Asymptotic approximations, regular and singular asymptotics, approximation of integrals (methods of stationary phase and steepest descents), asymptotic analysis of ODE at regular/irregular singular points, parameter asymptotics for initial/boundary value problems, matched asymptotic expansions, the method of multiple scales, WKB method, weakly nonlinear oscillations and waves, bifurcation and stability.

AMCS 355 - Advanced Topics in Numerical Integration (3)

Numerical methods for solving initial value ODEs, especially large problems arising from semi-discretization of PDEs. Review of Runge-Kutta and multistep methods: consistency, stability, convergence, accuracy. Error estimation and step size control. Stiffness, order reduction, stage order and stiff accuracy. Logarithmic norms and one-sided Lipschitz constants. Symplectic and energy-conserving methods. Monotonicity-, contractility- and positivity-preserving methods. Methods for Multiphysics problems: stabilized methods, exponential, and additive methods. Parallel time integration methods: Parallel, deferred corrections and PFASST, extrapolation.

Prerequisite: AMCS 252.

AMCS 370 - Inverse Problems (3)

Prerequisites: Linear algebra, multi-variable calculus. The aim of the course is to introduce the basic notions and difficulties encountered with ill-posed inverse problems, to present methods for analyzing these problems and to give some tools that enable to solve such problems. The course will show what a regularization method is and introduce different kinds of regularization techniques and the basic properties of these methods for linear ill-posed problems. Non-linear inverse problems are also studied through some examples: inverse spectral problem, inverse problem of electrical impedance tomography and the inverse scattering problem. The course will introduce numerical tools for analyzing inverse problems, with a focus on the adjoint state method. The Bayesian estimation is also considered. Examples of inverse problems are provided especially in medical imaging.

AMCS 393 - Doctoral Traveling Scholar

Doctoral level traveling scholar.

AMCS 394 - Contemporary Topics in Applied Mathematics and Computational Science (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

AMCS 395 - Doctoral Internship (0-12)

Doctoral level internship.

AMCS 396 - Mathematical Modelling in Computer Vision (3)

Prerequisites: multivariable calculus and basic probability theory. A research course that covers topics of interest in computer vision, including image denoising/deblurring, image segmentation/ object detection and image registration / matching. The emphasis will be on creating mathematical models via the framework of Bayesian estimation theory, analyzing these models and constructing computational algorithms to realize these models. Techniques from calculus of variations, differential geometry and partial differential equations will be built up as the need arises.

AMCS 397 - Doctoral Dissertation Research (0-12)

Doctoral level research leading to a formal written dissertation and oral defense.

AMCS 398 - Graduate Seminar (0)

Graduate seminar focusing on special topics within the field.

Crosslisted as: AMCS 398 and STAT 398.

AMCS 399 - Doctoral Directed Research (0-12)

Doctoral level supervised research.

AP - Applied Physics**AP 199 - Directed Study in Applied Physics (0)**

A course of self-study in a particular topic as directed by faculty and approved by the division.

AP 210 - Spectroscopy of Solids (3)

This course provides an introduction to the spectroscopy of solids. The first part covers fundamentals including, electromagnetic radiation, light sources, spectral analysis of light, and light detection. The second part will discuss light-matter interaction, covering dielectric responses of matter, transitions in the visible and near-visible spectral range, and selection rules. Finally, different spectroscopy techniques are reviewed and their application to different material classes including organic, hybrid, and inorganic materials are discussed.

AP 220 - Statistical Physics (3)

Prerequisite: MSE 200 and MSE 227 are beneficial but not mandatory. This course provides an introduction to statistical thermodynamics (physics) and then discusses more advanced problems by covering the following topics: macroscopic vs. microscopic systems, statistical weight, calculus of probabilities, Boltzmann distribution function, Lagrange multipliers, mean energy and internal energy of particles. Statistical ensembles: microcanonical and canonical ensembles, canonical and molecular partition functions, heat capacity, auxiliary functions. Further ensembles: Grand-canonical and others, fluctuations. Partition functions: translational, rotational, and vibrational partition functions, electronic and nuclear contributions, properties of the ideal gas, and equipartition principle. Monoatomic crystals: Einstein and Debye model of heat capacity. Classical statistics and quantum statistics: density of states, quantum statistics, bosons, fermions, and their microstates, distribution functions: Maxwell's velocity distribution, Fermi-Dirac statistics (electron gas), Bose-Einstein statistics (photon gas). Equilibria and dynamics: equilibrium constants and collision theory.

AP 228 - Advanced Quantum Mechanics (3)

This class builds on basic concepts introduced in the Applied Quantum Mechanics course (MSE227) and expands towards more advanced topics. It covers angular momentum, spin angular momentum, including Clebsch-Gordan coefficients and Kramers theorem. Approximation methods are also addressed, such as perturbation theory, variational method, and time-dependent perturbation within the interaction picture, as well as adiabatic theorem and Berry's phase and quantum theory of scattering. Finally, relativistic quantum mechanics and Dirac equation will be introduced.

AP 230 - Condensed Matter Physics (3)

This course aims at establishing solid foundations in condensed matter physics. Prior to take this class, students should be familiar with basic electronic properties of materials (such as MSE225) and standard applied mechanics (such as MSE227). Starting with the band theory of solids and tight-binding model, it covers the semiclassical theory of metals, and addresses the concepts and Bloch states, Fermi surface and quantum oscillations, as well as scattering rates, beyond the relaxation time approximation. Then, electron liquid theory is addressed and basics concepts related to electron-electron interactions are covered, including the Stoner criterion, the Hartree-Fock approximation, Fermi and Luttinger liquids, and charge/spin density waves. Finally, superconductors are considered, including London, Ginzburg-Landau and BCS theories.

AP 293 - Master's Traveling Scholar

Master's level traveling scholar.

AP 294 - Contemporary Topics in Applied Physics (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

AP 295 - Master's Internship (0-12)

Master's level internship.

AP 297 - Master's Thesis Research (0-12)

Master's level research leading to a formal written thesis and oral defense.

AP 299 - Master's Directed Research (0-12)

Master's level supervised research.

AP 320 - Introduction to Nanoelectronics (3)

This class explores quantum transport in mesoscopic devices. It addresses quantum transport in clean systems, including quantum conductance interference effects in nanodevices such as Aharonov-Bohm effects, and quantum oscillations. Properties of two-dimensional electron gases and nanowire will be discussed. The effect of disorder is discussed from Knudsen regime, including size effects, to drift-diffusion model and quantum corrections to conductance including weak and strong localization, universal conductance fluctuation. Finally, single electron transistor, Coulomb and Pauli spin blockade regimes will be presented.

AP 330 - Many-Body Theory in Condensed Matter (3)

This course introduces techniques and concepts in many-body quantum physics in condensed matter. Fundamental theoretical tools such as second quantization, Green's function formalism, as well as Feynmann diagrams will be introduced and applied to selected topics such as weak localization, interacting electron systems, superconductivity.

Prerequisite: AP 228.

AP 393 - Doctoral Traveling Scholar

Doctoral level traveling scholar.

AP 394 - Contemporary Topics in Applied Physics (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

AP 395 - Doctoral Internship (0-12)

Doctoral level internship.

AP 397 - Doctoral Dissertation Research (0-12)

Doctoral level research leading to a formal written dissertation and oral defense.

AP 398 - Graduate Seminar (0)

Graduate seminar focusing on special topics within the field.

Crosslisted as: AP 398 and MSE 398.

AP 399 - Doctoral Directed Research (0-12)

Doctoral level supervised research.

B - Bioscience**B 100 - Basic Chemistry for Life Sciences (0)**

This course will cover the essential foundations of general chemistry and organic chemistry relevant for all life science studies.

B 101 - Introductory Biochemistry (0)

This class targets at students with entry-level background in Biochemistry. It serves as refreshment as well as a boost course for those aiming to major in all disciplines in biology. The class starts with covering the chemistry principles that governs protein folding, mechanisms, kinetics and regulation. It then expands on these principles to introduce the structures and metabolisms of carbohydrates and lipids. The second half of the course focuses on introducing the foundation behind membrane functions, energy conversion pathways and the key metabolic pathways.

B 102 - Introductory Cell Biology (0)

This class targets students with entry-level background in cell biology. It serves as refreshment as well as a boost course for those aiming to major in all disciplines in biology. The class starts with defining the main terminology and fundamental principles of cell biology, it then recapitulates the different building blocks of cells from molecular to organelle level. Using a combination of upfront classroom teaching and problem-based learning, the principles of signaling, metabolism and energy homeostasis are discussed in the context of cellular organization.

B 103 - Introductory Microbiology (0)

This course aims at an audience with basic experience in microbiology. It will serve students intending to major in all disciplines in biology as opportunity to refresh existing knowledge as well as to broaden their horizon. The class starts with an overview over microbial cell structure and functions, metabolism and growth control as well as basic microbial genomics and genetics and their relevance for biotechnology. Microbial systematics and metabolic diversity will be introduced and illustrated by selected examples from different microbial taxa. Finally, the pivotal role of microorganisms in large scale ecological processes will be discussed and their interaction with other organisms, including humans, will be covered. Upfront-style teaching to classes will be combined with problem-based interactive approaches. Exemplary problems will be discussed to introduce students to essential topics that will be prerequisites for Fundamental of Microbiology B 211,

Advanced Environmental Microbiology B 313 and Genomics B 204. It will also provide complementary foundation to the advanced Cell Biology courses B 213 and B 224 and Synthetic Biology and Biotechnology B 206. In addition, a central aim of the class is to help students realize how deductive processes are harnessed in biological research to gain new insight.

B 104 - Introductory Molecular Biology (0)

This course aims at an audience with basic competences in molecular biology and genetics. It will serve as a reminder as well as extension course for those intending to major in all disciplines in biology. The class starts with an overview over the features of DNA as the carrier of genetic information in cells and the mechanisms by which it is maintained over cell generations. Further, it addresses the fundamental mechanisms by which the information encoded in DNA is transcribed into RNA and then translated into proteins as functional units. Basic concepts of eukaryote genetics such as chromosome function and Mendelian heredity will be covered as well as aspects of bacterial genetics relevant for experimental molecular biology.

B 199 - Directed Study in Bioscience (0)

A course of self-study in a particular topic as directed by faculty and approved by the division.

B 201 - Biophysics (3)

This course is destined to provide biologists with the principals of biophysics and biophysical methods, in particular concerning theoretical bases and their usage in modern molecular biology (e. g. Structural and Molecular Biology) along with other biophysical techniques that are used for the characterization of macromolecules and their functioning in the state-of-the-art laboratories. Thus the course aims at allowing biology students to understand advanced structural biology and biophysical methods well enough to critically evaluate research in these areas, plan own experiments, and fully profit from available resources (for example the PDB, BMRB and other data bases and professional servers). For students in the field of bioscience, this course should also provide a solid basis for their own experimental research. The main focus of the course is to expose students to study about fundamental and advanced molecular biophysics topics and allow them to present the topics in a form of seminar. Each student will prepare and present from two to three seminars per semester for the topics predefined with the Instructors week before. The seminars will be evaluated after each presentation. This will give students a great chance to practice the soft skills and presentation of fundamental as

well advanced topics.

B 204 - Genomics (3)

Principles and technologies for generating genomic information for ecological, biomedical and biotechnological applications. Technologies will be introduced progressively, from DNA to RNA to protein to whole cell systems. The integration of biology, chemistry, engineering and computational sciences will be stressed. Topics include: Technology for the High-throughput Sequencing, Methods for annotating genomes, characterizing functional genes, Gene Expression, Comparative Genomics, Population Genomics, Proteomic Technologies and Systems Biology.

B 206 - Synthetic Biology and Biotechnology (3)

Introduction to genetic circuits in natural systems; engineering principles in biology; BioBricks and standardization of biological components; numerical methods for systems analysis and design; fabrication of genetic systems in theory and practice; transformation and characterization; examples of engineered systems.

B 209 - Molecular Genetics (3)

The course will begin by introducing classical genetics and transition to a comprehensive coverage of molecular genetics, with an emphasis on molecular tools used to engineer genetic change. The first part of the course will cover the basic principles of classical genetics such as heredity, mutations, pedigree analysis, genetic testing, and genetic mapping. These topics include an understanding of how genetics was used to discover the rules for genetic inheritance, chromosome organization, replication (DNA), transcription (RNA), and translation (proteins). These concepts will be used to describe gene regulation and mRNA processing in eukaryotes. The second part will discuss how technologies such as sequencing and proteomics have revolutionized the field of genetics, with a special focus on crop breeding and synthetic genetics in model organisms. We will discuss how these tools allow engineering plants, cells, and organisms for agricultural and health-related purposes.

B 211 - Fundamentals of Molecular Microbiology (3)

This course is designed to provide introductory concepts on fundamentals of microbiology. This course covers basic knowledge on molecular biology of microorganisms, microbial bio-diversity, and microbial diseases. In the end, a series of practical sessions will also be included to provide students with some basic skills in molecular microbiology.

B 213 - The Cell: Structure, Development and Physiology II (3)

The scope of this course is to provide a comprehensive overview of eukaryotic cell structure and the fundamental functional aspects of membranes, organelles, nuclear architecture, genome and epigenome in the context of development, specialization, and integration with the environment.

Prerequisite: B 244.

B 214 - Biomolecule Structure and Function (3)

This course will start with an overview of the structural features of proteins and some other biological macromolecules, and discuss how these features have evolved to support specific functions. The course will then proceed to introduce the major methods used to determine 3D structures of proteins and other biomolecules, in particular X-ray crystallography, Nuclear Magnetic Resonance, cryo-Electron Microscopy, Small Angle X-ray Scattering and computational methods (Bioinformatics, 3D Homology Modelling). We will discuss the strengths and weaknesses of each method and to instruct students on how these methods are best used and combined.

B 224 - The Cell: Structure, Development and Physiology I (3)

The scope of this course is to provide a comprehensive overview of eukaryotic cell structure and the fundamental functional aspects of membranes, organelles, nuclear architecture, genome and epigenome in the context of development, specialization, and integration with the environment.

B 241 - Molecular and Cellular Biology Lab (3)

This course covers principles and practice of basic molecular and cellular biology techniques; Introduction to skills in a Molecular and Cellular Biology lab; Plasmids: transformation, isolation and restriction digestion; protein production, purification and functional assay; Small-interfering RNAs (siRNA) and gene expression; Isolation of RNA and Analysis of gene expression by Polymerase Chain Reaction (PCR) and RT-qPCR; Immunofluorescence: following cellular movement of a shuttling RNA-binding protein before and after stress.

B 293 - Master's Traveling Scholar

Master's level traveling scholar.

B 294 - Contemporary Topics in Bioscience

A course of current interest. Topics are not permanent and

the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

B 295 - Master's Internship (0-12)

Master's level internship.

B 296 - Lab Rotation (3)

Master's students are expected to go through a lab rotation their first fall semester. The objective of this course is to help students in identifying their future research advisor by exposing them to different research areas.

Master's students are expected to complete 3 rotations their first semester (5 weeks per rotation). The nature of the rotation may vary from one (1) lab to another depending on the advisor; thus some rotations can be research focused and others can involve more literature and background work.

B 297 - Master's Thesis Research (0-12)

Master's level research leading to a formal written thesis and oral defense.

B 299 - Master's Directed Research (0-12)

Master's level supervised research.

B 306 - Synthetic Biology and Biotechnology (3)

Introduction to genetic circuits in natural systems; engineering principles in biology; BioBricks and standardization of biological components; numerical methods for systems analysis and design; fabrication of genetic systems in theory and practice; transformation and characterization; examples of engineered systems.

B 316 - Foundations in Bioimaging (3)

This course provides a comprehensive overview of bioimaging techniques including fundamental concepts and applications, which allow biology students to design imaging experiments for their own research. The course covers basic optics and spectroscopy, advanced fluorescence microscopy, basics of electron microscopy, and single-molecule imaging techniques. The course also introduces label-free optical imaging methods including Raman and infrared microscopy, Second and Third harmonic microscopy and holographic microscopy. Introduction to advanced methods for manipulation of single cells and single molecules (optical and magnetic tweezers), Atomic Force Microscopy and some references to advanced applications of electron microscopy for imaging bio-samples will be also provided.

B 317 - Advanced Environmental Microbiology (3)

The course introduces the principles and applications of microbial biotechnology for the environment under the concepts of Microbial Resource Management. The course illustrates the biology, ecology, production and application of microorganisms for sustainable agriculture and environmental bioremediation and cleanup. The course is divided in four sections: 1) “Microbial diversity and soil fertility” illustrates prokaryote phylogeny and the microbial role in the soil/plant ecosystem. 2) “Microbial antagonism and biocontrol” deals with the biology, ecology and biotechnology of symbiotic and antagonistic microorganisms against phytopathogens and insects. 3) “Microbial technologies for environmental decontamination and bioremediation” introduces the metabolic pathways for pollutants’ degradation and the technologies for their exploitation in aquatic and terrestrial ecosystems. 4) “The industrial production of microorganisms for environmental applications” illustrates the principles of industrial microbiology including strain selection, microbial growth, and the fermentative process.

B 318 - Tissue Engineering and Regenerative Medicine (3)

The course covers major topics in tissue engineering and regenerative medicine. The fast moving fields of tissue engineering and regenerative medicine are considered to have transformative implications for future biomedical applications and the future health care. This course should give an overview on the current state in tissue engineering and regenerative medicine, for example stem cell bioengineering and cell therapy, at the level of basic principles and of specific applications, with additional focus on clinical trials.

B 320 - Stem Cells and Molecular Medicine (3)

This course will provide a comprehensive overview of pluripotent stem cell biology, advanced techniques of cellular reprogramming, trans differentiation and genome editing and how these technologies can be applied to disease modeling studies.

Prerequisite: B 224 (Please note: prerequisites are for M.Sc. students only.).

B 321 - Epigenetics and Chromatin (3)

The major aim of the three-week summer block course is to train participants (min. 6, max. 12) in experimental Cell Biology on the example of Chromatin Biochemistry, Epigenome Structure and Nuclear Organization. To improve students' skills in designing, executing and

analyzing experiments, the course combines two principles: theory and practice. Besides covering the fundamental background and theory of Epigenetics and Genome Regulation, participants will learn basal and cutting-edge experimental technologies that are currently used to answer key questions at the frontiers of Epigenetics research. The course is shaped according to international EMBL (European Molecular Biology Laboratories) and MPI (Max Planck Institutes) advanced method courses for M.Sc. and Ph.D. students. Profs. Orlando and Fischle (including their laboratories' staff) will introduce Applied Epigenetics on the basis of dissection of classical and recent experiments. Student participants will carry out several hands-on experiments with step-by-step instructions.

Prerequisite: B 241, B 224, 213 (Please note: prerequisites are for M.Sc. students only).

B 322 - Computational Bioscience and Machine Learning (3)

The Course provides a broad and practical overview of selected techniques and concepts in rapidly developing areas such as bioinformatics, computational biology, systems biology, systems medicine, network biology, synthetic biology, data analytics, predictive modelling, machine learning, and machine intelligence. Topics are selected to be of relevance for the computer scientist, working biologist, computational scientist, and applied investigator (Biotechnology and engineering).

B 323 - Advanced Bioimaging (3)

This course provides a board and in depth overview of cutting edge imaging techniques used in life science researches: advanced application of both Transmission and Scanning Electron Microscopy (TEM and SEM) to biological materials investigations; fluorescence imaging and related techniques, including selective-plane illumination microscopy, super-resolution fluorescence imaging, tissue clearing techniques, and advanced fluorescent protein technologies; Coherent Raman microscopy; Near-field optical microscopy and recent advances in endoscopy; digital holographic microscopy. Through hands-on learning, the students will also learn: basics of correlative light and electron microscopy (CLEM), cryo-methods for bio-samples preparation, EM-based methods for the 3d reconstruction of cells and tissues, basic and advanced fluorescence microscopy techniques including confocal microscopy and stimulated emissions depletion (STED) microscopy for cellular imaging.

Prerequisite: B 316.

B 324 - Machine Learning for Genomics and Health (3)

Recent progress in machine learning and artificial intelligence is currently transforming genomics, translational medical research, healthcare, and wellness. Huge data-sets are produced at an increasing rate. This include recordings of smart living augmented by sensor devices, medical images, text data in healthcare and social media, and genomics profiling of a range of different biomolecular data. Concurrent with these developments there has over the last 5 years been a stunning production of open source machine learning tools and powerful computational platforms. These advances are currently advancing bioinformatics, computational biology, systems biology, where an area which could be referred to as Digital Medicine in a broad sense is emerging. We expect students with a background in computer science, mathematics, bioscience, and engineering to learn how to use, develop, and to think on how to use ML/AI techniques in what can broadly be referred to as Digital Technologies for Medicine and Health.

B 325 - Advanced Biomacromolecular NMR Spectroscopy (3)

This course aims at deepening the understanding of the synergism among the contemporary structural biology high-resolution techniques, i.e. high-resolution multidimensional nuclear magnetic resonance (NMR) spectroscopy and single crystal X-ray crystallography and cryogenic electron microscopy (cryoEM). The course introduces students to the modern concepts of biomacromolecular dynamic structures, molecular mobility, thus their functioning and dynamic integrated structural biology. The contemporary high-resolution biophysical techniques used to study the biomacromolecular matter in the different forms, solutions, precipitates, aggregates, phase-separated entities, hydrogels, etc. will be widely discussed and analyzed in terms of current cutting-edge spectroscopic techniques and prominent examples from the literature and ongoing own studies at the university.

B 326 - Geometric Machine Learning and Network Biology

This course aims to give a systematic and timely overview of the most critical developments and tools in network science and machine learning on graphs and their applications in various research areas with particular reference to LifeSciences. Network science and network biology are essential application areas where statistical and heuristic methods are important. Topics include biological and molecular networks, how to construct these from data,

and how to analyze these such networks. Recent developments in geometric machine learning generalize convolutional operators to non-Euclidian geometries. Topics include graph neural networks, generative modeling techniques for non-euclidean geometries, operators on manifolds, message passing in graphs, symmetries and group theory, embedding techniques, and representation learning.

Prerequisite: CS 220 and CS 229, linear algebra, and working knowledge of using python.

B 345 - Advanced Topics: Bioscience (3)

The course reviews current topics in bioscience, particularly relying on scientific journal publications to provide case studies, illustrative examples, classic studies and controversial findings pertinent to specific fields within biosciences. The course will feature an emphasis on primary literature searches, reading and assessment of primary literature. It is expected that the student reads no less than 5 scientific papers per week in the prescribed topic area and is capable of presenting and critically discussing the content of these publications. In this level 300 course, the student assessment is based on active participation in the lectures and tutorials.

B 393 - Doctoral Traveling Scholar

Doctoral level traveling scholar.

B 394 - Contemporary Topics in Bioscience (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

B 395 - Doctoral Internship (0-12)

Doctoral level internship.

B 397 - Doctoral Dissertation Research (0-12)

Doctoral level research leading to a formal written dissertation and oral defense.

B 398 - Graduate Seminar (0)

Graduate seminar focusing on special topics within the field.

B 399 - Doctoral Directed Research (0-12)

Doctoral level supervised research.

BESE-Biological and Environmental

Science and Engineering

BESE 300 - Fundamental Skills in Bioinformatics (3)

The course provides a broad and mainly practical overview of very fundamental skills for the area of bioinformatics. Topics are selected to be relevant for the biologist / biomedical scientist with limited or none background in programming or quantitative analysis. The aim is to support the simultaneous development of quantitative and programming skills for biological and biomedical students. Through the course, the student will develop the necessary practical skills to conduct fundamental data analysis and develop the framework to establish advanced programming and analytical skills in the next courses. A particular aim is to provide the participants with long-term skill on programming and the guidelines for improving their knowledge on it.

BioE - Bioengineering

BioE 199 - Directed Study in Bioengineering (0)

A course of self-study in a particular topic as directed by faculty and approved by the division.

BioE 201 - Foundations of Bioengineering (3)

This course contains elements of programming, statistics, electronics, materials and synthetic biology. It describes the fundamental principles and methods of different engineering fields to provide the necessary background for future specialization in the tracks of this program. The course aims to apply engineering principles to understand the physical, chemical, and mathematical basis of biological systems. The students will learn the origin of electrical biosignals, fundamental operation principles of modern electronics (sensing and control instrumentation) used at the interface with biological systems including EEG, ECG, biochemical sensors. They will learn about the basics of fabrication of devices involving microfluidics and microarray device design principles. The students will be then introduced to the different types of reactor configurations commonly used as bioreactors, operational parameters related to these reactors, and optimization of the reactors to maximize cell yield. The course will then introduce the principles of material science interfacing with biology, in order to design artificial implants and matrices for biomedical applications. This will broaden the knowledge of the chemical, physical and biological properties of the materials, focusing on the materials recently used in the biomedical field. In particular, students will develop critical analysis of biomaterial development and methods of characterization. Furthermore, it will also

introduce cutting-edge techniques associated with 3D bioprinting. Finally, the students will be introduced to data-analytics and modeling with particular focus on R and MATLAB through hands-on exercises. Using R students will learn to plot data-distributions, calculate summary statistics, perform dimension reduction analysis (PCA, and other related techniques) and to run elementary bioinformatics scripts. In the modeling part students will work with simple mathematical models for synthetic biology (biological switch and oscillator) and basic predictive models (KNN, decision trees and SVM) using MATLAB.

BioE 202 - Foundations of Synthetic Biology (3)

The course focuses on introducing bioengineers to the types of concepts, cellular hosts, devices, and engineering principles they need to apply to solve real-world problems. Key concepts are covered including the cell as a basic unit of life, central dogma, gene regulation, genetic modification, growth, development and evolution. The course covers the basic principles of cell structure and function of different prokaryotic and eukaryotic species used as hosts for bioengineering applications (bacteria, yeast, algae, plant, human). Students will learn the chemical structure of DNA, RNA, and protein, enzymatic catalysis, metabolism, and manipulations. How this structure information is used to evolve new functions in these molecules will be discussed. The course then highlights the use of these key concepts, devices, molecules, and engineering principles to solve real world problems by providing examples and grand challenges.

BioE 230 - Foundations of Bioengineering Lab (3)

In this course, students will gain hands on experience in fundamental operation principles of modern electronics used at the interface with biological systems. They will learn about the basics of fabrication of devices involving microfluidics and microarray device design principles. Students will then gain hands on experience in operating a bioreactor using the knowledge acquired from the lectures. Students will vary the different operational parameters and observe changes to the biomass, resource recovery etc. Next, we will provide students the principles of material science interfacing with biology, in order to design artificial implants and matrices for biomedical applications. The course aims to broaden the knowledge of the chemical, physical and biological properties of the materials, focusing on the materials recently used in the biomedical field. In particular, students will develop critical analysis of biomaterial development and methods of characterization. Furthermore, it will also introduce cutting-edge techniques associated with 3D bioprinting.

Finally, students are introduced to data-analytics and modeling. Students will learn to use R and MATLAB through hands-on exercises. Using R students will learn to plot data-distributions, calculate summary statistics, perform dimension reduction analysis (PCA, and other related techniques) and to run elementary bioinformatics scripts. In the modeling part students will work with simple mathematical models for synthetic biology (biological switch and oscillator) and basic predictive models (KNN, decision trees and SVM) using MATLAB.

BioE 293 - Master's Traveling Scholar

Master's level traveling scholar.

BioE 294 - Contemporary Topics in Bioengineering (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

BioE 295 - Master's Internship (0-12)

Master's level internship.

BioE 297 - Master's Thesis Research (0-12)

Master's level research leading to a formal written thesis and oral defense.

BioE 299 - Master's Directed Research (0-12)

Master's level supervised research.

BioE 319 - Biomaterials and Biomedical Devices (3)

This course is about the biomedical implants, the materials used in biomedical devices and the operation and fabrication of electrical devices such as sensors or stimulators that are designed to communicate with human body. It will provide an overview of the research highlights in the field of biomedical engineering and design principles of the materials/devices currently employed in the clinic.

BioE 393 - Doctoral Traveling Scholar

Doctoral level traveling scholar.

BioE 394 - Contemporary Topics in Bioengineering (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

BioE 395 - Doctoral Internship (0-12)

Doctoral level internship.

BioE 397 - Doctoral Dissertation Research (0-12)

Doctoral level research leading to a formal written dissertation and oral defense.

BioE 398 - Graduate Seminar (0)

Graduate seminar focusing on special topics within the field.

BioE 399 - Doctoral Directed Research (0-12)

Doctoral level supervised research.

CE - Chemical Engineering

CE 199 - Directed Study in Chemical Engineering (0)

A course of self-study in a particular topic as directed by faculty and approved by the division.

CE 201 - Chemical Thermodynamics (3)

Prerequisites: Undergraduate thermodynamics course. The primary goal of chemical thermodynamics is the physical explanation of the fundamental principles governing the variety of chemical phenomena taking place in the world around us. The goal of this course is to give students a conceptual understanding of the main principles of thermodynamics. Topics include: the concept of entropy; the Clausius, Gibbs, Boltzmann and Shannon definition of entropy; entropy and information; Maxwells demon; the Boltzmann distribution law; the Maxwell-Boltzmann speed distribution; Gibbs and Helmholtz free energy; the chemical potential; Gibbs-Duhem and Euler equation; the Gibbs phase rule; entropy of mixing and Gibbs paradox; phase diagrams, the Flory-Huggins phase diagram; spontaneous and non-spontaneous processes; thermodynamics of chemical reactions; thermodynamics of osmosis and reverse osmosis, entropy and irreversible phase transitions; introduction in thermodynamics of irreversible processes; introduction in statistical thermodynamics.

CE 202 - Advanced Transport Phenomena (3)

Prerequisites: Basic knowledge of fluid mechanics, heat & mass transfer, vector analysis, and differential equations. The aim of this course is to enable students to i) derive appropriate differential balances for specific material properties, including momentum, thermal energy, and mass species, accounting appropriately for property flux by convective and diffusive (molecular-scale) processes,

along with property generation or loss in the material continua; ii) write the Thermal Energy Equation, the Species Continuity Equation, and the Navier-Stokes Equations and pose (simplify) them appropriately for specific transport problems; iii) know appropriate boundary conditions that can be applied to specific transport problems; iv) conduct scale or dimensional analyses of transport problems, using the analyses to help simplify or enhance understanding of underlying transport processes; v) solve and physically interpret one (1)-dimensional steady state conduction and species diffusion problems in rectangular, cylindrical, and spherical geometries, with and without zero-order and first-order generation/ loss; vi) use separation of variables technique to solve and physically interpret two (2)-dimensional steady-state conduction and species diffusion problems; vii) use similarity methods to solve and physically interpret unsteady state conduction and diffusion problems in unbounded material regions; viii) use the finite Fourier transform method to solve and interpret unsteady state conduction and diffusion problems in bounded material regions; ix) solve and physically interpret unidirectional steady and unsteady viscous flows in unbounded regions and in bounded regions (i.e. flow conduits or ducts); and x) solve and physically interpret simultaneous convection and diffusion (conduction) problems involving the interaction of thermal or concentration boundary layers with developing or developed velocity profiles.

CE 203 - Advanced Reaction Engineering (3)

The objective of this course is to impart and to continue the rigorous study of reaction engineering. In this course, particular emphasis will be given to chemical kinetics and transport phenomena, review of elements of reaction kinetics, rate processes in heterogeneous reacting systems, design of fluid-fluid and fluid-solid reactors, scale-up and stability of chemical reactors and residence time analysis of heterogeneous chemical reactors.

CE 210 - Materials Chemistry I (3)

A presentation of present fundamental concepts in materials chemistry. The main topics to be covered include structure and characterization, macroscopic properties and synthesis and processing

CE 225 - Materials Chemistry II (3)

An introduction to electron microscopy based techniques: Scanning electron microscopy (SEM), Transmission electron microscopy (TEM), Electron diffraction (ED), Scanning transmission electron microscopy (STEM), Energy-filtered TEM (EFTEM), Energy dispersive X-ray analysis (EDX), and Electron energy loss spectroscopy

(EELS). On-site demonstration of the electron microscope will be given. Nano porous materials including zeolites and mesoporous materials will be another topic of this course.

CE 226 - Process Modeling and Control (3)

This course aims at building knowledge in process systems modeling/control. This unit will also enable you to develop a systematic approach to process modeling, control design and controller development and analysis. The course aims at: developing an appreciation for the importance of process models and process control in a chemical plant/process, to see the significance of these in real life and to relate the theory learnt to practice; developing an appreciation for the importance of process models in the development of control theory and practice.

CE 230 - Physical Chemistry of Macromolecules

Conformation and configuration; Solution Thermodynamics; Phase separation (theory and experimental aspects), polymer fractionation; Mechanisms and kinetics of phase separation; Miscibility of polymer blends and compatibilization; Micro phase separation and self-assembly; Rheology of polymer solutions; Viscosity of diluted and concentrated solutions, polymer gels; Rheology of polymer melts and composites, relevance for polymer processing; Amorphous state, glass-rubber transition, plasticizers; Elasticity and Viscoelasticity; Thermal analysis, dynamic mechanical analysis; Crystalline state, liquid-crystalline state; Mechanical properties.

CE 293 - Master's Traveling Scholar

Master's level traveling scholar.

CE 294 - Contemporary Topics in CE (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

CE 295 - Master's Internship (0-12)

Master's level internship.

CE 297 - Master's Thesis Research (0-12)

Master's level research leading to a formal written thesis and oral defense.

CE 299 - Master's Directed Research (0-12)

Master's level supervised research.

CE 305 - Life Cycle Sustainability Assessment (3)

Engineers face growing pressure to incorporate sustainability objectives into their practice. In comparing two (2) products/ designs it is often not apparent which one (1) is more sustainable. The course introduces concepts and method for determining the net environmental, economic, and social impacts of an engineering technology or process. Specific topics include life cycle assessment, cost/benefits analysis, energy auditing, materials accounting, and environmental assessment. These methods are examined and applied to current engineering issues such as global climate change, alternative-fueled vehicles, water and wastewater treatment, urban development, renewable energy (solar, wind, and biomass), and waste mitigation. Each student will be required to apply tools learned to assess the sustainability of a specific engineering system. This is a research-based course and is suitable for students interested in researching in-depth a particular topic. By the end of the course, students will have an awareness of analytical tools/resources for evaluating sustainability employing a systems perspective.

CE 317 - Clean Fossil Fuels and Biofuels (3)

The different types of biofuels will be presented and discussed in this course. Topics include biomass feedstocks, first, second and third generation of biofuels, fuel from cellulose, catalytic conversion of biomass to liquid, energy balance of biofuels, biological production of hydrogen, biodiesel, microbial fuel cells. The Clean Fossil Fuel part of this course deals with gasification processes including ICG power plants, Fischer Tropsch synthesis, clean coal technologies, desulfurization and carbon dioxide capture and storage.

CE 318 - Advanced Separation Technologies (3)

Pre-requisites: Knowledge of unit operations, mass transfer, chemical thermodynamics, chemical reaction engineering, and numerical methods. The aim of the course is to introduce advanced separation processes (novel technologies going beyond classical approaches based on thermodynamic equilibria), to discuss the selection of processes and to demonstrate new trends in separation technology.

CE 319 - Chemical Process Technology (3)

The chemical industry focuses on the conversion of raw materials into products for other industries and consumers. For chemical engineers and chemist, understanding the various processes involved in the chemical industry is an essential part of their training. This course aims to bring that understanding by giving a detailed description of the

most important conversion processes. From the wealth of chemical processes, a selection had to be made. Knowledge of key processes is essential for the understanding of the culture of the chemical engineering discipline. The first chapters deal with processes related to the conversion of fossil fuels. Examples are the major processes in an oil refinery, the production of light alkenes, and the production of base chemicals from synthesis gas. Analogously to the oil refinery, the (future) CO₂ and bio-based refineries are discussed. Biomass conversion processes nicely show the benefit of having insight into the chemistry, being so different from that for processes based on the conversion of the conventional feedstocks. On the other hand, the use of CO₂ as raw material using clean energy will highlight the potential of the circular carbon economy.

CE 330 - Physical Chemistry of Macromolecules (3)

Conformation and configuration; Solution Thermodynamics; Phase separation (theory and experimental aspects), polymer fractionation; Mechanisms and kinetics of phase separation; Miscibility of polymer blends and compatibilization; Micro phase separation and self-assembly; Rheology of polymer solutions; Viscosity of diluted and concentrated solutions, polymer gels; Rheology of polymer melts and composites, relevance for polymer processing; Amorphous state, glass-rubber transition, plasticizers; Elasticity and Viscoelasticity; Thermal analysis, dynamic mechanical analysis; Crystalline state, liquid-crystalline state; Mechanical properties.

CE 335 - Heterogeneous Catalysis (3)

Catalysis in itself is a multi-disciplinary subject. It is considered to be part of physical chemistry, organometallic chemistry, surface science, or chemical engineering. This course treats catalysis comprehensively for both chemist and chemical engineers. The work focuses on heterogeneous chemocatalysis.

CE 336 - Membrane Science and Membrane Separation Processes (3)

Formulation and solution of engineering problems involving design of membrane systems for gas separation, reverse osmosis, filtration, dialysis, pervaporation and gas absorption/stripping processes. Membrane selection, fabrication and preparation. Membrane transport: gas permeation and reverse osmosis. Polarization and fouling, membrane module design.

CE 393 - Doctoral Traveling Scholar

Doctoral level traveling scholar.

CE 394 - Contemporary Topics in CE (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

CE 395 - Doctoral Internship (0-12)

Doctoral level internship.

CE 397 - Doctoral Dissertation Research (0-12)

Doctoral level research leading to a formal written dissertation and oral defense.

CE 398 - Graduate Seminar (0)

Graduate seminar focuses on special topics within the field.

Crosslisted as: CE 398 and ChemS 398.

CE 399 - Doctoral Directed Research (0-12)

Doctoral level supervised research.

ChemS - Chemical Science**ChemS 101 - Basic Principles of General Chemistry (0)**

A course covering: basic concepts of Atomic numbers, masses, isotopes, stoichiometry, atomic orbitals. Bonding in molecules: Lewis structures, resonance structures, Types of bonding interactions, Bond polarity and dipole moments, Hydrogen bonds, VB theory, hybridization, MO theory, isoelectronic molecules, aromaticity, VSEPR model.

ChemS 102 - Basic Principles of Inorganic & Organic Chemistry (0)

A course covering periodicity and molecular symmetry: Atomic/ ionic radii, Electron affinities and electronegativity, Symmetry operations and elements, Point groups and character tables, Chirality. General groups' properties: Alkali metals: Group I, Earth alkali metals: Group 2, Earth metals: Group 13, d- block chemistry. Coordination and Organometallic Chemistry: Ligand field theory, Jahn-Teller effect, Common types of ligands, Carbonyl complexes, Isolobal principle. Functional groups and their transformations: Alcohols and alkyl halides, Aldehydes and ketones, Carboxylic acids and esters, Amines and amino acids, Lipids. Common Organic Reactions and their mechanism: Condensation reactions, Elimination reactions, Substitution reactions, Radical reactions.

ChemS 103 - Basic Principles of Physical Chemistry (0)

A course covering basic concepts of thermodynamics and kinetics. Ideal gas law and its application; First law of thermodynamics: heat, work, heat capacity, Born-Haber cycle and its application; Second (and third) law of thermodynamics: entropy and its application; Helmholtz and Gibbs energies, spontaneity of reaction, standard Gibbs energy and its application; Chemical potential and phase rule; Fundamental equation of chemical thermodynamics and phase boundary; Raoult's and Henry's law; Phase diagram and distillation; Equilibrium, exothermic and endothermic reactions; Rate law: First order and second order reactions and simple examples (catalysis); Isotherm (Langmuir) and its application; Example of rate equation; Basic spectroscopy techniques relevant to thermodynamics and kinetics.

ChemS 199 - Directed Study in Chemical Science (0)

A course of self-study in a particular topic as directed by faculty and approved by the division.

ChemS 210 - Material Chemistry I (3)

Prerequisite: An understanding of the material covered in basic inorganic and organic chemistry. Presents students with a descriptive overview of Materials Chemistry with particular emphasis on the correlation between materials structure and their properties. This course will cover the following topics: molecular symmetry; basic crystallography; band theory; porous materials; nano-structured materials and some material characterization techniques including powder X-ray diffraction and physical adsorption.

ChemS 212 - Spectroscopy Analysis (3)

An introduction to the theory, application, and interpretation of four (4) major types of spectroscopy: absorption, infrared, and nuclear magnetic resonance spectroscopy, and mass spectrometry. It will focus heavily on interpretation of spectra and application of these tools to address questions of structure and reactivity of organic, organometallic, and inorganic materials. A training session of two (2)-dimensional nuclear magnetic resonance (COSY, NOESY, HSQC, HMBC, etc) will be offered

ChemS 214 - Nano-Catalysis (3)

An introduction to basic concepts of nanochemistry including various synthesis methods (nanofabrication by scanning probe instruments, lithography, sol-gel, hydrothermal, self-assembly, crystal growth etc.), advance synthesis and modifications of nanomaterials (organic functionalization, metallic, bi-metallic, core-shell, shape

and morphology controlled synthesis etc.), tools to characterize nanomaterials (scanning probe microscopy like AFM, STM, MRM and electron microscopy like SEM, TEM). This course will also cover green nanochemistry, nanotech environment and finally applications in various fields with special emphasis on nano-catalysis. This course will empower the students to understand the scientific importance and technological potential of nanotechnology and students will be able to perform three (3) important activities related to Nanochemistry, i.e. synthesis, functionalization and application of nanomaterials.

ChemS 215 - Polymers and Polymerization Processes (3)

The preparation, reactions and properties of high-molecular-weight polymeric materials of both natural and synthetic origin. Physical and organic chemistry of polymers for persons with a basic training in chemistry, physics or engineering. The course is a survey of preparative methods of polymers; step growth polymerization, radical polymerization, ionic polymerization, ring-opening polymerization, polymerization by transition metal catalysts and methods of characterization (nuclear magnetic resonance, Raman, infrared, intrinsic viscosity, differential scanning, calorimetry, gel permeation chromatography) and scattering (light, x-rays).

ChemS 218 - Photo and Electro Catalysis (3)

Fundamentals of Photo and Electro catalysis presented with a novel approach for industrial applications

ChemS 220 - Organometallic Chemistry (3)

The course aims to cover current aspects of research in the field of organometallic chemistry. It is assumed that students taking this course are already familiar with general organometallic chemistry at the undergraduate level. The course materials can be divided into two (2) parts. We will cover topics relating to general organometallic chemistry to function as a refresher but with a practicing researcher's bent and some special topics with focuses on catalysis and its applications.

ChemS 240 - Supramolecular Chemistry (3)

Most of the crucial biological processes, such as antigen-antibody recognition and DNA replication, rely on non-covalent bonding and self-assembly. Taking lessons from Nature, chemists have crafted artificial systems capable of specific molecular recognition. Some of these fascinating molecules, such as crown ethers, cucurbiturils and calixarenes, are pervasive in contemporary chemical literature. This course will examine the topics of non-

covalent bonding, molecular recognition and self-assembly.

ChemS 250 - Material Chemistry II (3)

An introduction to electron microscopy based techniques: Scanning electron microscopy (SEM), Transmission electron microscopy (TEM), Electron diffraction (ED), Scanning transmission electron microscopy (STEM), Energy-filtered TEM (EFTEM), Energy dispersive X-ray analysis (EDX) and Electron energy loss spectroscopy (EELS). On-site demonstration of the electron microscope will be given.

Prerequisite: Prerequisite: ChemS 210 or Approval by course instructor.

ChemS 293 - Master's Traveling Scholar

Master's level traveling scholar.

ChemS 294 - Contemporary Topics in Chemical Science (3)

A course of current basic science interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the program chair.

ChemS 295 - Master's Internship (0-12)

Master's level internship.

ChemS 296 - Lab Rotation (3)

Master's level students are expected to go through a lab rotation their first fall semester. The objective of this course is to help students in identifying their future research advisor by exposing them to different research areas. Master's level students are expected to complete 3 rotations their first semester (3 weeks per rotation). A student upon the approval of the advisor may choose to spend 3 rotations in one (1) lab; this advisor will be the chosen research advisor. Students will choose, at the end of their first semester, the possible advisor(s) that they would like to work with. A faculty committee will then meet and place students according to mutual advisor/ student agreement. The nature of the rotation may vary from one (1) lab to another depending on the advisor; thus some rotations can be research focused and others can involve more literature and background work

ChemS 297 - Master's Thesis Research (0-12)

Master's level research leading to a formal written thesis and oral defense.

ChemS 299 - Master's Directed Research (0-12)

Master's level supervised research with a different PI

ChemS 301 - Crystallography and Diffraction (3)

The objective of this course is to present the basic concepts needed to understand the crystal structure of materials. Fundamental concepts including lattices, symmetries, point groups, and space groups will be discussed and the relationship between crystal symmetries and physical properties will be addressed. The theory of X-ray diffraction by crystalline matter along with the experimental X-ray methods used to determine the crystal structure of materials will be covered. Application of X-ray diffraction to proteins, electron diffraction and neutron diffraction will be briefly discussed.

ChemS 319 - Bioinorganic Chemistry (3)

Interdisciplinary research on the inorganic chemistry of life has developed into a major source of innovation for catalyst development, material chemistry and medicine. The course "Biological Inorganic Chemistry" details the numerous functions of inorganic materials and ions in biology. It provides a general overview of the fundamental tasks performed by inorganic elements in living organisms as well as the related methods and theories with particular emphasis on enzymatic conversions, inorganic biomaterials and medical applications. Nature's strategies are elucidated based on model systems and basic concepts are illustrated by examples relevant to technological or medical applications. The course is designed for P.h.D students in chemistry, biochemistry and biotechnology, yet interested students on the M.S. level are welcome.

ChemS 320 - Advanced Organic Chemistry I (3)

A focus on a deeper understanding of the structure and reactivity of organic molecules with an emphasis on reaction mechanisms. It is a review of aspects of physical organic chemistry, covering structure and bonding, stereochemistry, and kinetics and thermodynamics, as well as molecular orbital theory with an introduction to the use of computational tools, such as Gaussian 09.

Prerequisite: Prerequisite: passed entrance exams or successfully completed ChemS101 and ChemS102.

ChemS 326 - Biocatalysis (3)

Biocatalysis has become an integral part of modern industry technology enabling rapid developments in pharmacology, medicine, nutrition, analytics, environmental technology, fine chemical synthesis biofuel production and related areas. Starting out from basic food-

processing fermentations e.g. related to bread baking or cheese making, today the results emerging from this discipline influence all areas of our daily life. Enzymes as nature's catalysts set the benchmarks for artificial systems in terms of activity and selectivity. Correspondingly, biocatalysis is regarded a key-competence in biotechnology and chemical industry. The course "Biocatalysis" provides students with a detailed understanding of fundamental aspects of the area, while it focuses on current applications of biocatalytic systems. It is designed for P.h.D students in chemistry, biochemistry and biotechnology, yet interested students on the M.Sc. level are welcome.

ChemS 330 - Advanced Inorganic Chemistry I (3)

Generalizations of the periodic table and their relationship to classical and modern concepts of atomic and molecular structure. Inorganic stereochemistry including concepts of crystal chemistry, silicate chemistry, coordination theory, ligand field theory, catalysis, acid-base theory, reaction mechanisms, organometallic chemistry and a detailed consideration of selected groups of the periodic table.

Prerequisite: Prerequisite: passed entrance exams or successfully completed ChemS101.

ChemS 340 - Advanced Organic Chemistry II (3)

Reactivity and reactions of organic moieties including enolates, carbenes, radicals, carbonyl compounds and transition metal organometallics; mechanisms of named reactions; multistep total synthesis techniques and reactions; advanced NMR and mass spectrometric techniques as applied to research efforts in organic chemistry and related fields, such as pharmaceuticals, materials science, supramolecular synthesis and crystal engineering.

ChemS 350 - Advanced Inorganic Chemistry II (3)

Emphasis on concepts and applications of homogenous and heterogeneous catalysis and the impact of such processes on the advancement of different industries.

ChemS 360 - Advanced Physical Chemistry I (3)

Thermodynamics and Kinetics Review fundamental concepts and laws of thermodynamics and kinetics. Learn and describe concepts of chemical potential, internal energy and chemical equilibrium of the system. Essence of kinetics to describe changes of chemical system with time, i.e. rates of chemical reactions, dealing with molecules in motion, collisions and diffusion of gases and how to establish rate expression.

Prerequisite: Prerequisite: passed entrance exams or successfully completed ChemS101 and ChemS103.

ChemS 370 - Advanced Physical Chemistry II (3)

Theoretical Chemistry (3-0-3) Review of quantum mechanics from a postulational viewpoint; variational and matrix methods; time independent and time-dependent perturbation theory; applications to molecular systems including potential energy surfaces and reaction pathways.

Prerequisite: Prerequisite: ChemS 360 or Approval by course instructor.

ChemS 393 - Doctoral Traveling Scholar

Doctoral level traveling scholar.

ChemS 394 - Contemporary Topics in Chemical Science (3)

A course of current basic science interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the program chair.

ChemS 395 - Doctoral Internship (0-12)

Doctoral level internship.

ChemS 397 - Doctoral dissertation Research (0-12)

Doctoral level research leading to a formal written dissertation and oral defense.

ChemS 398 - Graduate Seminar (0)

Graduate seminar focusing on special topics within the field.

Crosslisted as: CE 398 and ChemS 398.

ChemS 399 - Doctoral Directed Research (0-12)

Doctoral-level supervised research.

CS - Computer Science

CS 161 - Theory of Computer Science (0)

The course will progress through finite automata, circuits and decision trees, Turing machines and computability, efficient algorithms, reducibility, the P versus NP problem, NP-completeness, the power of randomness, and computational learning theory. It examines the classes of problems that can and cannot be solved by various kinds of machines. It tries to explain the key differences between computational models that affect their power. No degree credits for CS majors.

CS 199 - Directed Study in Computer Science (0)

A course of self-study in a particular topic as directed by faculty and approved by the division.

CS 201 - Introduction to Programming with Python (3)

This course is for the absolute beginner in computing. It covers the basics of programming in Python including variables, expressions, loops, conditions, lists, strings, functions, and standard and file I/O in a hands-on fashion. It also covers, at an introductory level, some Object-Oriented programming aspects like classes, modules and packages. Programming practice activities is divided between in-class ungraded lab exercises and for-credit homework assignments. Progress will be assessed via time-constrained programming quizzes and final exam. This course is offered for credit only to non-CS students. Computer Science students can register the course, but will not earn any credit.

CS 204 - Data Structures and Algorithms (3)

Prerequisites: instructor approval based on basic programming proficiency. This course teaches basic and advanced data structures such as linked lists, search trees, heaps, hash tables, etc ... It also covers algorithm design techniques like divide and conquer, transform and conquer, dynamic programming and greedy approaches. These techniques are applied to a variety of problems including sorting, graph problems, numerical problems, string processing. No degree credits for CS majors.

CS 205 - Systems Programming (3)

Prerequisites: instructor approval based on basic programming proficiency. This course provides a comprehensive and unified introduction to operating systems and concurrency control topics. It emphasizes both design issues and fundamental principles in contemporary systems and gives students a solid understanding of the key structures and mechanisms of operating systems. It also prepares the students to master concurrent and parallel programming by exposing the concepts of parallelism, synchronization and mutual exclusion. The course discusses design trade-offs and the practical decisions affecting design, performance and security. The course illustrates and reinforces design concepts and ties them to real-world design choices through the use of case studies. No degree credits for CS majors.

CS 207 - Programming Methodology and Abstractions (3)

Computer programming and the use of abstractions. Object-oriented programming, fundamental data structures

(such as stacks, queues, sets) and data-directed design. Recursion and recursive data structures (linked lists, trees, graphs). Introduction to basic time and space complexity analysis. The course teaches the mechanics of the C, C++ or Java language as well as an example of media library. No degree credits for CS majors.

CS 213 - Knowledge Representation and Reasoning (3)

The course covers basic concepts in knowledge representation, reasoning and its application in the Semantic Web. The aims of the course are to introduce key concepts of knowledge representation and its role in artificial intelligence, enable students to design knowledge-based systems and understand limitations and complexity of algorithms for representing knowledge.

CS 220 - Data Analytics (3)

Prerequisites: familiarity with algorithm runtime analysis (e.g., big O notations), probability theory (e.g. Gaussian distribution and conditional probability) and programming language (e.g., MATLAB or C++). The course covers basic concepts and algorithms for artificial intelligence, data mining and machine learning. The main contents are: artificial intelligence (task environment, performance measure and problem solving by searching), data mining (data and patterns, summary statistics and visualization, unsupervised feature selection and supervised feature selection) and machine learning (cross validation and supervised learning).

CS 229 - Machine Learning (3)

Prerequisites: linear algebra and basic probability and statistics. Familiarity with artificial intelligence recommended. Topics: linear and non-linear regression, nonparametric methods, Bayesian methods, support vector machines, kernel methods, Artificial Neural Networks, model selection, learning theory, VC dimension, clustering, EM, dimensionality reduction, PCA, SVD and reinforcement learning.

CS 230 - Computer Systems Security (3)

The course will provide an introduction to the fundamentals of computer system security and will cover both general theoretical aspects as well as applied methods of computer security. The course will focus on aspects such as: cryptography; program security; Web security; network security, and ML security.

CS 240 - Computing Systems and Concurrency (3)

Prerequisite: solid computer programming skills. Operating systems design and implementation. Basic

structure; synchronization and communication mechanisms; implementation of processes, process management, scheduling and protection; memory organization and management, including virtual memory; I/O device management, secondary storage and file systems. Concurrency at the hardware, programming language and operating system level.

CS 244 - Computer Networks (3)

Packet switching, Internet architecture, routing, router architecture, control algorithms, retransmission algorithms, congestion control, TCP/IP, detecting and recovering from errors, switching, Ethernet (wired and wireless) and local area networks, physical layers, clocking and synchronization. Assignments introduce network programming using NS-3, sockets, designing a router and implementing a transport layer. Also, advanced research papers on cloud computing, software define networking, and wireless sensor networks. The course consists of a final implementation project on a novel idea.

CS 245 - Databases (3)

Prerequisites: working knowledge of basic discrete mathematics e.g., sets, functions and relations) and programming skills. Database design and use of database management systems for applications. The relational model, relational algebra and SQL, the standard language for creating, querying and modifying relational and object-relational databases. XML data including the query languages XPath and XQuery. UML database design and relational design principles based on functional dependencies and normal forms. Other topics include indexes, views, transactions, authorization, integrity constraints and triggers. Advanced topics from data warehousing, data mining, Web data management, Datalog, data integration, data streams and continuous queries and data-intensive Web services.

CS 247 - Scientific Visualization (3)

Recommended prerequisites: Linear algebra, basic calculus, C/C++ programming experience. Recommended additional prerequisites: AMCS/CS 248 Computer Graphics, CS 380 GPU and GPGPU Programming, OpenGL programming experience. This course covers the basics and applications of scientific visualization. It covers techniques for generating images and interactive visualizations of various types of experimentally measured, computer-generated (simulated) or gathered data. It covers grid structures, scalar field and volume visualization, vector field and flow visualization, and tensor field visualization. It covers applications in science, engineering and medicine.

CS 248 - Computer Graphics (3)

Prerequisites: solid programming skills and linear algebra. The course first reviews the basic mathematical background necessary for computer graphics. Then fundamental computer graphics methods are being presented, such as the graphics pipeline, ray tracing, surface shading, and texturing. After the basic computer graphics knowledge fundamental theoretical background from signal processing and sampling are explained necessary for comprehension of further more advanced computer graphics topics. Advanced topics will include: computer animation, global illumination, light, color, introduction to visual perception and tone mapping, as well as global illumination, hardware-accelerated rasterization graphics, computer graphics in games and visualization.

CS 249 - Algorithms in Bioinformatics (3)

The course will introduce methods, algorithms, and data structures used in bioinformatics. The main focus will be on String algorithms used in sequence alignment and genome assembly, algorithms used in structural bioinformatics, pattern discovery in sequence data, phylogenetics, biological networks and graphs, and knowledge representation in biology. Broad topics will include dynamic programming, linear programming, tree and array structures for String matching, graph structures for genome alignment, and network algorithms to cluster and align networks.

Prerequisite: CS 260.

CS 260 - Design and Analysis of Algorithms (3)

Prerequisites: computer programming skills, probability, basic data structures and algorithms, basic discrete mathematics. The course covers main approaches to design and analysis of algorithms including important algorithms and data structures and results in complexity and computability. The main contents are: review of algorithm analysis (search in ordered array, binary insertion sort, merge sort, worst-case and average-case time complexity, minimum complexity of sorting n elements for small n , 2-3 trees, asymptotic notation); divide and conquer algorithms (master theorem, integer multiplication, matrix multiplication, fast Fourier transform); graphs (breadth-first search, connected components, topological ordering, depth-first search, way from planar graphs to Robertson-Seymour theorem); dynamic programming (chain matrix multiplication, shortest paths, edit distance, sequence alignment, extensions of dynamic programming); greedy algorithms (binary heaps, Dijkstra's algorithm, minimum spanning tree, Huffman codes, matroids); randomized algorithms (selection, quick sort, global minimum cut,

hushing); P and NP (Cook's theorem, examples of NP-complete problems); approximate algorithms for NP-hard problems or polynomial algorithms for sub problems of NP-hard problems (set cover, vertex cover, maximum independent set, 2-SAT); partial recursive functions (theorem of Post, Diophantine equations); computations and undecidable problems (existence of complex problems, undecidability of halting problem, theorem of Rice, semantic and syntactical properties of programs).

CS 272 - Geometric Modeling (3)

Prerequisites: Advanced and multivariate calculus, and linear algebra, computer graphics and programming experience. Terminology, coordinate systems and implicit forms. Parametric and spline representations of curves and surfaces and their uses. Basic differential geometry of curves and surfaces. Subdivision surfaces. Solid modeling paradigms and operations. Robustness and accuracy in geometric computations. Applications.

CS 283 - Deep Generative Modeling (3)

This course focuses on generative modeling. The topics covered in this course include Deep Generative Models (VAEs, GANs), Normalizing Flows, infinitesimal flows (Neural ODEs/SDEs, Deep Equilibrium Models), Energy-based Models, Variations and Combinations of Basic Generative Models, Generative Imitation Learning, Genetic Algorithms, Deep Fakes, Aesthetic guided Reinforcement Learning, Style Transfer, Cycle Consistent Generative Models, Creative Adversarial Networks, Algorithmic Art models, and 3D generative models. Story Generation, Transformer-based Text Generation, GPT based Text Generation, and Transformer GANs. All topics are around generative modeling from computer vision, Music, and NLP domains.

Prerequisite: Calculus, linear algebra, and preliminary deep learning hands-on background are required (e.g., PyTorch, TensorFlow, or Keras. These can be gained by any course that covers deep learning, even if partially (suggest at least 25% of the course). At KAUST, these courses may include any of these CS220, CS229, C323, CS326, CS320, CS340, or similar experience. The lecturer may also waive the prerequisite for students that demonstrate adequate knowledge of preliminary deep learning practice.

CS 293 - Master's Traveling Scholar

Master's level traveling scholar.

CS 294 - Contemporary Topics in Computer Science

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring

themes and topical interest. The content will be approved by the division.

CS 295 - Master's Internship (0-12)

Master's level internship.

CS 297 - Master's Thesis Research (0-12)

Master's level research leading to a formal written thesis and oral defense.

CS 299 - Master's Directed Research (0-12)

Master's level supervised research.

CS 320 - Probabilistic Graphical Models (3)

Prerequisite: Students are expected to be familiar with probability theory, algorithms, machine learning and programming language. This is a research-oriented graduate-level course on PGMs. The course will cover two main types of PGMs, i.e., directed PGMs and undirected PGMs. For directed PGMs we will cover Bayesian networks with one of its most important variants, hidden Markov models. For undirected PGMs, we will cover Markov networks (or Markov random fields) with one of its most important variants, conditional random fields. Therefore, the course contains four (4) parts: Bayesian networks, hidden Markov models, Markov networks and conditional random fields. In each part, motivations, ideas, definitions, examples, properties, representations, inference algorithms, and applications for the corresponding PGM will be introduced. This is done through lectures by the instructor. In the next two lectures, the students will present recommended research papers and lead in-class discussions. The last lecture of each part will be an in-class quiz, the purpose of which is not to judge their ability of calculation or memorization, but to push them to think more and deeper about the contents introduced in lectures. The course will finish by a final exam lecture and two project presentation lectures. The projects are expected to be a real application or a serious theoretical work of PGMs on real research problems.

CS 321 - Applications of AI in Bioinformatics (3)

Prerequisite: C/C++, HPC (parallel computing) programming experience. Recommended additional Course consists of selected projects. These projects cover application of AI to some of the relevant problems of analysis of large biological data and generally deal with complex information. Each year problems change. Students get assigned one project and they work either alone or in groups of 2. Students in the interactive discussions with the whole class and the instructor solve

the project problems. Students regularly present their progress and defend their approach and results in front of the whole class. During one semester several types of topics are dealt with. Students get direct experience in research methodology, report writing, presentations and most importantly, different ways of approaching solving AI problems

CS 322 - Applied Ontology (3)

The course covers advanced topics in conceptual modelling, data management, integration and analysis, all of which have applications in data-intensive disciplines such as biology, biomedicine and others. The aims of the course is to provide an in-depth understanding of the state of the art in formal ontologies, including their role in integrating and analyzing data. While Knowledge Representation and Reasoning (CS 213) introduced basic logic formalisms that can be used to express knowledge. Examples include the theories for mereological (parthood) relations, or theories of space and time and the consequences of selecting a particular theory in formalized knowledge bases. The Course is split in two parts, the first focusing on concrete applications with examples taken from the biomedical domain, the second focusing on the theoretical framework underlying formal ontologies and their role in information systems.

Prerequisite: CS 213.

CS 323 - Deep Learning for Visual Computing (3)

This course provides an overview of deep learning applications in visual computing. We will cover some basics of deep learning (optimization, network architecture, compression, ...) as well as selected applications (image recognition, segmentation, image synthesis, object detection, object synthesis, mesh segmentation, point cloud processing, ...). The selection of the applications is expected to change with different course offerings and will be adapted to the latest research papers in computer vision and computer graphics.

Prerequisite: CS 229, EE 354.

CS 326 - Low-Resource Deep Learning (3)

This course is intended as a second graduate level course on deep learning. Compared with CS323, this course will go into more recent / advanced deep learning techniques. The topics covered in this course includes zero/few-shot learning and meta-learning, long-tail recognition, deep generative models, deep graph convolutional networks, efficient continual learning, causal deep-learning. All the topics here are around some aspect of deep learning

efficiency.

Prerequisite: CS 323.

CS 331 - Stochastic Gradient Descent Methods (3)

Stochastic gradient descent (SGD) in one or another of its many variants is the workhorse method for training modern supervised machine learning models. However, the world of SGD methods is vast and expanding, which makes it hard for practitioners and even experts to understand its landscape and inhabitants. This course is a mathematically rigorous and comprehensive introduction to the field, and is based on the latest results and insights.

The course develops a convergence and complexity theory for serial, parallel, and distributed variants of SGD, in the strongly convex, convex and nonconvex setup, with randomness coming from sources such as subsampling and compression. Additional topics such as acceleration via Nesterov momentum or curvature information will be covered as well.

A substantial part of the course offers a unified analysis of a large family of variants of SGD which have so far required different intuitions, convergence analyses, have different applications, and which have been developed separately in various communities. This framework includes methods with and without the following tricks, and their combinations: variance reduction, data sampling, coordinate sampling, arbitrary sampling, importance sampling, mini-batching, quantization, sketching, dithering and sparsification.

CS 332 - Federated Learning (3)

This is a PhD level course in a new branch of machine learning: federated learning. In federated learning, machine learning models are trained on mobile devices with an explicit effort to preserve the privacy of users' data. Federated Learning combines areas such as supervised machine learning, privacy, distributed and edge computing, optimization, communication compression and systems. This is a new and fast-growing field with few theoretical results, and early production systems (e.g., Tensor Flow Federated). The aim of this course is to become familiar with the key results and practices of this field. As there is no textbook on this topic, the course material will be based on recent papers.

CS 337 - Information Networks (3)

Prerequisite: probability, stochastic systems, network architecture of the Internet and the systems performance. Modeling, experimental design, performance measurement, model development, analytic modeling,

single queue facility, networks of queues, stochastic systems, deterministic systems, birth-death model analysis, closed network model, bottleneck, interactive networks, M/M/m queues, M/G/1 priority queues, Markovian queuing model, random numbers, discrete event simulation, verification and validation of simulation models, workload characterization and benchmarks. Also, advanced research papers on using queuing theory for networking systems. The course consists of a final modeling and simulation project on a novel idea that leads to publication

CS 340 - Computational Methods in Data Mining (3)

Prerequisites: Probability and Statistics, Linear Algebra, Artificial Intelligence. Focus is on both classical and new emerging techniques in data mining. Topics include computational methods in supervised and unsupervised learning, association mining, collaborative filtering and graph mining. Individual or group applications-oriented programming project is required.

CS 341 - Advanced Topics in Data Management (3)

Topics in Data Management will be analyzed and discussed. Students will engage in research and project presentations. Topics will vary by semester.

Prerequisite: CS 245.

CS 344 - Advanced Topics in Computer Networks (3)

Prerequisites: solid computer networking background, excellent skills in programming using C/C++, using network simulators such as NS-3, working with Linux systems. Topics in Computer Networks will be analyzed and discussed. Topics will vary by a semester

Prerequisite: CS 244.

CS 345 - Advanced Topics in Distributed and Networked Systems (3)

This course is a graduate seminar that covers design and implementation concepts in distributed systems and networked systems by reviewing a selection of classical and contemporary papers. We will study efficient system design and evaluation as well as learn high-level system issues with a focus on exciting topics in distributed and networked systems. Research in these areas also tends to be scattered across disjoint sets of researchers and conferences and the course attempts to study commonalities. The syllabus for this course will vary from year to years so as to cover a mixture of older and more contemporary systems papers. Contemporary papers will be generally selected from the past 5 years, primarily

drawn from high quality conferences such as SOSP, SIGCOMM, OSDI, NSDI and EuroSys. On completion of this module students should have a broad understanding of some key papers and concepts in computer systems research, as well as an appreciation of how to argue for or against any particular idea. There is no textbook for this course.

CS 361 - Combinatorial Machine Learning (3)

The course covers tools for design and analysis of decision trees, decision rules and tests, their applications to supervised machine learning and related topics including current results of research. The main contents are: introduction (basic notions and examples from applications); tools (relationships among decision trees, rules and tests, bounds on complexity of tests, decision rules and trees, algorithms for construction of tests, decision rules and trees); applications (supervised machine learning); some of the additional topics (decision tables with many-valued decisions, approximate decision trees, rules and tests, global and local approaches to the study of problems over infinite sets of attributes, applications to combinatorial optimization, fault diagnosis, pattern recognition, analysis of acyclic programs, data mining and knowledge representation); current results of research.

Prerequisite: CS 260, CS 220.

CS 370 - Geometry Processing (3)

The course introduces into major topics, methods and applications of geometry processing, with a focus on computational design and fabrication.

CS 379 - Human-Centric Visualization (3)

Human-centric visualization discusses the data visualization methodology from the perspective of the user. The first part of the course builds up the knowledge about perceptual processing of biological vision, for better understanding why a certain visualization is effective or not. In the second part we discuss visual-arts-inspired algorithms for expressive visual depiction of the structure. Next, automated techniques are discussed that perform visibility management of densely populated, complex, and cluttered scenes as well as basic concepts of intuitive visual mapping specification, automated 3D camera navigation, and algorithms for textual labeling in interactive 3D visualization. The final part of the lecture is concerned with describing the principles of experimental user research, how to design and analyze user studies for evaluating visualization techniques.

The lectures are given by the lecturer and by the students

themselves in a form of a journal club. Parallel to lecturing, students will choose a larger programming project in the area of data visualization that they will complete over the course of the semester.

Prerequisite: CS 247 or CS 248.

CS 380 - GPU and GPGPU Programming (3)

Prerequisites: Good C/C++ programming skills, or other strong programming background. Understanding of basic computer architecture. Recommended optional CS 248, and CS 280. The course covers the architecture and programming of GPUs (Graphics Processing Units). It covers both the traditional use of GPUs for graphics and visualization, as well as their use for general purpose computations (GPGPU, GPU Computing). The main contents are: GPU many-core hardware architecture, shading and GPU programming languages and APIs, programming vertex, geometry and fragment shaders, programming with CUDA, Brook, OpenCL, stream computing, approaches to massively parallel computations, memory subsystems and caches, rasterization, texture mapping, linear algebra computations, alternative and future architectures.

CS 393 - Doctoral Traveling Scholar

Doctoral level traveling scholar.

CS 394 - Contemporary Topics in Computer Science

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

CS 395 - Doctoral Internship (0-12)

Doctoral level internship.

CS 397 - Doctoral Dissertation Research (0-12)

Doctoral level research leading to a formal written dissertation and oral defense.

CS 398 - Graduate Seminar (0)

Graduate seminar focusing on special topics within the field.

CS 399 - Doctoral Directed Research (0-12)

Doctoral level supervised research.

ECE - Electrical and Computer

Engineering

ECE 101 - Circuits (0)

Prerequisites: familiarity with Resistance, Capacitance, Electric current, Kirchhoff's rules, DC circuits and AC circuits. The course covers the fundamentals of the lumped circuit abstraction. The main contents are: independent and dependent sources; Resistive circuits RC, RL and RLC circuits in time domain and frequency domain; Impedance transformations; Two-port networks and parameters Operational amplifiers Filters, Diodes and Transistors. Small signal and large signal analysis. Includes a weekly laboratory.

ECE 102 - Analog Electronics (0)

This course covers the design, construction and debugging of analog electronic circuits. The main contents are: the basic principles of operation, terminal characteristics and equivalent circuit models for diodes, transistors and op-amps. Design and analysis of multistage analog amplifiers. Study of differential amplifiers, current mirrors and gain stages. Frequency response of cascaded amplifiers and gain-bandwidth considerations. Concepts of feedback, stability and frequency compensation. Includes a weekly laboratory.

Prerequisite: ECE 101.

ECE 103 - Solid State (0)

This course covers the physics of microelectronic semiconductor devices for Silicon integrated circuit applications. The main contents are: semiconductor fundamentals, p-n junction, metal-oxide semiconductor structure, metal semiconductor junction, MOS field-effect transistor and bipolar junction transistor. The course emphasizes physical understanding of device operation through energy band diagrams and MOSFET device design. Issues in modern device scaling are also outlined. Includes a weekly laboratory.

Prerequisite: ECE 101. Corequisite: ECE 102.

ECE 122 - Electromagnetic (0)

Prerequisites: familiarity with Resistance, Capacitance, Electric current and basic vector calculus. The course covers quasistatic and dynamic solutions to Maxwell's equations; waves, radiation, and diffraction. The main contents are: vector analysis and vector calculus; The laws of Coulomb, Lorentz, Faraday, Gauss, Ampere, Biot-Savart and Lenz. Dielectric and magnetic materials; Poisson equation solutions; Forces, Power and Energy in electric and magnetic fields; Capacitance and Inductance;

Maxwell's equations; Boundary conditions; Introduction to Wave equation; Poynting vector; Wave propagation and reflection. Includes weekly Simulations.

ECE 151 - Signal and Systems I (0)

Introduction to analog and digital signal processing, a topic that forms an integral part of engineering systems in many diverse areas, including seismic data processing, communications, speech processing, image processing, defense electronics, consumer electronics and consumer products. The course presents and integrates the basic concepts for both continuous-time and discrete-time signals and systems. It addresses the following topics: classifications of signals and systems, basic signal operations, linear time-invariant (LTI) systems, time-domain analysis of LTI systems, signal representation using Fourier series, continuous-time Fourier transform, discrete-time Fourier transform and Laplace transform.

ECE 152 - Signal and Systems II (0)

This course builds upon the material investigated in ECE 151 and addresses the following topics: z-transform, continuous-time filters, digital filters, finite impulse response (FIR) filter design, infinite impulse response (IIR) filter design, sampling and quantization and applications of digital signal processing including spectral estimation, digital audio, audio filtering and digital audio compression.

Prerequisite: ECE 151.

ECE 199 - Directed Study in Electrical and Computer Engineering (0)

A course of self-study in a particular topic as directed by faculty and approved by the division.

ECE 201 - Introduction to CMOS VLSI Circuits (3)

Design techniques for rapid implementations of very large-scale integrated (VLSI) circuits, MOS technology and combinational and sequential logic; Structured design; Design rules; layout design techniques; Computer Aided Design (CAD) layout; design rule checking; logic and circuit simulation; timing and power analysis.

ECE 202 - Analog Integrated Circuits (3)

This course covers principles of designing and optimizing analog and mixed-signal circuits in CMOS technologies, including an overview of device physics of the MOS transistor; small and large signal models; Analysis and design of CMOS multi-transistor amplifiers; feedback theory and application to feedback amplifiers; Stability considerations; pole-zero cancellation; root locus

techniques in feedback amplifiers and noise analysis.

ECE 203 - Solid-State Devices Fabrication (3)

Semiconductor material and device fabrication and evaluation: capacitors and field-effect transistors. Semiconductor processing techniques: oxidation, diffusion, deposition, etching, photolithography. Lecture and laboratory.

ECE 204 - Integrated Microsystems Laboratory (3)

Device physics and technology of advanced transistors and the process and device interplay that is critical for sub-100 nm metal oxide semiconductor (MOS) capacitors and field-effect transistors (MOSFETs) based microsystems design. Design of MOS interface circuits: relationships between processing choices and device performance characteristics. Long-channel device I-V review, short-channel MOSFET I-V characteristics including velocity saturation, mobility degradation, hot carriers, gate depletion. MOS device scaling strategies, silicon-on-insulator, lightly doped drain structures, on-chip interconnect parasitics and performance. Major CMOS scaling challenges. Process and circuit simulation.

ECE 205 - Introduction to MEMS (3)

Micro electro mechanical systems (MEMS), devices and technologies. Micro-machining and microfabrication techniques, including planar thin-film processing, silicon etching, wafer bonding, photolithography, deposition and etching. Transduction mechanisms and modeling in different energy domains. Analysis of micro machined capacitive, piezo resistive and thermal sensors/actuators and applications. Computer-aided design for MEMS layout, fabrication and analysis.

ECE 206 - Device Physics (3)

Structural properties of materials. Basic quantum mechanics of electrons in solids. Band theory and trap states. Charge transport, band conduction and hopping conduction. Optical properties of materials. Piezoelectric and ferro-electric phenomena. Magnetic effects in materials. Physical phenomena will be related transistors, light emitters, sensor and memory devices.

ECE 208 - Semiconductor Optoelectronic Devices (3)

Materials for optoelectronics, optical processes in semiconductors, absorption and radiation, transition rates and carrier lifetime. Principles of LEDs, lasers, photo detectors and solar cells. Designs, demonstrations and projects related to optoelectronic device phenomena.

ECE 221 - Electromagnetic Theory (3)

Maxwell equations, Lorentz force relation, electric and magnetic polarizations, constitutive relations, boundary conditions, Poynting theorem in real and complex forms, energy relations. Solution of Helmholtz equation: plane, cylindrical and spherical waves, dispersion, phase and group velocities, attenuation, wave propagation in anisotropic media. Electromagnetic theorems: uniqueness, duality, reciprocity, equivalence and induction theorems, Huygen and Babinet principles. Guided wave propagation: mode expansions, metallic and dielectric waveguides, resonant cavities. Antennas: potentials, radiation, elementary antennas

Prerequisite: ECE 122.

ECE 222 - Antenna Theory and Design (3)

Fundamental antenna system parameters: gain, directivity, efficiency, input impedance, radiation pattern. Theory of transmitting and receiving antennas: reciprocity, equivalence and induction theorems. Elementary antennas: dipole, monopole, loop, traveling-wave antennas. Antenna arrays: linear and phased arrays, mutual impedance. Antenna design: log-periodic, reflector, and (corrugated) horn antennas and micro strip, integrated and on-chip antennas. Computer aided design: student projects using antenna simulation tools.

Prerequisite: ECE 122.

ECE 223 - Microwave Circuits (3)

Pre-requisite: Undergraduate electromagnetics course. Desirable: Undergraduate Microwave course. Fundamental microwave concepts: Transmission-line theory and practical transmission line design, Smith Chart, impedance matching (L and stub matching networks), guided wave propagation and rectangular wave guide design, Z and Y parameters, S-parameters, ABCD matrix, Microwave Filters, Microwave system level concepts (Noise figure, Dynamic Range, Non-linearity), diode detectors, microwave transistors, microwave amplifier design concepts, Low Noise and Power Amplifier Design, Introduction to Microwave CAD tools, Microwave Design Simulation project

ECE 231 - Principles of Optics (3)

Prerequisites: basic knowledge of electromagnetic, signals and systems, and linear algebra. Basic principles of optics. Topics include classical theory of diffraction, interference of waves, study of simple dielectric elements such as gratings and lenses, analysis of Gaussian beams, elements of geometrical optics, Waveguides, interferometers and

optical resonators. The course aims at equipping the student with a set of general tools to understand basic optical phenomena and model simple optical devices.

ECE 232 - Applied Quantum Mechanics (Equivalent to MSE 232) (3)

Introduction to nonrelativistic quantum mechanics. Summary of classical mechanics, postulates of quantum mechanics and operator formalism, stationary state problems (including quantum wells, harmonic oscillator, angular momentum theory and spin, atoms and molecules, band theory in solids), time evolution, approximation methods for time independent and time-dependent interactions including electromagnetic interactions, scattering.

ECE 233 - Photonics (3)

Introduction to Photonics and integrated optics. Topics include the study of anisotropic media and anisotropic optical elements such as half/quarter-wave retarders, interaction of light and sound, elements of plasmonics, dielectric waveguides and optical fibers, bragg gratings, directional couplers and integrated optical filters. The course introduces the student to a variety of different integrated devices for the manipulation of optical signals, discussing also design and modeling principles.

Prerequisite: ECE 231.

ECE 242 - Digital Communication and Coding (3)

Digital transmission of information across discrete and analog channels. Sampling; quantization; noiseless source codes for data compression: Huffman's algorithm and entropy; block and convolutional channel codes for error correction; channel capacity; digital modulation methods: PSK, MSK, FSK, QAM; matched filter receivers. Performance analysis: power, bandwidth, data rate and error probability.

ECE 244 - Wireless Communications (3)

This course introduces fundamental technologies for wireless communications. It addresses the following topics: review of modulation techniques, wireless channel modeling, multiple access schemes, cellular communications, diversity techniques, equalization, channel coding, selected advanced topics such as CDMA, OFDM, Multiuser detection, space time coding, smart antenna, software radio.

Corequisite: AMCS 241, ECE 242.

ECE 245 - Wireless Sensors and Sensor Networks (3)

The course focuses on developing a thorough understanding of sensors, actuators and sensor networks spanning deployment, system architecture and communication requirements. MAC protocols, data gathering, routing and queuing are covered by using lectures and a series of specific examples and problems. These illustrate and require the student to understand analysis and design of sensors networks. Finally, the course introduces the student to advanced topics such as collaborative signal processing, distributed computation and security.

ECE 251 - Digital Signal Processing and Analysis (3)

Prerequisite: adequate background in linear algebra, multivariate optimization, signals and systems, Fourier series and Fourier transform. It addresses the following topics: sampling and quantization, multirate digital systems, discrete Fourier transform (DFT), windowed DFT, fast Fourier transform (FFT), digital filter design, decimation and interpolation filters, linear predictive coding, and an introduction to adaptive filtering.

ECE 253 - Wavelets and Time-Frequency Distribution (3)

Review of DTFT and digital filtering. Multirate filtering. Filter banks and subband decomposition of signals. Multiresolution subspaces. Wavelet scaling and basis functions and their design: Haar, Littlewood-Paley, Daubechies, Battle-Lemarie. Denoising and compression applications. Spectrogram, Wigner-Ville, Cohen's class of time-frequency distributions and their applications.

Prerequisite: ECE 251.

ECE 262 - Communication Networks

System architectures. Data link control: error correction, protocol analysis, and framing. Message delay: Markov processes, queuing, delays in statistical multiplexing, multiple users with reservations, limited service, priorities. Network delay: Kleinrock independence, reversibility, traffic flows, throughput analysis, Jackson networks, Multiple access networks: ALOHA and splitting protocols, carrier sensing, multi-access reservations. (Previously EE 243)

Corequisite: AMCS 241.

ECE 263 - Cyber-Physical Systems

This course introduces the tools and models that will allow attendees to develop high confidence in the resulting

system's proper operation prior to any operational test. Included are tools for model-based systems engineering, and cyber-physical system verification and validation currently in use by the CPS industry. Numerous examples will be considered, from aerospace, automotive, medical devices etc. The frequent presence of human operators is also acknowledged and discussed in-depth. Various verification and validation formalisms (formal methods) are described and applied to simple examples.

Crosslisted as: ME 226.

ECE 271A - Linear Control Systems (3)

First and Second Terms. (Same as ME 221A and ME 221B) Linear Algebra (AMCS 151), Differential Equations (AMCS 131), Signals and Systems (ECE 151 & ECE 152). Content: Core material in linear systems and optimal control. Topics in 271A: review of vector spaces, systems of linear equations, internal stability, controllability, observability, Lyapunov equations, input-output stability, linear matrix inequalities, stabilization, and state observers. Topics in 271B: The aim of this course is to introduce the student to the area of nonlinear control systems with a focus on systems' analysis and control design. Nonlinear phenomena including multiple equilibria, limit cycles and bifurcations will be presented. Lyapunov and input/output stability will be discussed. Examples of control design will be studied such as feedback linearization and sliding mode control.

Crosslisted as: ME 221A.

ECE 271B - Non Linear Control Systems (3)

First and Second Terms. (Same as ME 221A and ME 221B) Linear Algebra (AMCS 151), Differential Equations (AMCS 131), Signals and Systems (ECE 151 & ECE 152). Content: Core material in linear systems and optimal control. Topics in 271A: review of vector spaces, systems of linear equations, internal stability, controllability, observability, Lyapunov equations, input-output stability, linear matrix inequalities, stabilization, and state observers. Topics in 271B: The aim of this course is to introduce the student to the area of nonlinear control systems with a focus on systems' analysis and control design. Nonlinear phenomena including multiple equilibria, limit cycles and bifurcations will be presented. Lyapunov and input/output stability will be discussed. Examples of control design will be studied such as feedback linearization and sliding mode control.

Crosslisted as: ME 221B.

ECE 272A - Mechatronics and Intelligent Systems I (3)

(Same as ME 222A) Principles, modeling, interfacing and signal conditioning of motion sensors and actuators; acquire and analyze data and interact with operators. Basic electronic devices, embedded microprocessor systems and control, power transfer components and mechanism design. Hardware-in-the-loop simulation and rapid prototyping of real-time closed-loop computer control of electromechanical systems; modeling, analysis and identification of discrete-time or samples-data dynamic systems; commonly used digital controller design methods; introduction to nonlinear effects and their compensation in mechatronic systems; robotic manipulation and sensing; obstacle avoidance and motion planning algorithms; mobile robots, use of vision in navigation systems. The lectures will be divided between a review of the appropriate analytical techniques and a survey of the current research literature. Course work will focus on an independent research project chosen by the student.

Crosslisted as: ECE 272A and ME 222A.

ECE 272B - Mechatronics and Intelligent Systems II (3)

(Same as ME 222B) Principles, modeling, interfacing and signal conditioning of motion sensors and actuators; acquire and analyze data and interact with operators. Basic electronic devices, embedded microprocessor systems and control, power transfer components and mechanism design. Hardware-in-the-loop simulation and rapid prototyping of real-time closed-loop computer control of electromechanical systems; modeling, analysis and identification of discrete-time or samples-data dynamic systems; commonly used digital controller design methods; introduction to nonlinear effects and their compensation in mechatronic systems; robotic manipulation and sensing; obstacle avoidance and motion planning algorithms; mobile robots, use of vision in navigation systems. The lectures will be divided between a review of the appropriate analytical techniques and a survey of the current research literature. Course work will focus on an independent research project chosen by the student.

Crosslisted as: ECE 272B and ME 222B.

ECE 273A - Advanced Dynamics

First and Second Terms (Same as ME 232A and ME 232B) Content Analysis of models described by nonlinear differential equations. Topics: equilibria, stability, Lyapunov functions, periodic solutions, Poincaré Bendixon theory, Poincaré maps, attractors and structural stability, the Euler-Lagrange equations, mechanical systems, small oscillations, dissipation, energy as a Lyapunov function,

conservation laws, introduction to simple bifurcations and eigenvalue crossing conditions, Discussion of bifurcations in applications, invariant manifolds, the method of averaging, Melnikov's method and the Smale horseshoe.

Corequisite: AMCS 201, AMCS 202. Crosslisted as: ECE 273A and ME 232A.

ECE 273B - Advanced Dynamics

First and Second Terms (Same as ME 232A and ME 232B) Content Analysis of models described by nonlinear differential equations. Topics: equilibria, stability, Lyapunov functions, periodic solutions, Poincaré Bendixon theory, Poincaré maps, attractors and structural stability, the Euler-Lagrange equations, mechanical systems, small oscillations, dissipation, energy as a Lyapunov function, conservation laws, introduction to simple bifurcations and eigenvalue crossing conditions, Discussion of bifurcations in applications, invariant manifolds, the method of averaging, Melnikov's method and the Smale horseshoe.

Corequisite: AMCS 201, AMCS 202. Crosslisted as: ECE 273B and ME 232.

ECE 274 - System Identification and Estimation (3)

Topics: Deterministic state estimation, recursive observers, estimation for uncertain process dynamics; SISO and MIMO least-squares parameter estimation, linear system subspace identification, random variables and random processes, linear systems forced by random processes, power-spectral density, Bayesian filtering including Kalman filter, jump-Markov estimation and fault diagnosis, nonlinear estimation, particle filters, unscented Kalman filter, introduction to estimation for hybrid systems.

Prerequisite: ECE 271A. Corequisite: ECE 271B.

ECE 275 - Robot Planning and Control (3)

This course introduces the basic tenets of robot planning and control and related concepts in localization, sensing, and perception. Key modules of the course are organized to answer the following questions: 1) how to develop mathematical representation of robot motion, 2) how to design feedback systems to control robots, and 3) how to plan and compute trajectories for robots to perform given tasks? Students are expected to develop high confidence and skill sets in modeling dynamics and designing planning and control algorithms for robotic systems. Numerous examples of robotic systems will be discussed, and physics simulators will be used to demonstrate and also for student participation to learn how robot planning and control algorithms can be designed and implemented.

Prerequisite: ECE 271A.

ECE 293 - Master's Traveling Scholar

Master's level traveling scholar.

ECE 294 - Contemporary Topics in Electrical and Computer Engineering (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

ECE 295 - Master's Internship (0-12)

Master's level internship.

ECE 297 - Master's Thesis Research (0-12)

Master's level research leading to a formal written thesis and oral defense.

ECE 299 - Master's Directed Research (0-12)

Master's level supervised research.

ECE 301 - Advanced VLSI Systems (3)

This course offers a system level approach toward VLSI design and covers a wide range of topics, including digital IC flow, synthesis and placement and routing, FPGA design and Verilog implementation, complex arithmetic units, clock distribution, timing considerations and skew tolerant design, VLSI functional testing and verification.

Prerequisite: ECE 201.

ECE 302 - Integrated Analog/Digital Interface Circuits (3)

This course covers most of the well-known digital-to-analog and analog-to-digital conversion schemes. These include the flash, folding, multi-step and pipeline Nyquist rate, architectures. Oversampling converters are also discussed. Practical design work is a significant part of this course. Students design and model complete converters.

Prerequisite: ECE 202.

ECE 303 - Integrated Circuits (3)

Alternate device architectures, materials and physics for integrated circuits based on alternate channel materials like SiGe, Ge, III-V, two (2) dimensional materials such as graphene, dichalcogenides, one (1) dimensional nanowire and nanotube architecture devices, tunneling FET, spin logic, ferroelectric devices, nanoelectromechanical (NEM) switches and such for logic computation and ultra-mobile

communication devices.

ECE 304 - Integrated Microsystems (3)

Integrated systems including MOS circuits, energy harvesting, MEMS sensors and actuators to understand the design rule, process integration, physical and electrical characterization of fabricated systems.

Prerequisite: ECE 203, ECE 205.

ECE 305 - Advanced MEMS Devices and Technologies (3)

Advanced micro electro mechanical systems (MEMS) devices and technologies. Transduction techniques, including piezoelectric, electro thermal and resonant techniques. Chemical, gas and biological sensors; microfluidic and biomedical devices. Micromachining technologies such as laser machining and micro drilling, EDM, materials such as SiC and diamond. Sensor and actuator analysis and design through CAD.

Prerequisite: ECE 205.

ECE 306 - Electronic and Optical Properties of Semiconductors (3)

The course discusses in detail the theory behind important semiconductor based experiments such as Hall Effect and Hall mobility measurement, velocity-field measurement, photoluminescence, gain, pump-probe studies, pressure and strain dependent studies. Theory will cover: Band structure in quantum wells; effect of strain on band structure; transport theory; excitons, optical absorption, luminescence and gain.

ECE 307 - High-Speed Transistors (3)

Detailed theory of high-speed digital and high-frequency analog transistors. Carrier injection and control mechanisms. Limits to miniaturization of conventional transistor concepts. Novel submicron transistors including MESFET, heterojunction and quasi-ballistic transistor concepts.

Prerequisite: ECE 204.

ECE 308 - Semiconductor Lasers and LEDs (3)

Optical processes in semiconductors, spontaneous emission, absorption gain, stimulated emission. Principles of light-emitting diodes, including transient effects, spectral and spatial radiation fields. Principles of semiconducting lasers, gain-current relationships, radiation fields, optical confinement and transient effects.

Prerequisite: ECE 208.

ECE 309 - Flexible and Stretchable Electronics (3)

Prerequisite: College level knowledge on Physics, Chemistry, Mathematics and Biology. In this course we will study physics and mechanics, materials and chemistry, devices and circuits and finally system level integration aspects of flexible, stretchable and reconfigurable electronics.

ECE 310 - Integrated Sensors (3)

The design and implementation of monolithic and hybrid sensors using integrated circuits, particularly in CMOS is presented. Performance metrics of sensors will be defined. The advantages and shortcomings of sensors built in silicon-based fabrication processes will be analyzed. A comprehensive study of the design and analysis of CMOS integrated image sensors, integrated biosensors and electronic backbone of MEMS hybrid sensors including silicon photodetectors; CCD and CMOS sensor architectures and circuits; affinity-based detection and biochemical transduction, integrated microarrays, biochips and sensor SoCs will be studied.

ECE 311 - Solid State Devices Laboratory (3)

This course is focused on hand-on training on fabrication of solid state devices in the cleanroom environment to manufacture micro and nano-scale devices for logic computation, memory devices, display technology, sensor/actuator applications.

Prerequisite: ECE 203.

ECE 312 - Semiconductor Epitaxy and Devices (3)

This course explains how innovative technologies on semiconductor epitaxy produce novel devices. The understanding of semiconductor epitaxial technologies is crucial to growing the intended structures. The epitaxial technology covers Si bulk, compound-semiconductor bulk, thinfilm structures, and quantum structures. Especially, molecular-beam epitaxy and metalorganic vapor-phase epitaxy will be explained from their principles. As the application of those technologies, the course introduces the students to the laser-diode structures and their growth by different technologies.

ECE 321 - Numerical Methods in Electromagnetics (3)

Introduction to computational electromagnetics. Finite difference time domain method: fundamentals, absorbing boundary conditions, perfectly matched layers. Integral equations: fundamentals, method of moments, Galerkin schemes, fast solvers. Finite element method:

fundamentals, vector and higher-order basis functions, hybridization of finite and boundary element methods. Applications of these methods in problems of electromagnetics, optics and photonics.

Prerequisite: ECE 221.

ECE 323 - Microwave Measurements Laboratory (3)

Advanced topics in microwave measurements: introduction to state-of-the-art microwave test equipment (Vector Network analyzer, spectrum analyzer), power spectrum and noise measurements, calibration, S-parameter and impedance measurements, methods for measuring the dielectric constant of materials, Low Noise and Power amplifier measurements, Non-linearity measurements, near-field and far-field antenna pattern measurements, Printed Circuit Board (PCB) design and fabrication, Introduction to Microwave and Antenna CAD tools. Followed by a project that includes design, analysis, fabrication and testing of a microwave subsystem.

Prerequisite: ECE 221 or ECE 222, ECE 223.

ECE 325 - Advanced Photonics Concepts and Applications (3)

The course introduces the student to advanced types of photonics systems. The course focuses on real-world devices and modern theories, which can be used in research to study complex light-matter interactions and in industrial environments to model, design, and optimize different types of integrated devices.

Prerequisite: ECE 231.

ECE 331 - Classical Optics (3)

Theory of electromagnetic, physical and geometrical optics. Classical theory of dispersion. Linear response, Kramers-Kronig relations and pulse propagation. Light scattering. Geometrical optics and propagation in inhomogeneous media. Dielectric waveguides. Interferometry and theory of coherence. Diffraction, Fresnel and Fraunhofer. Gaussian beams and the ABCD law.

Prerequisite: ECE 231.

ECE 332 - Optical Waves in Crystals (3)

Propagation of laser beams: Gaussian wave optics and the ABCD law. Manipulation of light by electrical, acoustical waves; crystal properties and the dielectric tensor; electro-optic, acousto-optic effects and devices. Introduction to nonlinear optics; harmonic generation, optical rectification, four-wave mixing, self-focusing and self-phase

modulation.

Prerequisite: ECE 233.

ECE 333 - Lasers (3)

Complete study of laser operation: the atom-field interaction; homogeneous and inhomogeneous broadening mechanisms; atomic rate equations; gain and saturation; laser oscillation; laser resonators, modes and cavity equations; cavity modes; laser dynamics, Q-switching and mode-locking. Special topics such as femto-seconds lasers and ultra-high-power lasers.

Prerequisite: ECE 331.

ECE 334 - Nonlinear Optics (3)

Formalism of wave propagation in nonlinear media, susceptibility tensor, second harmonic generation and three (3)-wave mixing, phase matching, third-order nonlinearities and fourwave mixing processes, stimulated Raman and Brillouin scattering. Special topics: nonlinear optics in fibers, including solitons and self-phase modulation.

Prerequisite: ECE 331, ECE 333.

ECE 335 - Advances in Semiconductor UV Devices (3)

The wide-bandgap semiconductor, also known as the third-generation semiconductor, is among the most invested and active research fields around the globe. Because of its superior optical and electronic properties as well as high stability, it has been deployed in almost every product that runs on electricity. As a result, hundreds of billions of dollars of economy and massive employment opportunities have been created. The Nobel Prize in Physics 2014 awarded to the inventors of blue LED is a direct result of the wide-bandgap semiconductor research. However, the research is still at its infancy with numerous unexplored territories and enormous opportunities ahead. This course will focus on cutting-edge research of wide bandgap semiconductor optical and electronic devices. Each student would have the opportunity of diving deep into one sub research topic and strive to become an expert. The course study will be closely related to the ongoing research at KAUST and many leading labs in the world. Thus, the students will be able to potentially author scientific papers. The course teaching will implement active learning to cultivate students' enthusiasm, higher-order thinking ability, and intellectual agility, which are critical for becoming a successful scientist or engineer. Out of many potential applications of III-nitride semiconductors, UV LED is regarded as the key technology to chemical curing and produce clean water & air. The market potentials are

enormous. However, its efficiency today is 40 times lower than that of blue LED. Specifically, the students are expected to use a software to design UV LED emitting at 280 nm by using polarization engineering with the goal of improving its internal quantum efficiency (IQE) compared to a conventional design. The IQE comprises two parts: carrier injection efficiency and radiative recombination efficiency. The polarization is a unique property the III-nitride semiconductors possess. It can either bend up or down conduction and valence bands, thereby changing how electrons and holes move and recombine. Thus it can play in key role in enhancing or lowering the carrier injection efficiency and radiative recombination efficiency.

Prerequisite: ECE 208, ECE 206.

ECE 341 - Information Theory (3)

The concepts of source, channel, rate of transmission of information. Entropy and mutual information. The noiseless coding theorem. Noisy channels, the coding theorem for finite state zero memory channels. Channel capacity. Error bounds. Parity check codes. Source encoding.

Prerequisite: AMCS 241.

ECE 343 - Digital Communication Theory (3)

Prerequisites: A strong background in linear algebra, detection and estimation and a working knowledge of optimization and discrete Fourier transform (DFT). It addresses the following topics: review of digital modulation techniques and maximum likelihood detectors, fading channels, diversity techniques, multiple-input/multiple-output (MIMO) systems, space-time coding and orthogonal frequency-division multiplexing (OFDM).

Prerequisite: AMCS 241, ECE 242.

ECE 344 - Advanced Wireless Communication Systems (3)

This is an advanced course in wireless communication theory, providing a brief review of fundamental concepts in wireless communications followed by in-depth discussions on several topics related to the performance analysis of modern wireless communication systems and networks.

Prerequisite: ECE 244.

ECE 345 - Advanced Wireless System Architecture (3)

This course provides a balanced approach based on theoretical and practical knowledge for students to understand how modern mobile wireless systems are

architected. The course will benefit students engaging in research in the field of communication and signal processing. The topics include: wireless channel modelling, path loss calculation, modulation, wireless sensor networking, case studies of wireless physical layer and multiple access layers.

Prerequisite: ECE 242.

ECE 351 - Advanced Signal Processing (3)

Estimators of second-order properties of random processes: nonparametric and model-based techniques of spectral estimation, characterization of output statistics for nonlinear systems, time-frequency representations. Performance evaluation using asymptotic techniques and Monte Carlo simulation. Applications include speech processing, signal extrapolation, multidimensional spectral estimation and beam forming.

Prerequisite: AMCS 241, ECE 251.

ECE 352 - Image Processing (3)

Prerequisites: multi-variable calculus and linear algebra. This course gives an overview of the theoretical and practical foundations of digital image processing, including random field models of images, sampling, quantization, image compression, enhancement, restoration, segmentation, shape description, reconstruction of pictures from their projections, pattern recognition. Applications include biomedical images, time-varying imagery, robotics and optics.

Prerequisite: ECE 251.

ECE 353 - Adaptive Signal Processing (3)

Theory and applications of adaptive filtering in systems and signal processing. Iterative methods of optimization and their convergence properties: transversal filters; LMS (gradient) algorithms. Adaptive Kalman filtering and least-squares algorithms. Specialized structures for implementation (e.g., least-squares lattice filters, systolic arrays). Applications to detection, noise canceling, speech processing and beam forming.

Prerequisite: AMCS 241, ECE 251.

ECE 354 - Introduction to Computer Vision (3)

Prerequisites: Multi-variable calculus and linear algebra. This course gives an introductory overview of concepts (e.g. photometric and multi-view stereoscopy, epipolar geometry, interest point detection and description), problems (e.g. image-to-image matching and alignment, image classification, clustering/ segmentation, face

recognition) and methodology (e.g. linear/nonlinear image filtering, RANSAC for robust fitting, discriminative and generative models) in the field of computer vision. It is intended to provide a solid background for students, who are planning to do research in visual computing.

ECE 355 - Estimation, Filtering and Detection (3)

Principles of estimation, linear filtering and detection. Estimation: linear and nonlinear minimum mean squared error estimation and other strategies. Linear filtering: Wiener and Kalman filtering. Detection: simple, composite, binary and multiple hypotheses. Neyman-Pearson and Bayesian approaches.

Prerequisite: AMCS 241.

ECE 372 - Dynamic programming and Optimal Control (3)

Prerequisites: Familiarity with basic probability, optimization and differential equations. Dynamic programming is a framework for deriving optimal decision strategies in evolving and uncertain environments. Topics include the principle of optimality in deterministic and stochastic settings, value and policy iteration, connections to Pontryagin maximum principle, imperfect state measurement problems and simulation-based methods such as online reinforcement learning.

ECE 374 - Advanced Control Systems (3)

(Same as ME 324) Introduction to modern control systems with emphasis on the role of control in overall system analysis and design. Input-output directions in multivariable systems: eigenvalues and singular value decomposition. System norms and introduction to MIMO robustness. Controller design for multivariable plants: linear quadratic regulator, linear quadratic Gaussian optimal control, H-infinity and H-2 control, sampled-data, model predictive control. Convex design methods: Youla parameterization, linear matrix inequalities; adaptive control, neural networks, fuzzy logic systems; introduction to neurofuzzy systems and soft computing. Multivariable control design examples drawn from throughout engineering and science in the field of aerospace, automotive, chemical- and energy-efficient buildings.

Prerequisite: AMCS 201, AMCS 202, ECE 271A, ECE 271B.

ECE 376 - Robust Control (3)

(Equivalent to ME 326) Contents: Advanced methods for control design of multivariable linear systems subject to modeling errors. Topics: Signal and system norms and

performance measures, robust stability and performance, linear fractional transformations, uncertainty modeling, optimal disturbance rejection, structured uncertainty analysis and synthesis, model reduction.

Prerequisite: AMCS 201, AMCS 202, ECE 271A, ECE 271B. Crosslisted as: ECE 376 and ME 326.

ECE 393 - Doctoral Traveling Scholar (0-12)

Doctoral level traveling scholar.

ECE 394 - Contemporary Topics in Electrical and Computer Engineering (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

ECE 395 - Doctoral Internship (0-12)

Doctoral level internship.

ECE 396 - Math Models in Computer Vision and Image (3)

Doctoral-level lectures focusing on state of the art within the field.

ECE 397 - Doctoral Dissertation Research (0-12)

Doctoral level research leading to a formal written dissertation and oral defense.

ECE 398 - Graduate Seminar (0)

Graduate seminar focusing on special topics within the field.

ECE 399 - Doctoral Directed Research (0-12)

Doctoral level supervised research.

EnSE - Environmental Science and Engineering

EnSE 199 - Directed Study in Environmental Science (0)

A course of self-study in a particular topic as directed by faculty and approved by the division

EnSE 201 - Water Quality and Environmental Analysis (3)

The course covers introduction to water quality parameters (with a focus on toxic pollutants), pollutants properties, measurement techniques, and control technologies. Fate

and transport of pollutants in relation with their physicochemical properties, risk assessment in relationship to water quality. Environmental analytical techniques, drinking water and domestic wastewater treatment are included.

EnSE 202 - Aquatic Chemistry (3)

The course covers chemistry of processes in aquatic systems, natural water composition, characteristics and analysis (inorganic and organic composition, ionic balance, pH, conductivity, turbidity), acids and bases, carbonate system, chemistry of metals, precipitation, and redox chemistry.

EnSE 203 - Fundamentals of Environmental Microbiology (3)

This course is designed to provide introductory concepts on fundamentals of environmental microbiology to students from different engineering and science disciplines. Concepts related to the different molecular biology tools used in microbial ecology will also be introduced. The course will equip students with knowledge to apply these tools to unravel scientific questions relevant to natural and engineered biological processes.

EnSE 205 - Principles of Environmental Sustainability (3)

Fundamental aspects of sustainability, water and energy cycles and accounting. Climate change, water-food nexus, carbon cycle, emissions and sequestration. Concepts of green design. Life-cycle analysis. Assignments (each report is over 3 to 4 weeks).

EnSE 222 - Surface Hydrology (3)

Fundamentals of surface hydrology, the hydrologic cycle, hydrologic processes, and water management with an emphasis on arid lands

EnSE 223 - Groundwater Hydrology (3)

Groundwater hydrology, subsurface flow, geological considerations, aquifers and wells.

EnSE 293 - Master's Traveling Scholar

Master's level traveling scholar.

EnSE 294 - Contemporary Topics in Environmental Science (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

EnSE 295 - Master's Internship (0-12)

Master's level internship.

EnSE 297 - Master's Thesis Research (0-12)

Master's level research leading to a formal written thesis and oral defense.

EnSE 299 - Master's Directed Research (0-12)

Master's level supervised research.

EnSE 310 - Colloids, Interfaces, and Surfaces (3)

The course covers a variety of topics in surface science, including surface tension and surface free energy (theory and measurement methods), surface films on liquid substrates (surface potential, monomolecular films, Langmuir-Blodgett layers), capillarity, gecko effect, electrical aspects of surface chemistry (electrical double layer, zeta potential, DLVO theory), surface of solids, solid-liquid interface, stability of dispersions, stabilization of suspensions, contact angle (theory and measurement methods), emulsions, foams and aerosols, wetting of surfaces by liquids, lotus effect, flotation, aggregation and flocculation, detergency, surfactants, self-assembly, micelles and vesicles, friction, lubrication and adhesion, adsorption, characterization of colloidal particles, etc. Applications of colloid and surface science in petroleum recovery, coating and painting, food, pharmaceutical and cosmetic industry will also be covered. Surface characterization methods will be introduced.

EnSE 314 - Public Health Microbiology (3)

An introduction to the diversity of microbial agents that can impact the public health and environmental systems. The course is structured to detail the microbial hazards found in waters, soils and air. Molecular biology techniques and the current regulatory methods for investigating pathogens and the surrogate indicators will be discussed. Treatment and engineering strategies are discussed. The latter part of the course serves to provide an introduction to Quantitative Microbial Risk Assessment (QMRA). The concepts related to exposure assessment and risk characterization will be included. Practical lab classes will be incorporated as soon as student laboratories are available. This course also includes practical lab component where some of the fundamental principles taught during lectures will be recapped.

EnSE 316 - Advanced Topics in Environmental Science and Engineering (3)

The course reviews current topics in environmental science and engineering, particularly relying on scientific journal

publications to provide case studies, illustrative examples, classic studies and controversial findings pertinent to specific fields within environmental science and engineering. The course will feature an emphasis on primary literature searches, reading and assessment of primary literature. It is expected that the student reads no less than 5 scientific papers per week in the prescribed topic area and is capable of presenting and critically discussing the content of these publications. In this level 300 course, the student assessment is based on active participation in the lectures and tutorials.

EnSE 317 - Selected Topics in Green Process Technology (3)

Green Process Technology implies a reduced environmental footprint of the production of food, water, and other materials. In the course, the process efficiency is treated for examples in drinking water preparation, and other aqueous separations by calculating the minimum thermodynamic work required for separation, the lost work, and the generation of entropy by (coupled) irreversible processes. The course material further includes i) basic statistical mechanical calculations on entropy driven processes such as osmosis, ii) electrochemical driving forces for (bio-)chemical reactions and transport over a cell membrane, iii) examples of industrial separation technologies, iv) industrial crystallisation, v) Natural Deep Eutectic Solvents (NADES) and ionic liquids, vi) processes using supercritical carbon dioxide as solvent, vii) Mollier diagrams for air humidity calculations, viii) a global exergy (useful energy) dissipation diagram for both renewable and fossil sources.

EnSE 325 - Water Desalination (3)

Theoretical and practical aspects of seawater/brackish water desalination technologies, including thermal-based (MSF, MED, VC) and membrane-based (RO, NF, ED/EDR), and emerging (FO, MD, AD) desalination processes; process design and system performance; fouling, scaling (including bio-fouling) and cleaning; product water quality and post-treatment.

EnSE 341 - Processes in Environmental Biotechnology (3)

A course that introduces students from different engineering and science disciplines to the fundamental principles of microbiology and engineering (quantitative tools) and discusses example applications (traditional and emerging) of microbiological processes for wastewater treatment and resource recovery. This course also includes a lab practical where students apply the basic principles taught in the course in the design of microbiological

processes.

EnSE 342 - Physical/Chemical Treatment Processes (3)

Water-treatment processes, membranes, advanced oxidation, principles and techniques of water desalination.

Prerequisite: EnSE 202 (please note: prerequisites are for M.Sc. students only).

EnSE 393 - Doctoral Traveling Scholar

Doctoral level traveling scholar.

EnSE 394 - Contemporary Topics in Environmental Science (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

EnSE 395 - Doctoral Internship (0-12)

Doctoral level internship.

EnSE 397 - Doctoral Dissertation Research (0-12)

Doctoral level research leading to a formal written dissertation and oral defense.

EnSE 398 - Graduate Seminar (0)

Graduate seminar focusing on special topics within the field.

EnSE 399 - Doctoral Directed Research (0-12)

Doctoral level supervised research.

ERPE - Energy Resources and Petroleum Engineering

ERPE 200 - Energy and the Environment (3)

Prerequisites: Introductory calculus, physics, chemistry, thermodynamics. Possible futures of humanity based on current trends. Analyses based on laws of mass and energy conservation and thermodynamics to evaluate overall efficiencies of major human energy supply schemes: fossil, solar, wind, and biomass. Irreversible linear processes, and sustainable/unsustainable cycles. Relationship between ecosystems (ancient and new), their energy storage and throughput, and energy production and its side effects. Analysis of inadequate economic theories that hamper understanding of the relationship between human economy and the Earth's economy (ecology). Most course assignments will be done in MATLAB

ERPE 210 - Fundamentals of Carbonate Geology (3)

Prerequisite: Basic knowledge of Geology. Historical development of carbonate fields. Carbonates mineralogy. Depositional environments. Classification systems. Evolution from sediments to rocks. Diagenesis: driving forces and physical environments. Dolomitization. Generation of rock sequences: facies, facies belts, facies stacking and stratigraphy. The role of porosity, its creation, alteration and classification. Carbonate rock systems for the oil industry. Lab Work: core description, petrography, microscopy, petrographic and geochemical tools.

ERPE 211 - Data Integration for Geomodelling (3)

The purpose of this foundational course is to provide an overview of the different datasets available at the surface and in the subsurface to build regional geological syntheses and static reservoir scale models, and how to incorporate these in interpretation workflows. The treated subsurface data includes seismic, well logs, core and cuttings, and the surface data comprises outcrop exposures, shallow seismic and coring, geological maps and satellite information. A large variety of analytical measurements can be performed on the rock sample data, of which the most relevant will be summarized. Geological age determination will receive special attention due to its importance for the model building, both local and at the regional to global scale. Where appropriate, the course will also briefly summarize the data acquisition and processing techniques, and address the challenge of the integration of the different scales of observation (from the pore network to the seismic line) in integrated workflows.

ERPE 220 - Sediments: Properties and Processes (3)

Prerequisite: Introductory calculus, physics, chemistry, thermodynamics. Fundamental concepts (Geological history. Governing laws. Biological considerations. Water. Sediment formation and diagenesis). Particulate media (Interparticle forces and effective stress. Fabric. Classification). GeoMechanics (Effective stress. Numerical micromechanics. Strain regimes. Deformation and failure. Biot, Terzaghi, Skempton. Repetitive loading). Coupled Bio-Thermo-Hydro-Chemo-Mechanical Processes (Mixed fluids. Conduction phenomena. Diffusion Phenomena. Thermal properties. Couplings). Localizations, scales and spatial variability. Implications in energy geo-engineering, infrastructure and environmental solutions.

ERPE 221 - Geoscience Fundamentals (3)

Overview of physical geology, mineralogy, petrology, stratigraphy, structural geology, tectonics, volcanism, hydrology, geochemistry, geophysics, marine geology,

economic and environmental geology. Suitable for students who lack a basic understanding of geology and as a pre-requisite for advanced Earth Science courses. Includes laboratory exercises and a weekend field trip.

ERPE 230 - Rock Mechanics for Energy Geo-Engineering (3)

Prerequisites: Introductory calculus, physics, mechanics. Rock formation; tectonism; geological structures and reservoirs. Fractured rock mass (Fracture characterization, description of fracture sets); intact rock versus fractured rock. Initial conditions: stress field in the earth crust, fluid composition and pressure. Hydraulics: matrix and fractures; mixed fluids and reactive fluids; evolution of fluid pressure during production. Mechanics: strain hardening and softening, strain localization, tensile and shear failure, creep, constitutive models and yield-envelope. Thermal properties and heat transfer. Classical hydro-mechanical coupling (effective stress, reservoir compaction, deformation, fault reactivation), and multi-HTCM couplings. Well and reservoir engineering: drilling and stimulation in various formations. Challenges: shale instability, sand production and creep. Laboratory and field rock and rock mass characterization.

ERPE 240 - Fractals, Percolation and Pore-scale Flow (3)

Prerequisites: Introductory calculus, physics, chemistry, thermodynamics, and MATLAB programming. Fractals, their construction and dimensions, bond and site percolation, and cluster analysis. Equations of capillarity, contact angles, thermodynamics of interfaces. Creeping flow of two and three immiscible fluids in porous media. Pore-level characterization of sediments; pore networks; invasion percolation in drainage and imbibition; description of capillary pressures and relative permeabilities in two- and three-phase flow in mixed-wet rocks. Applications to geology, petroleum, environmental, geotechnical, mechanical, and chemical engineering. Most course assignments will use MATLAB.

ERPE 241 - Multiphase Flow in Porous Media (3)

Prerequisite: Introductory calculus, physics, chemistry, thermodynamics. Basic physical laws that govern flow and transport in porous media. Rock and fluid properties. Derivation of mathematical models for multiphase flow in subsurface porous media. Finite difference methods. Mass-conservative block-centered finite difference scheme. Pressure, saturation and species transport equations. Finite volume and finite element numerical models.

ERPE 250 - Reservoir Engineering Fundamentals and Applications (3)

Prerequisites: Basic knowledge of multiphase flow in porous media, thermodynamics, and MATLAB programming. Basic concepts: hydrocarbon PVT/thermodynamics, material balance, uncertainty analysis, drive mechanisms, vertical equilibrium, capillarity and J-functions. Primary depletion: recovery mechanism and performance evaluation. Secondary depletion: displacement efficiency, Buckley-Leverett theory, mobility ratio, sweep efficiency, well placement, water flood evaluation and tracer concept. Reservoir simulation: governing equations, linear/nonlinear solvers, IMPES/FI/AIM formulations, well model/control, numerical error, history-match concept and prediction uncertainties. Enhanced oil recovery (EOR): hydrocarbon trapping mechanisms, concepts of miscible/immiscible gas flood, chemical EOR, thermal EOR and EOR screening. Field management: workflow, economics, decision analysis. Reservoir Simulation project. Course programming assignments will use MATLAB and Excel-VBA. Reservoir simulations will use CMG and/or Eclipse.

ERPE 260 - Drilling Engineering (3)

Drilling Engineering is a multidisciplinary subject. The course will cover the fundamentals of drilling engineering to allow students and researchers to appreciate the various interacting subsystems. The class will start by an introduction to drilling systems, rigs, and tools. We will then discuss wellbore hydraulics; drilling problems identification and solutions; well cementing; drilling of directional and horizontal wells; wellbore surveying; pore pressure, fracture gradients; well control; offshore drilling and underbalanced drilling. We will utilize the PAYZONE drilling predictive simulator to corroborate learning.

ERPE 270 - Experimental Methods in Research (3)

Prerequisite: Introductory calculus, physics, chemistry, thermodynamics. (1) The experimentalist: guiding principles and cognitive issues. (2) Theoretical concepts in experimental design: measurement theory. (3) Preliminary design of experiments: statistics, dimensional analysis and models. (4) Devices: cells and instrumentation, boundary conditions, sensing concepts, instruments, transducer, electronics. (5) Conducting the tests. (6) Complimentary analytical and numerical tools: signal processing, regression and inversion. (7) Advanced testing technologies. (8) Reporting and presentation.

Crosslisted as: ME 214.

ERPE 293 - Master's Traveling Scholar

Master's level traveling scholar.

ERPE 294 - Contemporary Topics in ERPE (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

ERPE 295 - Master's Internship (0-12)

Master's level internship.

ERPE 297 - Master's Thesis Research (0-12)

Master's level research leading to a formal written thesis and oral defense.

ERPE 299 - Master's Directed Research (0-12)

Master's level supervised research.

ERPE 310 - Sequence Stratigraphy (3)

Carbonate factories, Characteristics of carbonate sequences and systems tracts, Depositional topography in carbonate systems, Carbonate cyclicity and stratigraphic hierarchies, Milankovitch patterns as seen in carbonate sequence development. The icehouse stratigraphic record of Pleistocene sequences of the Bahamas and learnings for ancient carbonate cycles and sequences. The Cretaceous of the eastern Arabian Plate as a model for Greenhouse carbonates. Seismic imaging issues in carbonates. Carbonate diagenesis within a sequence stratigraphic context. Applications of concepts to reservoir-scale problems in carbonates. Applications of concepts to exploration-scale problems in carbonates. Non-eustatic drivers of carbonate sequences, biotic crises, climatic input.

Prerequisite: ERPE 210.

ERPE 311 - Carbonate Diagenesis (3)

Specialized advanced level course that covers the transition of carbonate sediments to carbonate rocks via diagenetic alterations. Special emphasis will be placed on the creation and destruction of pore space in carbonate rocks and how that impacts key properties impacting pore volume, connectivity and subsurface fluid flow in aquifers and hydrocarbon reservoirs.

Prerequisite: ERPE 210.

ERPE 315 - Energy Geoscience (3)

This course covers the science and practice of petroleum

geology and other terrestrial sources of energy.

ERPE 331 - Subsurface Geomechanics and Field Applications (3)

Rock and geo-mechanical fundamentals and skills in the quantification of present-day in situ stresses and pressures as well as mechanical properties of sub-surface rocks and deformation processes of relevance to petroleum engineering, geothermal developments, as wells CO₂ sequestration and underground storage processes.

ERPE 350 - Thermodynamics of Subsurface Reservoirs (3)

Prerequisite: Introductory calculus, physics, chemistry, thermodynamics. Fundamental laws of thermodynamics and their applications to subsurface reservoirs especially to hydrocarbon reservoirs. Bulk-phase equilibrium thermodynamics with cubic equations of state, in particular, the Peng-Robinson equation of state. Detailed calculation procedures to predict volumetric properties, gas and liquid phase compositions, thermal properties and sonic velocities of reservoir fluids. Algorithms for flash calculation and stability analyses. Interfacial thermodynamics and irreversible thermodynamics with applications to subsurface reservoirs.

ERPE 351 - Modeling Naturally Fractured Reservoirs (3)

Overview of naturally fractured reservoirs (NFR) and modeling methods. (1) Introduction to NFR: definitions, importance, detection methods, characterization. (2) Single porosity model: multiphase flow, matrix-fracture interaction (diffusion, imbibition, infiltration), gridding, limitations. (3) Dual porosity/dual permeability models: derivations, shape factor, transfer functions and limitations. (4) Discrete fractured models; 2D/3D gridding simplifications. (5) Advanced methods; Finite Element FE, Control-Volume FE, Mixed FE. (6) DFN upscaling: static/dynamic upscaling, single-phase/multi-phase upscaling. (7) Class project. Course programming assignments will require MATLAB, Fortran or C/C++.

ERPE 360 - Field Development Planning (3)

Prerequisites: Two ERPE courses. Work flow to develop a hydrocarbon reservoir field development plan. Value chain, work plan setting, project timing and typical duration. Contributions and significance of complementary disciplines (geology, geophysics, petrophysics, reservoir engineering, drilling & concept engineering). Inherent uncertainties in data and models; consequences, impact and engineering under uncertainty.

ERPE 361 - Advanced Well Testing (3)

Oil and gas production rates from a well often undergo a declining behavior over time. Well productivity is a complex process that is a function of the hydrocarbon reservoir subsurface properties related to the fluids in places and the hosting environment. It is also related to the wellbore flow conditions from the reservoir to the surface. Well testing is an important technology that is frequently used in the industry. This technology consists of flow diagnostics (rates and pressure) to evaluate a well productivity or injectivity performance such as skin factor, non-Darcy effect, and storativity. It is also used to acquire insights about the reservoir properties such as connectivity, heterogeneity including fractures, flow regime, and drainage area. This course covers the fundamentals of well testing and discusses real field applications. The course includes : 1) fundamentals of flow in porous media; 2) introduction to decline-curve analysis; 3) Buildup-test analysis of slightly compressible fluids; 4) Analysis of oil and gas well flow and buildups tests; 5) Well-test in hydraulically fractured wells; 6) Well-test in naturally fractured reservoirs; 7) Interference and pulse testing; 8) well testing in unconventional reservoirs. Note: students are expected to have at least basic familiarity with: Multi-phase flow in porous media, reservoir engineering, and programming in Matlab or Python.

ERPE 362 - Enhanced Oil Recovery (3)

This course provides an integrated workflow for field development and production life-cycle, including secondary recovery evaluation, reservoir screening for tertiary recovery, and assessing various EOR schemes. We discuss, in detail, the concept of miscible gas flooding (CO₂-EOR), chemical EOR, and thermal recovery. We cover the fundamentals of EOR-related flow mechanisms such as, trapping mechanisms, sweep and displacement efficiency, mobility ratio, interfacial tension, capillary number, miscible gas thermodynamics (vaporization, condensation, swelling), cross-phase diffusion, phase behavior of microemulsions, non-Newtonian flow behavior of polymers, inaccessible pore-volume, steam flood, and others. We also discuss the limitations of various EOR methods such as CO₂ capture, compression, and transportation, optimum switching window, evaluation methods including pilot design, tracers, economic assessment, and decision analysis. Study of field cases and reservoir simulations will also be addressed.

Prerequisite: ERPE 250.

ERPE 393 - Doctoral Traveling Scholar

Doctoral level traveling scholar.

ERPE 394 - Contemporary Topics in ERPE (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

ERPE 395 - Doctoral Internship (0-12)

Doctoral level internship.

ERPE 397 - Doctoral Dissertation Research (0-12)

Doctoral level research leading to a formal written dissertation and oral defense.

ERPE 398 - Graduate Seminar (0)

Graduate seminar focusing on special topics within the field.

Crosslisted as: ErSE 398 and ERPE 398.

ERPE 399 - Doctoral Directed Research (0-12)

Doctoral level supervised research.

ErSE - Earth Science and Engineering

ErSE 199 - Directed Study in Earth Science (0)

A course of self-study in a particular topic as directed by faculty and approved by the division.

ErSE 201 - Geophysical Fluid Dynamics I (3)

Prerequisite: Basic knowledge of general principles of fluid dynamics and thermodynamics. Introductory description of the Earth's climate system, governing equations of mass and momentum conservation, equation of state, thermodynamic equation, wave kinematics, dispersion, group velocity, sound waves, gravity waves, effect of rotation, equations of motion in spherical coordinates, primitive equations, Boussinesq approximation, changing vertical coordinate, asymptotic analysis and scaling, geostrophic balance, thermal wind, static instability, boundary layers in atmosphere and ocean.

ErSE 202 - Computational Groundwater Hydrology (3)

Prerequisite: Basic programming skill in MATLAB or consent of instructor. Derivation of mathematical models for porous media flow. Development and application of mass conservative simulator models of single phase, miscible fluids in porous media. Solution of the pressure equation. Numerical methods for convection diffusion equations. The course covers derivation of mathematical

models for porous media flow, and the development and application of mass-conservative simulator models of single phase, miscible fluids in porous media. Solutions of the pressure equation, and numerical methods for convection and diffusion equations are presented as well.

Prerequisite: Approval by course instructor.

ErSE 210 - Seismology (3)

Learn fundamental concepts of seismology and their applications both in a global and exploration setting. The course covers the derivation of the acoustic and elastic wave equation, basic concepts of rock physics and fluid substitution and their connection to seismic wave propagation, ray theory, surface waves and normal modes, earthquake sources, and basic principles of refraction and reflection seismology.

Prerequisite: Approval by course instructor.

ErSE 211 - Global Geophysics (3)

Prerequisite: Basic knowledge of fluid/elastic processes in continuous media or consent of instructor. The course provides introductory descriptions of the Earth solid and fluid natural systems and their interaction. It discusses Earth early geological history, plate motions, magnetism and sea floor spreading, earthquakes and earth structure, gravity, geochronology, heat flow, mantle convection and earth's magnetic field; history of earth climate, formation of oceans and atmosphere, biological history, energy balance climate model, general circulation of ocean and atmosphere, climate change, coupled ocean-atmosphere-biosphere climate models. The course introduces descriptions of solid and fluid Earth systems and their interaction, and is divided in two (2) parts. Part I covers the history of Earth climate, formation of oceans and atmosphere, biological history, energy balance in climate model, general circulation of ocean and atmosphere, climate change, and coupled ocean-atmosphere-biosphere climate models. Part II discusses Earth early geological history, plate motions, sea floor spreading, earthquakes and Earth structure, gravity, geochronology, heat flow, mantle convection and Earth's magnetic field.

Prerequisite: Approval by course instructor.

ErSE 212 - Geophysical Geodesy and Geodynamics (3)

Satellite geodesy, gravimetry, GPS, Interferometric Synthetic Aperture Radar (InSAR), radar altimetry. Plate tectonics and paleomagnetism, plate motions, plate-boundary deformation, seismic cycle, heat flow, basin subsidence, plate-flexure, post-glacial rebound, geoid determination, gravity anomalies, sea-level measurements,

tides, earth rotational variations, volcano geodesy. This course provides an introduction to commonly used geodetic methods in geophysics, such as triangulation, leveling, borehole strain monitoring, GPS, Interferometric Synthetic Aperture Radar (InSAR), radar altimetry, optical image correlation and gravimetry. Several applications of these methods are discussed, e.g. for studying plate motions, plate-boundary deformation, seismic cycle processes, basin subsidence, plate-flexure, post-glacial rebound, geoid variations, gravity anomalies, sea-level changes, tides, earth rotational variations, and volcanic processes.

ErSE 213 - Inverse Problems (3)

Prerequisite: Linear algebra, multivariable calculus, probability theory, MATLAB programming. This course will introduce the principles of Inverse theory and data assimilation with applications to geophysics and other sciences. Both deterministic and stochastic viewpoints will be covered. Subjects studied will include topics such as least squares, generalized inverses, regularization, Kalman filter, adjoint method, etc. Techniques for solving nonlinear inverse and data assimilation problems will be also covered (200- level for Master students, 300-level for Ph.D. students with more home- and project work).

ErSE 214 - Seismic Exploration (3)

An introductory course on Seismic exploration covering the basics of seismic waves, seismic data, seismic acquisition, data processing, filters, seismic velocities, and stacking. The course includes an introduction to seismic imaging.

ErSE 215 - Geomechanics I (3)

Concepts of linear elastic fracture mechanics as applied to the classification, origin and evolution of all types of rock fractures; continuum theory in rock mechanics; rock strength and failure criteria; rock mechanics testing; stress tensors; elastic theory; poroelasticity and thermoelasticity; inelastic behaviour; stress regimes; geological applications.

ErSE 217 - Structural Geology (3)

Background topics for Structural Geology, such as stress and strain, vectors and tensors, rheology, brittle and ductile deformation, fractures, fault mechanics, friction, Mohr's circles, stable and unstable sliding, and faulting styles. Structural descriptions of joints, veins, intrusives, folding, linear and planar structures, and foliation, cleavage, and transposition. Large scale analysis of convergent, extensional and transform strike-slip systems, mountain building, and plate tectonics.

Prerequisite: To have completed or be enrolled at least one ErSE or ERPE course at KAUST.

ErSE 218 - Geophysical Field Methods (3)

Theory and practice of seismic refraction, gravity, electromagnetic, and resistivity surveys will be presented. Lectures will cover both geophysical theory and field method procedures, accompanied by either a geophysical field exercise or data processing lab. The final grade is based on homework grades, a project report and the related presentation. Field projects cover applications in environmental engineering, exploration, and earthquake hazards. Instruments to be used include the 64-node Syscal multi-node resistivity system, the Geonics EM-34 frequency domain loop antennae system, the Geonics microgravimeter, and the Geometrics 624-channel seismic recording system. Commercial codes will be used for processing the data.

Prerequisite: ErSE 201 or ErSE 214.

ErSE 219 - Field Geology (3)

A main component to understand the geology of a region requires in situ studying of the geology in the field at rock outcrops. Field geology, including the determination of rock units, the measurements of faults and planes and sampling of relevant samples together with e.g. remote sensing techniques is the basis of many geological studies. In this course the students will learn these field geology techniques by a combination of field excursions, a mapping exercise in a selected area in teams as well as preparation of the mapping before, and the analyses and interpretation of the field data to a full geological report after the field work. This course teaches modern field geological methods, including:

- The recognition of geologic features and different rock types in the field.
- Determination of rock units measurement and description of stratigraphic sections.
- Surface geological mapping using satellite images and digital elevation models at various scales.
- Structural interpretation and construction of cross sections.
- Comparative dating techniques in the field to determine timing.
- Field mapping techniques incl. orientation in the field, interpolation of data, GPS usage.
- Field sampling techniques.
- Integrated mapping, geological interpretation of an area and presentation of this in written and spoken form.

Prerequisite: To have completed or be enrolled at least one ErSE or ERPE course at KAUST.

ErSE 221 - Magmatic Systems (3)

The course discusses magmatic processes in the Earth and the rocks formed by them from different perspectives.

Magmatism in the geological framework: Understanding how melts are formed and how they are related to solid earth plate tectonic processes. We will cover all major geodynamic settings in which magmatism occurs and see how different processes result in different geochemical rock compositions. Additionally, we will evaluate different volcano types that form by different magmatic processes, their eruptive products and their associated volcanic hazards.

Different petrological and geochemical techniques: Petrography of igneous rocks (hand specimen, thin sections), igneous geochemistry (major elements, trace elements, volatile), fluid and melt inclusion analytics.

The course will consist of a series of lectures and practical work in the form of rock descriptions, microscope work and geochemical exercises

ErSE 222 - Machine Learning in Geoscience (3)

Learn fundamental concepts of machine learning and their applications in geoscience. The course presents the theoretical foundations and practical applications of linear regression, logistic regression, deep neural networks, convolutional neural networks (CNN), dimensionality reduction, recurrent neural networks, and generative networks. Each method is accompanied with Python exercises, most of which are applied to geophysical data.

ErSE 223 - Geological Systems of Arabia (3)

This course uses the Arabian plate to illustrate major geological processes such as plate tectonics, continental accretion, exhumation, and fragmentation, the development of sedimentary basins, plate margin and intraplate magmatism and the formation of hydrocarbon and mineral deposits. The course consists of lectures by the instructors and student presentations on individual research topics relevant to better understanding the geology of the Arabian plate. The following are the main topics:

- Neoproterozoic tectonics and continental accretion of the Arabian-Nubian shield.
- Base and precious metal mineralization in the Arabian shield.
- Phanerozoic stratigraphy and hydrocarbon habitat along the Arabian Tethyan margin.
- Collisional tectonics along the Oman and Zagros mountain belts.
- Cenozoic tectonics and evolution of the Red Sea from a

continental rift to an ocean basin.

- Cenozoic stratigraphy, structure, and hydrocarbon habitat of the Red Sea.
- Salt tectonics and reef development in the Red Sea.
- Cenozoic volcanism in the Afar and Harrat lava fields.
- Strike-slip tectonics along the Dead Sea fault.
- Crustal structure of the Arabian Peninsula and the Red Sea.
- Climate change and geological CO₂ sequestration in Arabia.
- The potential for high and low enthalpy geothermal energy in Arabia.

Prerequisite: To have completed or be enrolled at least one ErSE or ERPE course at KAUST.

ErSE 225 - Physical Field Methods in Geophysics I (3)

Measurement and theory of gravity and magnetic fields of the earth; small to large- scale gravity and magnetic anomalies in exploration and global geophysics; reduction of gravity and magnetic data and forward modelling; applications to exploration, tectonics, and environmental problems. Thermal properties, temperatures, and heat transfer within the context of global geological and geophysical processes, such as plate tectonics and sedimentary basin evolution.

Prerequisite: AMCS 231, ErSE 211 or Approval by course instructor.

ErSE 226 - Marine Geology – The Oceanic Crust (3)

The course aims to give the students a comprehensive overview of the geology of the oceanic crust. It shall cover the principles of ocean crust formation, how the crust matures and how it is eventually altered by volcanic activity, sedimentation and fluid flow. It will inform about the formation of marine mineral deposits (in particular the massive sulfides but also manganese nodules and crusts) and fundamentals of deep-sea exploration and research. After the course the students

- have a good overview of the current state of deep-sea research and know how the ocean crust is formed and matures
- have knowledge about the geology and petrology of the oceanic crust
- are informed about marine mineral deposits formation as well as aspects of deep-sea mining (incl. environmental impacts etc)
- be able to interpret data from deep-sea exploration as e.g. maps and water column data and have a basic understanding of the methods used for exploration and sampling of the deep ocean

This course will be a series of lectures that give the

theoretical background paired with real-world examples from recent, seagoing expeditions. The course will encourage discussion and active participation and the students will carry out several interpretation tasks (e.g. from hydroacoustic data or petrological aspects) in a series of assignments.

ErSE 253 - Data Analysis in Geosciences (3)

Prerequisite: Background in linear algebra, probability theory, statistics; programming in MATLAB. Time series (filtering, correlation, deconvolution, spectral analysis, regression), processing of multidimensional data, spatial statistics including variogram, covariance analysis and modelling, multipoint estimation, spatial interpolation including statistical methods (kriging) and dynamical methods (Kalman filter), uncertainty assessment, cross validation, multivariate analysis including principal component analysis and canonical analysis.

ErSE 260 - Seismic Imaging (3)

Seismic migration methods are developed. Green's theorem is used to derive the Lippmann-Schwinger equation and the following migration methods: phase-shift migration, split-step and PSPI migrations, Fourier Finite Difference migration, phase-encoded multi-source migration, Kirchhoff migration, beam migration, diffraction stack migration, reverse time migration, and migration velocity analysis. This course is devoted to studying the concept of seismic imaging for exploration purposes. We introduce seismic imaging in the framework of Green's functions and wavefield extrapolation and discuss the various imaging conditions. We look at the various migration methods including Kirchhoff, phase-shift migration, Downward continuation methods, reverse time migration, and others. We discuss the role that velocity plays in the seismic imaging process.

ErSE 293 - Master's Traveling Scholar

Master's level traveling scholar.

ErSE 294 - Contemporary Topics in Earth Science (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

ErSE 295 - Master's Internship (0-12)

Master's level internship.

ErSE 297 - Master's Thesis Research (0-12)

Master's level research leading to a formal written thesis

and oral defense.

ErSE 299 - Master's Directed Research (0-12)

Master's level supervised research.

ErSE 301 - Geophysical Fluid Dynamics II (3)

Climate and climate change, large-scale atmospheric and oceanic motions, fine-scale processes, shallow water equations, conservation properties of shallow water equations, geostrophic adjustment, vorticity and circulation, circulation theorems, potential vorticity conservation, quasi-geostrophic equations, energetics of quasi-geostrophic equations, Rossby waves, barotropic and baroclinic instabilities.

Prerequisite: ErSE 201 or Approval by course instructor.

ErSE 303 - Numerical Methods of Geophysics (3)

Prerequisite: Basic knowledge of fluid/elastic processes in continuous media. Built on the modeling and simulation foundation developed in ErSE203, this specialized course will discuss advanced ideas of multi-scale modeling, linear and non-linear finite element methods, and investigate modern approaches to numerical simulations of hydrodynamic and geophysical turbulence, problems of theoretical glaciology and material science of ice for the prediction of ice sheet evolution, and wave propagation in linear and non-linear media.

ErSE 304 - Geophysical Continuum Mechanics (3)

The course provides physical background foundation and overview of mathematical continuum models of geophysics. The goal of the course is to allow students to learn modelling ideas and utilize them in simulation. Topics discussed include: brief introduction to Cartesian tensors, their calculus and algebra; deformations and strain measures; balance laws and equations of motion; thermodynamical relations and constraints; mixture theory and phase change.

Prerequisite: AMCS 231 or Approval by course instructor.

ErSE 305 - Multiphase Flows in Porous Media (3)

Thermodynamics of pressure, volume, temperature and composition relationships in water, oil or nonaqueous phase liquids and gas mixtures. Modeling compositional and thermal fluids, including streamline flow, fractional flow and both immiscible and miscible flow. This course covers the thermodynamics of pressure, volume, temperature and composition relationships in water, oil or non-aqueous phase liquids and gas mixtures. In addition, modelling compositional and thermal fluids, including

streamline flow, fractional flow and both immiscible and miscible flow will be taught.

Prerequisite: AMCS 206 or AMCS 231 or Approval by course instructor.

ErSE 307 - Atmospheric Chemistry and Transport (3)

The course provides an introduction in atmospheric chemical processes and their role in climate system. It covers fundamentals of reactions kinetics, photochemical processes, chemistry of troposphere and stratosphere, tropospheric ozone and air-pollution, stratospheric ozone and ozone hole, atmospheric aerosols, chemistry of clouds, atmospheric transport, chemistry transport models, chemistry climate models.

Prerequisite: ErSE 201 or Approval by course instructor.

ErSE 308 - Atmospheric Physics (3)

The course discusses main physical processes in the Earth's atmosphere and their role in the formation of weather and climate including atmospheric dynamics and general circulation, sub-grid fine-scale processes and their parameterizations, atmospheric convection, cloud and precipitation formation, atmospheric turbulence and the planetary boundary layer, air-sea interaction, energy balance, radiative-convective equilibrium, general circulation models, coupled ocean-atmosphere models.

Prerequisite: ErSE 201, AMCS 252 or Approval by course instructor.

ErSE 309 - Thermodynamics of Subsurface Reservoirs (3)

This course covers the fundamental laws of thermodynamics and their applications to subsurface reservoirs especially to hydrocarbon reservoirs. Bulk phase equilibrium thermodynamics is a focus of this course, which prepares students the required thermodynamic skill for compositional petroleum reservoir simulation. Cubic equations of state and their strengths are discussed for pure components and mixtures. In particular, Peng-Robinson equation of state and its modeling parameters are addressed. Detailed calculation procedures are given to predict volumetric properties, gas and liquid phase compositions, thermal properties and sonic velocities of reservoir fluids. Algorithms on flash calculation and stability analysis are considered. We study bisection and successive substitution techniques based on the Rachford-Rice equation as well as Newton's method. Optional advanced topics in this course include 1) statistical thermodynamics and molecular simulation for phase behaviors of fluids, 2) nonequilibrium and irreversible

thermodynamics, especially as applied to reservoir grading, and 3) interfacial thermodynamics and its application to micro-pores and nano-particles for oil reservoirs.

ErSE 315 - Geomechanics II (3)

Application of Geomechanics I to reservoir characterization; borehole imaging and borehole stresses; borehole failure analysis; pore pressure prediction and effective stress concepts; sand production and sand failure modelling; effects of water on sand production; wellbore stability; drilling practice.

Prerequisite: ErSE 215 or Approval by course instructor.

ErSE 323 - Igneous Geochemistry (3)

This igneous geochemistry course will teach how to use techniques in geochemistry on a more advanced level to study magmatic processes such as melting & magma chamber processes, volcanic eruptions and hydrothermal circulation in various tectonic settings on Earth. This course consists of several theoretical lectures, but is mostly a hands-on course in which students will work with their own and/or literature geochemical data in various exercises.

In more detail:

A) Lectures on different geochemical data, including major and trace elements, radiogenic isotopes, stable isotopes, noble gasses, dating techniques and mineral chemistry, as well as on analytical techniques, data processing, online data repositories and magmatic modelling software.

B) Exercise on critical reading of geochemical publications, including a short presentation.

C) Exercise on the processing of raw geochemical data: the correction and visualisation of data, including a short report.

D) Modelling of geochemical data using programs as e.g. COMAGMAT, MELTS, PETROLOG and PRIMELT.

E) Short project in which students collect literature and/or database geochemical data from an area of their choice, quality evaluation of those data, and use those data together with geochemical modelling to draw conclusions of self-designed questions, as well as to define follow up questions. The result will be presented in a talk and a written report.

Prerequisite: ErSE 221.

ErSE 325 - Physical Fields Methods in Geophysics I (3)

Prerequisite: PDEs and course in basic EM physics. General concepts of electromagnetic field behavior. Electromagnetic properties of rocks. Direct current methods, natural- field electromagnetic methods, magnetotelluric field, numerical modelling, magnetotelluric survey methods. Controlled source electromagnetic methods, electromagnetic sounding and profiling. Computer simulation and interpretation of electromagnetic geophysical data.

ERSE 326 - Computational Geophysics (3)

An introduction to finite-difference, pseudo-spectral, finite-element, and spectral-element methods will be presented and applied to basic geophysical problems including heat flow and wave propagation. The course offers hands-on lab experience in numerically solving partial differential equations relevant to geophysics.

ErSE 327 - Multiscale Modeling of Geological Reservoirs (3)

The course covers a number of basic multiscale methods with applications in geological reservoirs. Individual topics include: basic multiscale methods; homogenization techniques; heterogeneous multiscale methods; multiscale finite element methods; permeability upscaling single-phase and multiphase flows at multiple scales in geological reservoirs; multiscale multicomponent transport simulation; pore-scale modeling of reservoirs; molecular dynamics simulation of reservoir fluids.

ErSE 328 - Advanced Seismic Inversion (3)

Prerequisite: Include courses in linear algebra and partial differential equations. Knowledge of linear inversion and exploration seismology is helpful. Consent of instructor is required. Overview of non-linear seismic inversion methods that invert for earth parameters from seismic data. The inversion procedure is a multiscale iterative method (typically, non-linear conjugate gradient) that employs preconditioning and regularization. Solution sensitivity is analyzed by model covariance matrices, the slice-projection theorem, and the generalized Radon transform. Methods for waveform inversion, wave path traveltime tomography, and least squares migration are presented.

Corequisite: ErSE 260.

ErSE 330 - Pore-Scale Modeling of Subsurface Flow (3)

This course will lay out the tools and fundamentals essential to carry out modeling, computation, analysis of flow at a pore scale. In particular, numerical techniques

used to solving Stokes and Navier-Stokes within the framework of staggered-grid finite-difference methods will be introduced. The student will learn the basic principle of multiphase flow at a pore scale as well as its numerical modeling. Pore-scale flow and transport in geological formation and its applications to oil industry problems will be emphasized.

ErSE 331 - Interferometric Synthetic Aperture Radar (InSAR) in Earth Sciences (3)

Fundamentals of radar imaging, synthetic aperture radar (SAR), interferometric synthetic aperture radar (InSAR), InSAR decorrelation, differential InSAR, unwrapping, InSAR error analysis, atmospheric signals, ionospheric disturbances, time-series derivation and analysis, Small-baseline subset (SBAS) InSAR, persistent scatterer InSAR, SAR image offsets, multiple-aperture interferometry, crustal deformation mapping, InSAR applications, future InSAR missions.

Prerequisite: ErSE 253.

ErSE 353 - Data Assimilation (3)

Data assimilation (DA) is the process of optimally combining observations with the predictions of numerical models to make the best possible estimate of the time-varying state of the phenomenon under study. In particular, DA forms a basis for the forecast of the future and re-analysis of the past. In the last 20 years, DA has gained center stage in many computational disciplines at both universities and research centers starting with geoscience applications. DA is a subject that requires a balanced understanding of statistics and applied mathematics as well as the relevant geophysical systems. This course introduces the concepts of data assimilation derived in the context of the statistical estimation theory and the deterministic inverse theory. The course covers a variety of assimilation methods for numerical weather prediction, ocean forecasting, reservoir history matching, 4D seismic inversion, and hydrology assimilation. These include, but not limited to, optimal interpolation and three (3) dimensional variational (3D VAR) methods, Kalman filtering, smoothing and fourdimensional variational (4D VAR) methods, low rank Kalman filtering, ensemble Kalman filtering and ensemble square-root filters. Advanced topics based on the fully nonlinear Bayesian estimation theory, such as the particle filter and the Gaussian Mixture filters, and the state of art data assimilation systems will also be discussed.

Prerequisite: ErSE 253.

ErSE 360 - Mathematical Methods for Seismic Imaging (3)

This course will be devoted to mathematical algorithms and methods for seismic imaging. We will learn how to extrapolate wavefields efficiently and accurately. Distribution, sampling and representation theorems are among the mathematical concepts covered in the course. We will also look at scattering and inverse scattering theory and relate them to the imaging process. To simplify the understanding of these concepts, we will look at them as well under the high frequency asymptotic assumption as we focus on solutions to the eikonal and dynamic ray tracing problems.

Prerequisite: ErSE 260.

ErSE 393 - Doctoral Traveling Scholar

Doctoral level traveling scholar.

ErSE 394 - Contemporary Topics in Earth Science (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

ErSE 395 - Doctoral Internship (0-12)

Doctoral level internship.

ErSE 397 - Doctoral Dissertation Research (0-12)

Doctoral level research leading to a formal written dissertation and oral defense.

ErSE 398 - Graduate Seminar (0)

Graduate seminar focusing on special topics within the field.

Crosslisted as: ErSE 398 and ERPE 398.

ErSE 399 - Doctoral Directed Research (0-12)

Doctoral level supervised research.

ESL - English as a Second Language**ESL 101 - English as a Second Language I (0)**

ESL 101 is a foundational English skills course for reading, listening, speaking and writing. The course has a strong focus on teaching students the basics of academic writing and grammar structures in preparation for thesis work. Course materials are typically A2 level to help students acquire basic academic English skills required for

graduate coursework.

ESL 102 - English as a Second Language II (0)

ESL 102 is a pre- English skills course for reading, listening, speaking and writing. The course continues to focus on building academic writing and grammar skills and also have more emphasis on reading for academic purposes. Course materials are typically B1 level to help students further develop pre-intermediate English skills required for graduate coursework.

ESL 103 - English as a Second Language III (0)

ESL 103 is an upper-intermediate English skills course for reading, listening, speaking and writing. The course helps to further develop academic English skills necessary to successfully complete research and thesis work. Course materials are typically B2 level to help students refine upper- intermediate English skills required for graduate coursework.

IED - Innovation and Economic Development**IED 210 - Technology Innovation and Entrepreneurship (3)**

This course introduces students to using an entrepreneurial and design thinking view to solving real-world challenges including the pathway to commercializing research. It is about changing methods of thinking and equipping graduate students to be able to understand and manage innovation in the corporate world.

Crosslisted as: IED 220.

IED 220 - New Venture Development and Leadership (6)

This intensive 8 week module will give a small select group of students, the opportunity and time to develop a detailed value proposition for a product based on an existing piece of intellectual property. This technology may be from the KAUST IP portfolio or potentially from a corporate partner. As part of the program, students will be provided with an overview of key creative subjects related to new product development including; key aspects of intra/entrepreneurship, innovation management including new product development, Go-to-Market strategies as part of commercialization roadmaps, as well as general knowledge on relevant creativity and design thinking. It will also enable students to develop these skills in a full-time, heavily mentor-led and experiential learning environment that includes regular pitches and feedback

from a wide range of pre-selected mentors from both inside and outside KAUST including international experts.

Crosslisted as: IED 210.

IED 230 - Product Development and Corporate Innovation (6)

Through a mentor-led experiential program, this course will enable students to learn-by-doing leading to the development of a fully functioning MVP (Minimally Viable Product). Students will learn the following key aspects of Product Development: Identifying a real problem: empathy with users, interview techniques, distinguishing between a “want” and a “real need”. Designing a product that will solve a real problem: Architecture, system design, building submodules, unit test, system integration, system test, testing “fit for use”, productize, manufacture. Project planning, managing & tracking: Learn about Gantt charts, Scrum, Kanban, Scrumban etc. and select the right tool for the project Roles & responsibilities in a product development organization: Product Owner, Developers, SQA (Testers), Manufacturing, QC, Documentation, Customer Support Integrating continuous feedback from different constituencies: prospective users, mentors, teaching team, classmates etc. Iterative development mindset: Leverage lean development techniques to “fail fast” and “fail frequently” to deliver fit-for-use products faster. Skills: Develop a number of ‘soft’ skills such as leadership, team development, conflict resolution, stakeholder management, and project management.

IED 300 - Entrepreneurship for All (0)

Entrepreneurship for All (E4A) is designed for students to explore their entrepreneurial leadership potential, stimulate their creativity and explore entrepreneurial opportunities in their future career. Whether you want to pursue an academic career, work for a large company, join the government sector or create a new venture, this course will give you a critical foundation to develop the leadership and innovation skills necessary to pursue any career path. Though an immersive experiential learning journey, you will work with teams to unlock the unknown and experiment with the latest innovation tools. You will expand your network and meet well-accomplished technology leaders with different career trajectories. This experience will help you to explore your potential and start planning for it.

MarS - Marine Science

MarS 199 - Directed Study in Marine Science (0)

A course of self-study in a particular topic as directed by

faculty and approved by the division.

MarS 221 - Marine Life (3)

Prerequisite: Undergraduate course in ecology, zoology, or marine science. Students from programs other than MarS must have instructor permission to register for this course. An overview of marine biology that surveys the diversity of marine habitats, major groups of taxa inhabiting those habitats and the general biology of the various taxa. Topics include the impacts of climate change and other anthropogenic impacts in the ocean. Species diversity, structure of marine food webs and the flow of energy within different marine habitats will be detailed and contrasted. The course will cover the major marine ecosystem types and the ecology of the adaptations of marine life occupying these habitats. There will be a particular emphasis on Red Sea systems.

MarS 228 - Marine Ecosystems (3)

Structure and Function of marine ecosystems - This course gives an overview of marine ecology. It addresses the global production and distribution of plankton and fish, the vertical distribution of both pelagic and benthic organisms as well as predator-prey interactions among organisms in different habitats. It describes ecosystems from the intertidal zone to the deep sea and outlines ecological principles governing the distributions of organisms and their adaptations to be successful in the different environments. Marine Life (MarS 221) is a prerequisite for this course.

Prerequisite: MarS 221.

MarS 293 - Master's Traveling Scholar

Master's level traveling scholar.

MarS 294 - Contemporary Topics in Marine Science (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

MarS 295 - Master's Internship (0-12)

Master's level internship.

MarS 297 - Master's Thesis Research (0-12)

Master's level research leading to a formal written dissertation and oral defense.

MarS 299 - Master's Directed Research (0-12)

Master's level supervised research.

MarS 319 - Movement Ecology (3)

This course will focus on several aspects of movement ecology in the marine environment. The topics will span a range of spatial and temporal scales, ranging from feeding mechanics and daily home ranges to ocean-scale migrations and evolutionary connectivity. Particular emphasis will be given to the Red Sea, where possible. An emphasis will be placed on concepts with case studies to investigate in further detail.

MarS 323 - Pelagic Ecology (3)

Prerequisite: Undergraduate course in marine science. Students from programs other than MarS must have instructor permission to register for this course. The course will address one or a few central topics in pelagic ecology in-depth. It will primarily be based on seminars in which the students will present and discuss scientific papers. The aims are to acquire knowledge of the state-of-the-art of current research questions, as well as to train communication skills and the ability to critically read research papers. Assessment includes a final oral exam.

MarS 326 - Coral Reef Ecology (3)

This course will cover coral reef distributions, biogeography, and ecological processes important to reefs. Basic coral anatomy and physiology will be discussed. Reef fishes and their interaction with coral communities will be highlighted, along with coral reef fisheries. Modern threats to coral reefs, including thermal bleaching, ocean acidification and diseases of corals will be examined with particular emphasis on processes affecting the future status of reef communities. As a Ph.D. level course, assessment of students and participation expectations will be commensurate with the level of student experience.

Prerequisite: MarS 221 (Please note: prerequisites are for M.Sc. students only) or Approval by course instructor.

MarS 329 - Marine Microbial Ecology (3)

In the light of the recent developments in the field of marine microbial ecology the course will give an overview on structure and function of microbial communities in the oceans including discussions on novel methods, results and hypotheses. Among the topics covered are: Photoheterotrophic bacteria, Marine Bacteria and the Carbon Cycle, UV radiation effects on Microbes and Microbial Processes, Uptake and Regeneration of Inorganic Nutrients by Marine Heterotrophic Bacteria, Bacterivory: Interactions between Bacteria and their Grazers, Symbiosis and Mixotrophy Among Pelagic Microorganisms, Marine Viruses and their ecological

impact, Global Ocean Survey of Marine Metagenomics, Single cell activity in marine bacterioplankton. Marine extreme environments and microbial extremophiles; Major marine extreme environments (e.g. Mangroves, Deep sea anoxic brine pools; hydrothermal vents); Microbial adaptation to extremes (salinity, thermal adaptation, etc); archaea; metabolic diversity and networks; Element cycles in extreme ecosystems; Sediment microbiomes; The diversity and mechanisms of symbiotic interactions between marine hosts and microbes; As a Ph.D. level course, assessment of students and participation expectations will be commensurate with the level of student experience.

Prerequisite: EnSE 203 (Please note: prerequisites are for M.Sc. students only) or Approval by course instructor.

MarS 330 - Marine Ecological Genomics (3)

Ecological genomics describes the application of genomic tools (high throughput sequencing, microarrays, quantitative PCR etc.) to solve questions of ecology. Its purpose is to increase understanding of the responses and interactions of organisms to the environment and to one another by analyzing genomic sequences, gene expressions and genome evolution. This course will give an overview over the methods utilized and the questions asked by ecological genomics with a particular emphasis on marine ecological genomics. As a Ph.D. level course, assessment of students and participation expectations will be commensurate with the level of student experience.

MarS 332 - Optical Oceanography (3)

This course in ocean optics is intended to be a practical introduction to the theory and use of ocean optics. Ocean optics spans the areas of radiative transfer within seawater, the role of particles and dissolved organic matter in modifying the inherent optical properties and the use of remotely sensed ocean color to measure biogeochemical properties and processes within the ocean. The course will include theory of inherent and apparent optical properties, the use of modeling tools to propagate light within seawater and the practical use of in situ instrumentation to make measurements of inherent and apparent optical properties within the ocean.

MarS 335 - Oceanography (3)

This course is an introduction to oceanography that focuses on the interaction between organisms and their physical environment. The course includes discussions of ocean basins, major currents and water property distributions; properties of seawater: equation of state, temperature and salinity analysis; basic dynamical ideas: hydrostatic

balance, Coriolis force, geostrophy, turbulence; forcing of the ocean: solar radiation, winds, heat and freshwater fluxes; Ekman transport; the observed ocean: major currents, gyres, meridional overturning, eddies, sill flows, upwelling, monsoons, equatorial motions, El Niño, marginal seas; time dependence: inertial oscillations, long gravity waves, Rossby waves; tides: astronomical forcing, basin modes, local resonances, tidal mixing. The course includes a practical portion focusing on oceanographic measurements and will include a small field effort. Analysis and reporting of the results from this effort is a requirement of the course.

MarS 393 - Doctoral Traveling Scholar

Doctoral level traveling scholar.

MarS 394 - Contemporary Topics in Marine Science (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

MarS 395 - Doctoral Internship (0-12)

Doctoral level internship.

MarS 397 - Doctoral Dissertation Research (0-12)

Doctoral level research leading to a formal written dissertation and oral defense.

MarS 398 - Graduate Seminar (0)

Graduate seminar focusing on special topics within the field.

MarS 399 - Doctoral Directed Research (0-12)

Doctoral level supervised research.

ME - Mechanical Engineering

ME 100 - Basic Principles of Mechanics (0)

Solid Mechanics: Equilibrium conditions and determination of forces on structures, Determination of internal force systems in structures, Definitions of stress and strain, Mechanical properties of solid materials, Structural components under axial loads, torsional loads, bending, and combined loads, beam theory. Fluid Mechanics: Fluid properties, fluid forces, fluid statics and kinematics, Conservation of mass, momentum and energy in fixed, deforming, and moving control volumes, boundary layer concept, lift and drag, pressure and friction drag, streamlining and drag reduction. Dynamics and Vibrations: Kinematics of particles, Kinetics of a particles,

Work and energy methods for particles, Vibrations of particles, Planar kinematics of rigid bodies, Planar kinetics of rigid bodies, Work and energy methods for rigid bodies, Vibrations of rigid bodies

ME 101 - Basic Principles of Thermodynamics (0)

Pressure, temperature and general properties, work and heat transfer in processes, power, conservation principle for mass and energy, reversible processes, the 2nd law of thermodynamics, steady state devices, transient processes, heat engines, power producing cycles, refrigerator and heat pumps, basic constrained optimization based on Lagrange multipliers (needed for chemical equilibrium), basic differentiation skills and understanding of homogeneous functions (for mathematical thermodynamics).

ME 199 - Directed Study in Mechanical Engineering (0)

A course of self-study in a particular topic as directed by faculty and approved by the division.

ME 200A - Incompressible Flows (3)

Continuum hypothesis. Basics of vector calculus. Eulerian and Lagrangian description of the flow. Decomposition of motion. Conservation of mass, momentum, and energy. Constitutive equations for Newtonian fluids. Navier Stokes equations. Dimensional analysis and Pi theorem. Exact solution for unidirectional flows. Other exact solutions of laminar flows. Stokes flows and lubrication theory. Vorticity dynamics. Kelvin's circulation theorem. Geostrophic flows. Velocity potential and potential flows. D'Alembert's paradox and Blasius drags laws. Conformal mapping.

ME 200B - Viscous and Unsteady Flows (3)

Viscous creeping flow; viscous boundary layers; review of thermodynamics; general equations of motion; buoyancy-driven flows; rotating flows; introduction to stability and turbulence; quasi one-dimensional compressible flow; shock waves; unsteady compressible flow; acoustics.

Prerequisite: ME 200A.

ME 211A - Mechanics of Structures and Solids (3)

Review of basic concepts of continuum mechanics. Statics: static stress analysis, stress tensors. eigenvalues and principal stresses, equilibrium, concept of static admissibility, Airy functions. Kinematics: transformations. expansion and deformation tensors, transport equations, linearization for small perturbations. Linear elasticity. Strong form solutions. Energy theorems and approximations: theorems of potential and complementary energy, Ritz approximations, weak form

and variational formulations. Introduction to fracture, damage and plasticity.

ME 211B - Homogenization and Upscaling Techniques in Solid Mechanics (3)

A variety of special topics will be discussed in the second term such as, but not limited to: homogenization strategies (Voigt, Reuss, Hill Mandel, asymptotic, concepts of representative volume element), isotropic and anisotropic damage theory, micromechanics of cracking in laminated media and micromechanics based damage models, identification of parameters of models of materials by Digital Image Correlation.

Prerequisite: ME 211A.

ME 212 - Continuum Mechanics (3)

Elements of Cartesian tensors. Configurations and motions of a body. Kinematics—study of deformations, rotations and stretches, polar decomposition. Lagrangian and Eulerian strain velocity and spin tensor fields. Irrotational motions, rigid motions. Kinetics—balance laws. Linear and angular momentum, force, traction stress. Cauchy's theorem, properties of Cauchy's stress. Equations of motion, equilibrium equations. Power theorem, nominal (Piola- Kirchoff) stress. Thermodynamics of bodies. Internal energy, heat flux, heat supply. Laws of thermodynamics, notions of entropy, absolute temperature. Entropy inequality (Clausius- Duhem). Examples of special classes of constitutive laws for materials without memory. Objective rates, corotational, convected rates. Principles of materials frame indifference. Examples: the isotropic Navier-Stokes fluid, the isotropic thermoelastic solid. Basics of finite differences, finite elements, boundary integral methods and their applications to continuum mechanics problems illustrating a variety of classes of constitutive laws.

ME 214 - Experimental Methods (3)

Lectures on experiment design and implementation. Measurement methods, transducer fundamentals, instrumentation, optical systems, signal processing, noise theory, analog and digital electronic fundamentals, with data acquisition and processing systems.

Prerequisite: ME 200A, ME 200B or ME 211A, ME 211B. Crosslisted as: ERPE 270.

ME 221A - Linear Control Systems (3)

Prerequisite: Calculus ordinary differential equations, exposure to linear algebra and complex variables. This course presents fundamental topics for the analysis of

linear dynamical systems, i.e., systems that evolve in time and which admit an underlying linear structure. The material in this course serves as the foundation for continued study in more advanced courses in control design and system theory. The course covers the following topics: state space equations, interconnections, linearization, solutions of state space equations, Transfer functions, Stability of linear systems, Lyapunov, input/output stability, Controllability and observability, state feedback, observer and an introduction to linear quadratic regulator (LQR).

Crosslisted as: EE 271A and ME 221A.

ME 221B - Non Linear Control Systems (3)

Prerequisite: Linear algebra, differential equations. The aim of this course is to introduce the student to the area of nonlinear control systems with a focus on systems' analysis and control design. The course will include the introduction of nonlinear phenomena including multiple equilibria, limit cycles and bifurcations, Lyapunov and input output stability, examples of control design such as feedback linearization, backstepping control and sliding mode control. Many examples will be provided and designed controllers will be illustrated by simulation using Matlab and through experimental implementation in the control lab.

Prerequisite: ME 221A. Crosslisted as: EE 271B and ME 221B.

ME 222A - Mechatronics and Microsystems (3)

Introduction to Mechatronics principles, MEMS and Microsystems, Data Acquisition, Operational Amplifiers, Microcontrollers and Microprocessors, Signal Processing, FFT, Vibrating MEMS, Gyroscopes, Accelerometers, Band-Pass Filters, Sensing and Actuation, Electro thermal, Piezoelectri, Electromagnetic, Peizo resistive, Electrostatic, Elements of Lumped- Parameter Modeling, Stiffness Elements, Spring-Mass Models, Damping in MEMS, Introduction to Nonlinear Modeling, Fixed Points and Linearization, Bifurcations of Fixed Points, Phase Portraits, Nonlinear Oscillations, Case Studies: Capacitive RF Switches, AFM, Torsional Actuators and Micromirrors.

Crosslisted as: EE 272A and ME 222A.

ME 222B - Mechatronics and Intelligent Systems (3)

Introduction to Mechatronics principles, MEMS and Microsystems, Data Acquisition, Operational Amplifiers, Microcontrollers and Microprocessors, Signal Processing, FFT, Vibrating MEMS, Gyroscopes, Accelerometers, Band-Pass Filters, Sensing and Actuation, Electro thermal,

Piezoelectric, Electromagnetic, Piezoresistive, Electrostatic, Elements of Lumped-Parameter Modeling, Stiffness Elements, Spring-Mass Models, Damping in MEMS, Introduction to Nonlinear Modeling, Fixed Points and Linearization, Bifurcations of Fixed Points, Phase Portraits, Nonlinear Oscillations, Case Studies: Capacitive RF Switches, AFM, Torsional Actuators and Micromirrors. Basic electronic devices, embedded microprocessor systems and control, power transfer components and mechanism design. Hardware-in-the-loop simulation and rapid prototyping of real-time closed-loop computer control of electromechanical systems; robotic manipulation.

Prerequisite: ME 222A. Crosslisted as: EE 272B and ME 222B.

ME 226 - Cyber-Physical Systems (3)

This course introduces the tools and models that will allow attendees to develop high confidence in the resulting system's proper operation prior to any operational test. Included are tools for model-based systems engineering, and cyber-physical system verification and validation currently in use by the CPS industry. Numerous examples will be considered, from aerospace, automotive, medical devices etc. The frequent presence of human operators is also acknowledged and discussed in-depth. Various verification and validation formalisms (formal methods) are described and applied to simple examples.

Crosslisted as: ECE 263.

ME 232 - Advanced Dynamics (3)

The course discusses fundamentals of linear dynamics, kinetics and kinematics, of particles and rigid bodies; both in 2-D and 3-D. 3-D rotation is emphasized. Lagrangian, Newtonian, and Euler dynamics are discussed as applied to variety of rigid body problems. Hamiltonian principles are also discussed. Topics include -Review of Kinetics and Kinematics of Particles, And Planar Rigid Bodies, 3D Rotation, Angular Velocity, Time Derivative of a Vector - Five-Term Acceleration Equation, Coriolis Acceleration, Phase Portrait, Virtual Work, D'Alembert Principle, Lagrange Equations of Particles, Conservative Forces, Linearization, Free Vibration, Hamiltonian's Principle, Lagrange Equations of Rigid Bodies, Cyclic Variables, Hamiltonian, Lagrange Multiplier, Hamilton Canonical Equations, Ruth Equations, Moment of Inertia, Principals Directions, Euler Angles, Euler Equations.

ME 241 - Classical Thermodynamics (3)

Fundamentals of classical thermodynamics. Basic

postulates, thermodynamic potentials, thermophysical properties of pure substances and mixtures, phase transitions, ideal and non-ideal behavior, conversion devices, exergy analysis, power systems, chemical reactions and equilibrium.

ME 242 - Theoretical and Numerical Heat Transfer (3)

The course is focused on advanced concepts of heat transfer with particular emphasis on numerical tools for solving practical heat transfer problems. Topics covered: 1-D and 2-D steady-state conduction, 0-D and 1-D transient conduction, conservation equations, boundary layer concepts, energy and momentum transfer in laminar and turbulent flows, external and internal forced convection, natural convection, heat exchangers, thermal radiation, transport properties and mass diffusion.

ME 243 - Statistical Thermodynamics (3)

The course is focused on connecting classical thermodynamics with the underlying statistical thermodynamic concepts. The emphasis will be on application to substances in the gas phase. Topics covered: kinetic description of dilute gases, equilibrium kinetic theory, classical statistics of independent particles, quantum mechanics fundamentals, Schrodinger equation, partition functions, quantum statistics, thermodynamic properties of ideal gases and real substances.

Prerequisite: ME 241.

ME 244 - Combustion Fundamentals (3)

Basic principles including chemical equilibrium, Arrhenius law, and Rankine-Hugoniot relations will be first discussed. Principles of mass diffusion will be discussed and simplified models discussed. The course will then introduce principles of chemical kinetics, and discuss some important chemical mechanisms including the H₂-O₂ system, and the Zeldovich mechanism for NO formation. Multi-component conservation equations with chemical reaction will be introduced. Various characteristics of premixed and diffusion flames will be studied which covers flame structure, flame stability, flame stabilization, flammability limit, quenching distance and thermal explosion. Combustion phenomena in gas turbines, gasoline engines, diesel engines and power plants will be discussed.

Prerequisite: ME 241.

ME 252 - Fundamentals of Circular Carbon Strategies (3)

Awareness of the global warming problem, implications,

strategies and regulations. Presentation of the 4R strategies: Reduce the amount of CO₂ released in the atmosphere, Reuse CO₂ as such, Recycle CO₂ into new products, and Remove CO₂ from the atmosphere. Physical principles, exergy analysis, challenges, and examples will be discussed.

Prerequisite: ME 250. Corequisite: AMCS 201, AMCS 202.

ME 253 - Sustainable Thermal Technologies (3)

Fundamental grasp of sustainable thermal technologies, including solar, geothermal, waste heat and their integration and hybridization. Thermodynamic and system level analyses for each technology and ways to maximize efficiency and utilization. Systems' integration, hybridization and techno-economics to evaluate the resource, its conversion efficiency and its use as an alternative to traditional sources.

ME 254 - Renewable Fluid Power (3)

Fundamental grasp of renewable fluid power technologies, including wind, wave, hydro and tidal. Principles of fluid mechanics for each technology and ways to maximize efficiency and utilization. System level analyses to evaluate the resource, its conversion efficiency and its use as an alternative to traditional sources.

ME 256 - Electrochemical Energy Systems (3)

Introduction to renewable energy storage and hydrogen as an energy carrier. Basic electrochemistry, kinetics and thermodynamics. Fundamentals of fuel cell and battery. Materials and devices in hydrogen delivery and storage. Basics of reaction mechanisms and routes of electrochemical CO₂ - valuable conversion. Recent advances of catalysts, electrodes, electrolytes and reactors in electrochemical CO₂ reduction.

ME 261 - Applications of Atmospheric Pressure Plasmas (3)

Introduction to plasma sources in atmospheric pressure condition: dielectric barrier discharge, pulsed corona, arc, elongated arc and microwave plasma. Application fields for mechanical engineers. Energy: fuel reforming and combustion. Environment: after-treatment of hazardous gases. Manufacturing: surface treatment of materials. Plasma devices for bio-medical application.

ME 293 - Master's Traveling Scholar

Master's level traveling scholar.

ME 294 - Contemporary Topics in Mechanical Engineering (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

ME 295 - Master's Internship (0-12)

Master's level internship.

ME 297 - Master's Thesis Research (0-12)

Master's level research leading to a formal written thesis and oral defense.

ME 299 - Master's Directed Research (0-12)

Master's level supervised research.

ME 302 - Multi-Phase Flows (3)

Selected topics in engineering two-phase flows with emphasis on practical problems in modern hydro-systems. Fundamental fluid mechanics and heat, mass and energy transport in multiphase flows. Liquid/vapor/gas (LVG) flows, nucleation, bubble dynamics, cavitating and boiling flows, models of LVG flows; instabilities, dynamics and wave propagation; fluid/structure interactions. Discussion of two-phase flow problems in conventional, nuclear and geothermal power plants, marine hydrofoils, and other hydraulic systems.

Prerequisite: ME 200A.

ME 304 - Experimental Methods in Fluid Mechanics (3)

Basic sampling theory. Spectral decomposition, aliasing, Nyquist criterion and dynamic range. Basic optics, lasers, diffraction limit. Particle tracking and streak photography. Point measurements of velocity, pitot static tube, hot wires, and laser-doppler velocimetry. Measurements of velocity fields in planes and volumes, using particle image velocimetry. Micro-PIV. Measurement of scalar fields. Holographic PIV. High-speed video technology. This course has a significant laboratory component.

Prerequisite: ME 200A.

ME 305A - Computational Fluid Dynamics (3)

This is the first course in the year-long set of courses in computational fluid dynamics. Building blocks of CFD: elliptic, parabolic and linear wave equations. Explicit vs. implicit time stepping methods. Various methods to solve the linear and nonlinear wave equation gradually building

up to the Euler equations for compressible flow. Von Neumann linear stability of the developed methods. Riemann solvers in the context of Godunov-like methods. The course involves many hands-on programming assignments and a course code project.

Prerequisite: ME 200A, ME 200B, AMCS 201, AMCS 202.

ME 305B - Advanced Computational Fluid Dynamics (3)

This is an advanced course on Computational Fluid Dynamics (CFD). Multidimensional hyperbolic conservation laws with emphasis on the Colella unsplit method for Euler equations. Higher order shock capturing schemes such as WENO. High-order compact finite difference schemes will be covered, and differences between high-resolution and high-order accuracy, dissipation vs. dispersion. Hybrid method such as the hybrid WENO-compact scheme. Pseudo-spectrum for stability analysis. Projection methods to solve the incompressible Navier-Stokes equations. Multigrid theory for the pressure Poisson equation. Advanced topics such as adaptive mesh refinement, fully implicit Newton-Krylov methods, preconditioning and parallel computing on modern supercomputing platforms.

Prerequisite: ME 305A.

ME 306 - Hydrodynamic Stability (3)

Concept of stability of fluid flows. Two types of stability analysis: normal modes method and treating the stability problem as an initial value problem. Linearizing the governing equations. Several instabilities examined in detail: Rayleigh-Taylor, Jeans instability, Rayleigh-Benard convection, Kelvin-Helmholtz instability, Richtmyer-Meshkov instability. Derivation of stability criteria. Parallel shear flows along with derivations of Rayleigh and Orr-Sommerfeld equations and discussion of algebraic growth. Numerical techniques for computationally determining stability including the novel use of numerical inverse Laplace Transforms. Introductory global stability analysis.

Prerequisite: ME 200A, ME 200B. Corequisite: AMCS 201, AMCS 202.

ME 307 - Turbulence (3)

Introduction to turbulence. Fundamental equations of turbulent flow. Statistical description of turbulence. Experimental methods for turbulence. Reynolds equations. Kolmogorov's theory. Scales of turbulence. Homogeneous turbulence. Free-shear flows. Bounded

flows. Boundary layers. Simulating turbulent flows. Reynolds Average Navier-Stokes approach. Introduction to Large Eddy.

Prerequisite: ME 200A, ME 200B, AMCS 201, AMCS 202.

ME 317 - Mechanics of Composite Materials and Structures (3)

Introduction and fabrication technologies. Elastic response of composite materials (especially fiber and particulate reinforced materials) from the fabrication to the in-service structure. Up scaling strategies from the microstructure to the single ply: kinematic and static bounds, asymptotic expansion and periodical homogenization. Up scaling strategies from the single ply to the structural scale: elastic deformation of multidirectional laminates (lamination theory, ABD matrix). Mechanics of degradation in composite materials: fiber-matrix debonding, plasticity, micro cracking and induced delamination. Tools for description of non-linear effects: damage mechanics for laminates, applications of fracture mechanics. Aging and fatigue. Basic criteria-based theories will also be reviewed, including first ply failure, splitting and delamination. Basic experimental illustration will include: hand lay up of a simple laminate, characterization using full field measurement of its material properties.

Prerequisite: ME 211A, ME 212.

ME 319 - Computational Solid Mechanics (3)

Variational principles in linear elasticity. Finite element analysis. Error estimation. Convergence. Singularities. Adaptive strategies. Constrained problems. Mixed methods. Stability and convergence. Variational problems in nonlinear elasticity. Consistent linearization. The Newton-Raphson method. Bifurcation analysis. Adaptive strategies in nonlinear elasticity. Constrained finite deformation problems. Contact and friction. Time integration. Algorithm analysis. Accuracy, stability, and convergence. Operator splitting and product formulas. Coupled problems. Impact and friction. Space-time methods. Inelastic solids. Constitutive updates. Stability and convergence. Consistent linearization. Applications to finite deformation viscoplasticity, viscoelasticity and Lagrangian modeling of solids.

Prerequisite: AMCS201, AMCS202.

ME 320 - Nonlinear Systems (3)

Phase portraits, Phase diagrams, Fixed points and linearization, Stability theories, Autonomous and non autonomous systems, method of multiple scales, primary

and secondary resonances, parametric and auto-parametric resonances, self excited systems, Floquet theory, bifurcations, shooting technique, Poincare section, introduction to quasi-periodic solutions, Chaos, classifications, identification methods, routes to chaos, the escape from a potential well phenomenon, tangling.

Prerequisite: AMCS 202.

ME 326 - Robust Control (3)

Linear systems, realization theory, time and frequency response, norms and performance, stochastic noise models, robust stability and performance, linear fractional transformations, structured uncertainty, optimal control, model reduction, m analysis and synthesis, real parametric uncertainty, Kharitonov's theorem and uncertainty modeling.

Prerequisite: AMCS 201, AMCS 202, ME 221A, ME 221B. Crosslisted as: EE 376 and ME 326.

ME 340 - Advanced Combustion Theory (3)

Review of chemical thermodynamics and kinetics. Conservation equations of multi-component reacting flows. Transport properties. Asymptotic analysis of premixed flames. Flame speed and extinction. Theory of laminar premixed and nonpremixed flames. Aerodynamics of premixed flames. Computational simulations of premixed and nonpremixed flames. Theory of ignition and extinction.

Prerequisite: ME 244.

ME 342 - Chemical Kinetics (3)

Non-equilibrium processes in chemically reacting gases. Example applications to combustion, atmospheric chemistry, plasmas, chemical and materials processing, rocket nozzles and gaseous lasers. Bimolecular reaction theory (collision theory); transition state theory; unimolecular and association reactions; complex reactions; straight chain reactions; explosions and branched chain reactions; photochemistry, photophysics; atmospheric chemistry, vibrational relaxation; experimental techniques.

Prerequisite: ME 244 or ME 241.

ME 346 - Turbulent Combustion (3)

Governing equations of reactive fluid flow. Review of fundamental concepts in turbulence. Non-premixed turbulent combustion. Conserved scalar modeling approach and turbulent non-premixed combustion models. Premixed turbulent combustion fundamentals and

combustion regimes. Canonical models for premixed turbulent combustion. Partially premixed combustion. Scaling laws for lifted turbulent jet flames.

Prerequisite: ME 244, ME 307.

ME 348 - Introduction to Spectroscopy and Laser Diagnostics (3)

Introduction to Spectroscopy and Laser Diagnostics Fundamentals of microwave, infrared, Raman, and electronic spectroscopy. Laser-based diagnostic techniques for measurements of species concentration, temperature, pressure, velocity, and other flow field properties. Topics: rotational, vibrational, and electronic transition frequencies; spectral line shapes and line-broadening mechanisms; nuclear spin effects; electronic spectra of atoms and molecules; absorption; emission; laser induced fluorescence (LIF); Rayleigh and Raman scattering; Mie scattering; applications of laser diagnostics and case studies.

Prerequisite: ME 241 or ME 243.

ME 376 - Introduction to Combustion Engines (3)

The objective of the course is to provide a thorough understanding of the processes that occur in an internal combustion engine and the reason why it is designed as it is. The course will after an introduction deal with the performance measures of ICE, the link between engine performance and vehicle requirements, fundamental combustion, thermodynamic cycles, multicylinder balance, in-cylinder flow and turbulence, Spark Ignition Combustion, Spark Ignition engine emissions, the combustion in Compression Ignition engines and it's after treatment needs. The course ends with a rather comprehensive description of the gas exchange system with valve system, gas dynamics in inlet and exhaust systems, two-strokes and finally supercharging/turbocharging.

Prerequisite: ME 241 or ME 244.

ME 377 - Advanced Internal Combustion Engines (3)

The course seeks to explain advanced aspects of modern engines. Engine balance, in-cylinder flow, and advanced gas exchange systems are discussed, as well as downsizing and hybridization considerations. Detailed consideration of emissions is given. Lubrication is addressed and fuel aspects are presented with respect to decarbonization of transport and the importance of the CFR engine. Alternative engine types now being developed are presented, such as the Wankel rotary and 2-stroke engines. Case studies are given to provide context to

topics being studied.

Prerequisite: ME 376.

ME 378 - Experimental Combustion (3)

Experimental methods for combustion study will be instructed. Widely studied canonical flames and burners, which include a coflow burner, a counterflow burner, jet flames and outwardly propagating flames will be introduced and detailed experimental conditions to control various flame characteristics, such as flame temperature and burning velocity, will be instructed. Practical diagnostic methods such as laser induced fluorescence and particle image velocimetry will be covered. Complementary experiments will be provided for practical knowledge and experience.

Prerequisite: ME 244.

ME 393 - Doctoral Traveling Scholar

Doctoral level traveling scholar.

ME 394 - Contemporary Topics in Mechanical Engineering (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

ME 395 - Doctoral Internship (0-12)

Doctoral level internship.

ME 397 - Doctoral Dissertation Research (0-12)

Doctoral level research leading to a formal written dissertation and oral defense.

ME 398 - Graduate Seminar (0)

Graduate seminar focusing on special topics within the field.

ME 399 - Doctoral Directed Research (0-12)

Doctoral level supervised research.

MSE - Material Science and Engineering

MSE 100 - Basic Principles of Physics (0)

This course is a review of physics content normally taught at the senior undergraduate level. The course will cover electric field and potential, DC and AC current circuits,

magnetism, magnetic induction, electromagnetic waves and optical phenomena (transmission, reflection, diffraction, interference, etc.). Further topics will include Blackbody radiation, photoelectric effect, atomic line spectra, Bohr hydrogen atom, de Broglie waves, Heisenberg Uncertainty Principle, free particle, particle in a box, particle on a ring, simple harmonic oscillation, quantum numbers and angular momentum. Finally, an overview of the first, second, and third laws of Thermodynamics along with heat capacity, enthalpy, thermal conduction is presented.

MSE 199 - Directed Study in Materials Science (0)

A course of self-study in a particular topic as directed by faculty and approved by the division.

MSE 200 - Mathematics for Material Science and Engineering (3)

The course presents advanced mathematical methods for material engineers, including Laplace and Fourier transforms, matrix formalism, ordinary and partial differential equations, and statistics and probability. The students will be introduced to the MATLAB software.

MSE 201 - Fundamentals of Materials Science and Engineering (3)

This course is intended for students who do not have a materials science and engineering background. The course will cover four major topics including: fundamental concepts, microstructure development and phase equilibria, material properties and fabrication methods and applications. The course will cover atomic structure, atomic bonding, crystal structures, defects and diffusion in materials. It also will cover phase transformations and phase equilibria and how they impact microstructure development. The electrical, magnetic, optical, thermal and mechanical properties of materials will also be reviewed. The course will also highlight modern fabrication technologies and applications of metals, ceramics, semiconductors, and polymers.

MSE 221 - Crystallography and Diffraction (3)

Prerequisite: college-level knowledge of physics and math. In this course, the basic concepts needed to understand the crystal structure of materials are presented. Fundamental notions including lattices, symmetries, point groups, and space groups will be discussed and the relationship between crystal symmetries and physical properties will be addressed. The theory of X-ray diffraction by crystalline matter along with some experimental X-ray methods used to determine the crystal structure of materials will be covered. Further to this, the use of neutrons and electrons

in diffraction analysis will be introduced.

MSE 225 - Electronic Properties of Materials (3)

Prerequisite: Basic knowledge of quantum mechanics, electromagnetism and solid state physics. The objective of this course is to cover the fundamental concepts of structural, electrical and optical properties needed to understand the behavior of the materials including conductors, semiconductors and dielectrics. The course will provide an overview of the electronic properties of materials with emphasis on fundamental physical models that describe the crystal structure, chemical bonding, energy band structure of solids, charge carrier transport in metals, semiconductors, metal-semiconductor junctions and semiconductor-semiconductor junctions. After attending the course the students should be able to understand the origin of electrical properties of materials and their relation to the operating principles of key devices used in modern day electronics.

MSE 226 - Thermodynamics of Materials (3)

This course provides an overview of the fundamental concepts in thermodynamics and their application in Materials Science. The following topics will be covered: review of the laws of classical thermodynamics, thermodynamic processes and cycles (Carnot and others), ideal and real gases, basics of statistical thermodynamics, solution theory and mixtures of gases and liquids, phase equilibria in single-component, binary, and ternary systems, chemical equilibria, surface and interface thermodynamics, chemical kinetics, and kinetic gas theory.

MSE 227 - Applied Quantum Mechanics (3)

This course is a general introduction to non-relativistic quantum mechanics, focusing on topics relevant for materials scientists. Topics include: Summary of classical mechanics and electrodynamics. Postulates of quantum mechanics, wave functions, operator formalism and Dirac notation. Stationary-state problems, including quantum wells, tunneling and density-of-states calculations. Harmonic oscillator. Free particle, wave packet, and scattering states. Central potentials and hydrogen atom. Atoms and periodic table.

MSE 228 - Materials Characterization (3)

This course will introduce the basic principles of materials characterization and the common characterization techniques available at KAUST. It will cover the following topics: Diffraction methods: basic principles, interaction of radiation and particle beams with matter, XRD, scattering techniques; Spectroscopic methods; Imaging: optical including confocal microscopy, scanning, transmission

electron, scanning tunneling and field ion microscopy; Microanalysis and Tomography: energy dispersive, wavelength dispersive, Auger Processes, Electron, Ion and Atom Probe Tomography, SIMS, photoelectron spectroscopy; thermal analysis: DTA, DSC. Lab visits and demonstrations will be scheduled to the class to discuss some case studies.

MSE 229 - Polymeric Materials (3)

This course describes polymerization processes; polymer solutions (Flory-Huggins model and application to polymer blends); polymer chain conformations; calculation of end-to-end distribution function $W(r)$ for short range interacting chains; rotational isomeric state scheme and temperature dependence; chain with long range interactions (excluded volume effect); radius of gyration; the crystalline and amorphous states of polymers; the glass transition (configurational entropy model); mechanical, electrical and optical properties and characterization of polymers.

MSE 293 - Master's Traveling Scholar

Master's level traveling scholar.

MSE 294 - Contemporary Topics in Materials Science (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

MSE 295 - Master's Internship (0-12)

Master's level internship.

MSE 297 - Master's Thesis Research (0-12)

Master's level research leading to a formal written thesis and oral defense.

MSE 299 - Master's Directed Research (0-12)

Master's level supervised research.

MSE 310 - Energy Storage Materials and Devices (3)

This course covers energy storage technologies from the perspective of material scientists. It provides an overview of the energy storage field, including electrochemical, chemical, thermal, and mechanical storage, with emphasis materials innovations required to meet the performance metrics for various applications. Relevant fundamental concepts of material science and electrochemistry are first discussed. The Li-ion battery system is then studied in detail, including anodes, cathodes, electrolytes, separators,

charge storage mechanisms, performance metrics, and testing protocols. This is followed by discussing other battery technologies, including mobile ion batteries, metal anode batteries, aqueous batteries, metal-air, metal-sulfur, and redox flow batteries. Electrochemical capacitors are then studied, covering their design, electrode materials, charge storage mechanisms, and emerging applications. In the latter part of the course, chemical storage (e.g., H₂ storage) and thermal storage technologies are studied.

MSE 314 - Ab-Initio Computational Methods (3)

Introduction into the theory and application of materials modeling techniques. Comparison of analytical and numerical methods. Introduction into basic numerical algorithms. Fundamentals of density functional theory. Band structure approaches for crystalline solids. Introduction into commercial and freeware computer packages. Advanced applications of ab-initio computational techniques.

Prerequisite: MSE 227.

MSE 318 - Nanomaterials (3)

This course describes the most recent advances in the synthesis, fabrication and characterization of nanomaterials. Topics to be covered: Zero-dimensional nanomaterials, including nanoparticles, quantum dots and nanocrystals; one dimensional materials including nanowires and nanotubes; two (2)-dimensional materials: including self-assembled monolayers, patterned surfaces and quantum well; three (3)-dimensional nanomaterials: including Nano porosity, nanocomposites, block copolymers and supra-crystals. Emphasis on the fundamental surface and size-related physical and chemical properties of nanomaterials; and their applications in bio sensing, nanomedicine, catalysis, photonics and Nano electronics.

MSE 320 - Materials and Devices for Energy Conversion (3)

This course will focus on energy conversion materials from the perspective of material scientists. It will involve an overview of energy, energy conversion methods including thermoelectrics, photovoltaics, triboelectrics and electrochemical with a focus on the history, state-of-the-art materials and devices and disruptive technologies. Introduction to energy, conservation of energy, law of thermodynamics are covered. The semiconductors for such applications are covered in each section i.e. for photovoltaics, thermoelectrics and piezoelectrics, fuel cells. Then the mechanisms of such devices, p-n junction, device architectures, electrodes, performance metrics and

characterization methods are covered.

MSE 322 - Semiconductor Materials (3)

The course covers advance understanding of the physics of band formation based on nature of atoms and crystal structure, including electronic properties of advanced semiconductor materials other than conventional semiconductor, such as Si and GaAs. The physics of carrier dynamics and optical properties of 1- dimensional, 2-dimensional compared to bulk 3-dimensional material structures, including material engineering through alloy system and dopants through quantum mechanics. The effect of defects and impurities on modulating electronic and optical material properties based on their atomic nature. The materials that will be covered include elemental semiconductors, alloy semiconductors, and wide-band gap semiconductors. Special classes of semiconductor properties of amorphous (non-crystalline effect), alloys (potential fluctuation effect) and nanostructures (quantum confinement effect) will be discussed. Understanding the physical background of different characterization techniques will be introduce.”

MSE 324 - Photophysics of Organic Semiconductors (3)

This course offers an introduction to electronic processes in conjugated organic materials nowadays used in many different optoelectronic devices such as lightemitting diodes and organic solar cells. The theoretical basics of electronic transitions and excited states (excitons) are discussed first, followed by an overview of basic measurement (spectroscopy) techniques. Furthermore, emission spectra of single molecules,ensembles, and aggregates are reviewed and basic concepts of energy transfer and photoexcitations in conjugated polymers are introduced. Finally, the course offers an overview of technological applications of semiconducting organic materials and an introduction to advanced (time-resolved) spectroscopy and data analysis techniques.

MSE 325 - Fundamentals of Carbon Science and Engineering (3)

Recommended Prerequisite: MSE 201 or MSE 318.

The Fundamentals of Carbon Science and Engineering course has been designed and developed to assist interested members of the KAUST academic community to understand the breadth of different types of Carbon Materials and their applications.

The content of the course is at the Intermediate / Advanced MSE level as it assumes the student already knows concepts that are fundamental to MSE. These include

notions of crystallography, characterization methods, electronic properties, composites, nanomaterials, etc.

The topics studied are key to the field and the subject is approached from multiple angles, from the state-of-the-art research reports to the present and past tendencies of global markets. Furthermore, an historical scientific perspective is given by looking at seminal papers dating back to the early 20th century.

Depending on availability, Guest Lecturers will present first-hand testimonies of forefront research or provide industrial updates.

The course is Lecture-based meaning there will be no lab work. At most, and if time permits, a field trip or a lab demonstration may take place.

Prerequisite: MSE 221.

MSE 393 - Doctoral Traveling Scholar (3)

Doctoral level traveling scholar.

MSE 394 - Contemporary Topics in Materials Science (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

MSE 395 - Doctoral Internship (0-12)

Doctoral level internship.

MSE 397 - Doctoral Dissertation Research (0-12)

Doctoral level research leading to a formal written dissertation and oral defense.

MSE 398 - Graduate Seminar (0)

Graduate seminar focusing on special topics within the field.

Crosslisted as: AP 398 and MSE 398.

MSE 399 - Doctoral Directed Research (0-12)

Doctoral level supervised research.

PS - Plant Science

PS 199 - Directed Study in Plant Science (0)

A course of self-study in a particular topic as directed by faculty and approved by the division.

PS 201 - Concepts of Developmental Biology and Genetics (3)

The course provides a basic understanding of important developmental processes. It explains core developmental mechanisms, including pattern formation, cell determination, differentiation and specification of tissue types. The course will illustrate the mode of action of developmental control genes, in particular those encoding transcription factors, cell-cell communication molecules and signal transduction components. The course will cover different aspects and mechanisms in developmental biology and compares them between different model organisms. In addition to lectures, computer cases and literature presentations complementary to each topic will be implemented to provide "hands-on" insight into the topics of interest, recent sophisticated techniques for developmental analysis will be introduced and observations on real samples will be performed.

PS 202 - Plant Physiology and Adaptation (3)

The aim of this course is to provide an overview of plant structure and function, covering a range of plant processes such as water and nutrient transport and the central plant operation of photosynthesis and C metabolism. The course will end with an introduction to the interactions of plants with their environment, studying responses to challenges from both the biotic and abiotic world.

PS 293 - Master's Traveling Scholar

Master's level traveling scholar.

PS 294 - Contemporary Topics in Plant Science (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

PS 295 - Master's Internship (0-12)

Master's level internship.

PS 297 - Master's Thesis Research (0-12)

Master's level research leading to a formal written thesis and oral defense.

PS 299 - Master's Directed Research (0-12)

Master's level supervised research.

PS 301 - Advanced Plant Growth & Development (3)

The course will include latest methods to analyze genes involved in and regulating plant growth and development,

in particular, latest developments in the control of cell cycle and cell expansion at the cellular, tissue and organismic level. Furthermore, the role of hormones and environmental factors on the development of roots, leaves and flowers will be discussed in a seminar style.

PS 302 - Biochemistry and Metabolic Engineering (3)

The course will provide an overview on cell metabolism and biochemical pathways, covering primary, lipid and isoprenoid metabolism. This will be followed by an introduction of the concept of Metabolic Engineering, highlighting key factors that regulate natural and synthetic pathways. Examples for engineered pathways will be presented and discussed in depth. The course also includes practical introduction in metabolite analysis.

PS 303 - Advanced Plant Molecular Genetics (3)

This course will cover the key biological processes of plants in a molecular, genetics and genomics context. The course will provide a broad coverage of the current concepts and techniques of plant molecular genetics and genomics and their application to crop productivity and improvement. Special emphasis will be placed on recent publications in the research of these topics involving plant growth and development, abiotic/biotic stresses, metabolism, hormones, nutrient relations and epigenetics.

PS 393 - Doctoral Traveling Scholar

Doctoral level traveling scholar.

PS 394 - Contemporary Topics in Plant Science

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

PS 395 - Doctoral Internship (0-12)

Doctoral level internship.

PS 397 - Doctoral Dissertation Research (0-12)

Doctoral level research leading to a formal written dissertation and oral defense.

PS 398 - Graduate Seminar (0)

Graduate seminar focusing on special topics within the field.

PS 399 - Doctoral Directed Research (0-12)

Doctoral level supervised research.

STAT - Statistics

STAT 199 - Directed Study in Statistics (0)

A course of self-study in a particular topic as directed by faculty and approved by the division.

STAT 210 - Applied Statistics and Data Analysis (3)

(Equivalent to AMCS 110) Prerequisites: Advanced and multivariate calculus. For students outside STAT wishing to obtain an introduction to statistical method. No degree credits for STAT or AMCS majors. Provides fundamentals of probability and statistics for data analysis in research. Topics include data collection, exploratory data analysis, random variables, common discrete and continuous distributions, sampling distributions, estimation, confidence intervals, hypothesis tests, linear regression, analysis of variance, two-way tables and data analysis using statistical software.

STAT 215 - Applied Statistics with R (3)

This course is an introduction to practical applied statistics with R, a programming language and software environment for statistical computing, and with RStudio, an integrated development environment for R. Topics include introduction to R, data and programming, summarizing data, probability and statistics in R, simple and multiple linear regression, categorical predictors and interactions, model diagnostics, collinearity, variable selection and model building, selected data analyses.

Prerequisite: Approval by course instructor. Corequisite: STAT 220, STAT 230, STAT 250.

STAT 220 - Probability and Statistics (3)

Prerequisites: Advanced and multivariable calculus, linear algebra. This course is an introduction to probability and statistic for students in statistics, applied mathematics, electrical and computer engineering and computer science. This core course is intended to provide a solid general background in probability and statistics that will form the basis of more advanced courses in statistics. Content: Probability; Random variables; Expectation; Inequalities; Convergence of random variables. Statistical inference: Models, statistical inference and learning; Estimating the CDF and statistical functionals; The bootstrap; Parametric inference; Hypothesis testing and p-values; Bayesian inference; Statistical decision theory. Statistical models and methods: Multivariate models; Inference about independence.

STAT 230 - Linear Models (3)

Prerequisites: Advanced and multivariable calculus, linear algebra. This course is an introduction to the formulation and use of the general linear model, including parameter estimation, inference and the use of such models in a variety of settings. Emphasis will be split between understanding the theoretical formulation of the models and the ability to apply the models to answer scientific questions.

STAT 240 - Bayesian Statistics (3)

This course will provide an introduction to the theory and methods of Bayesian statistics. In Bayesian statistics, one's inference about parameters and hypotheses are updated, using Bayes rule, as evidence/data accumulates. We will discuss the theory and how to do Bayesian data analysis. Computational aspects will also be discussed, and we will make use of R, JAGS/Stan, to do the inference.

Prerequisite: STAT 220, STAT 230, STAT 250 or Approval by course instructor.

STAT 250 - Stochastic Processes (3)

Prerequisites: Advanced and multivariate calculus, linear algebra. Introduction to probability and random processes. Topics include probability axioms, sigma algebras, random vectors, expectation, probability distributions and densities, Poisson and Wiener processes, stationary processes, autocorrelation, spectral density, effects of filtering, linear least-squares estimation and convergence of random sequences.

STAT 260 - Nonparametric Statistics (3)

This course is an introduction to nonparametric function estimation. Topics include kernels, local polynomials, Fourier series, spline methods, wavelets, automated smoothing methods, cross-validation, large sample distributional properties of estimators, lack-of-fit tests, semiparametric models, recent advances in function estimation.

Prerequisite: STAT 220, STAT 230, STAT 240 and STAT 250 or Approval by course instructor.

STAT 270 - Statistical Design of Experiments (3)

This course is an introduction to the statistical design of experiments and the role of random effects in data analysis. Topics include randomization tests, blocking, Latin squares, split plots, repeated measures and crossover designs, incomplete block designs, lattice designs, two level factorials, experiments without replication, factorials

in incomplete blocks, confounding, fractional factorials, response surface methodology, Bayesian designs, and basics of design of computer experiments.

Prerequisite: STAT 220, STAT 230, and STAT 250 or Approval by course instructor.

STAT 293 - Master's Traveling Scholar

Master's level traveling scholar.

STAT 294 - Contemporary Topics in Statistics (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

STAT 295 - Master's Internship (0-12)

Master's level internship.

STAT 297 - Master's Thesis Research (0-12)

Master's level research leading to a formal written thesis and oral defense.

STAT 299 - Master's Directed Research (0-12)

Master-level supervised research.

STAT 310 - Environmental Statistics (3)

This course is an introduction to statistical methods for environmental data, with a focus on applications. Learn, discuss and apply statistical methods to important problems in environmental sciences. Topics include sampling, capture-recapture methods, regression, toxicology, risk analysis, time series, spatial statistics and environmental extremes.

Prerequisite: STAT 220, STAT 230, STAT 240, STAT 250 (Please note: prerequisites are for M.Sc. students only) or Approval by course instructor.

STAT 320 - Advanced Statistical Inference (3)

The course aims to provide a solid presentation of the main approaches to statistical inference, in particular of those formulations based on the so-called likelihood function, and of the most important statistical methods in current use for data modeling and for the interpretation of the uncertainty inherent in the conclusions from statistical analyses. The course is intended for students in science, engineering and statistics. At the end of the course, the student should be able to select and apply the main statistical procedures to a wide range of practical problems.

Prerequisite: STAT 220, STAT 230, STAT 240, STAT 250

(Please note: prerequisites are for M.Sc. students only) or Approval by course instructor.

STAT 330 - Multivariate Statistics (3)

An introduction to multivariate statistical models, well balancing three equally important elements: the mathematical theory, applications to real data, and computational techniques. Traditional multivariate models and their recent generalizations to tackle regression, data reduction and dimensionality reduction, classification, predictor and classifier instability problems. Tools for analyzing unstructured multivariate data.

Prerequisite: STAT 220, STAT 230, STAT 240, STAT 250 (Please note: prerequisites are for M.Sc. students only) or Approval by course instructor.

STAT 335 - Statistical Dependence Modeling with Copulas (3)

This advanced statistics course is an introduction to the statistical dependence modeling with copulas. Topics covered include: (a) *Fundamentals*: Sklar's Theorem, Basic properties, Some copulas for discrete variables, Measures of association; (b) *Models*: Elliptical copulas, Archimedean copulas, Extreme-Value copulas, Factor copulas, Vine copulas; and (c) *Inference*: Inference based on measures of association, The empirical copula, Likelihood-based inference for parametric copulas. Additional modern special topics will also be discussed.

Prerequisite: STAT 220, STAT 230, STAT 250.

STAT 340 - Computational Statistics (3)

This course discusses computational techniques for statistical inference, including exact recursions for hidden Markov chains, Gaussian Markov random fields and their applications in latent Gaussian models, inference for latent Gaussian models using Markov chain Monte Carlo with block-sampling and auxiliary variables, deterministic approximations using integrated nested Laplace approximations (INLA), and the EM algorithm.

Prerequisite: STAT 220, STAT 230, 240, STAT 250 (Please note: prerequisites are for M.Sc. students only) or Approval by course instructor.

STAT 350 - Time Series Analysis (3)

This course will cover models for analyzing time series data from both time and frequency domain perspectives. The emphases will be a balance of theory and applications. The course is intended to prepare the student for methodological research in this area and to train the

students on cutting-edge data analytic methods for time series. The primary topics include ARMA/ARIMA models; spectral and coherence estimation; transfer function modeling; and classification and discrimination of time series. The course will conclude with advanced topics on non-stationary time series, time-frequency analysis and state-space models.

Prerequisite: STAT 220, STAT 230, STAT 240, STAT 250 (Please note: prerequisites are for M.Sc. students only) or Approval by course instructor.

STAT 355 - Advanced Stochastic Processes and Random Fields (3)

Topics include Gaussian processes; Sample function properties; Correlation and spectral representations; Ergodic theory and mixing; Level crossings and excursions; Gaussian Markov random fields; and applications in areas such as spatial statistics and signal processing.

Prerequisite: STAT 220, STAT 250.

STAT 360 - Functional Data Analysis (3)

This course will be a broad overview of the analysis of data of multiple curves that may be considered to arise from smooth functions. The course is intended to prepare the students for methodological research in this area and to train them on cutting-edge methods for analyzing functional data. The primary topics covered include visualization of curves and data exploration, nonparametric smoothing (including splines and wavelets), functional principal components analysis, mixed effects models and functional mixed effects models.

Prerequisite: STAT 220, STAT 230, STAT 240, STAT 250, STAT 260 (Please note: prerequisites are for M.Sc. students only) or Approval by course instructor.

STAT 370 - Spatial Statistics (3)

Recommended Prerequisite: STAT 320. This course is an introduction to the concepts and applications of spatial statistics. It covers the following topics. Geostatistical data: Random Fields; Variograms; Covariances; Stationarity; Non-stationarity; Kriging; Simulations. Lattice data: Spatial regression; SAR, CAR, QAR, MA models; Geary/Moran indices. Point patterns: Point processes; K-function; Complete spatial randomness; Homogeneous/inhomogeneous processes and Marked point processes.

Prerequisite: STAT 220, STAT 230, STAT 240, STAT 250 (Please note: prerequisites are for M.Sc. students only) or Approval by course instructor.

STAT 380 - Statistics of Extremes (3)

Recommended Prerequisite: STAT 320, 370. This advanced statistics course aims at providing a rather deep understanding of Extreme-Value Theory results, models, and methods, as well as some experience in the practical application of these tools to real data using the statistical software R. Theoretical and practical aspects will be covered. Topics covered include (a) Univariate Extreme-Value Theory: Extremal-Types Theorem; GEV distribution; return levels; Domains of attraction; Threshold-based methods; GPD distribution; Point process representation; r-largest order statistics approach; Likelihood inference; Modelling of non-stationarity; Dependent time series; Clustering and declustering approaches. (b) Multivariate Extreme-Value Theory: Modelling of componentwise maxima; Spectral representation; Parametric models; Dependence measures; Asymptotic dependence/independence; Threshold methods; Likelihood-based inference. (c) Spatial Extremes: Gaussian processes; correlation functions; Max-stable processes and models.

Prerequisite: STAT 220, STAT 230, STAT 240, STAT 250 (Please note: prerequisites are for M.Sc. students only) or Approval by course instructor.

STAT 393 - Doctoral Traveling Scholar

Doctoral level traveling scholar.

STAT 394 - Contemporary Topics in Statistics (3)

A course of current interest. Topics are not permanent and the content of the course will change to reflect recurring themes and topical interest. The content will be approved by the division.

STAT 395 - Doctoral Internship (0-12)

Doctoral level internship.

STAT 397 - Doctoral Dissertation Research (0-12)

Doctoral level research leading to a formal written dissertation and oral defense.

STAT 398 - Graduate Seminar (0)

Graduate seminar focusing on special topics within the field.

Crosslisted as: AMCS 398 and STAT 398.

STAT 399 - Doctoral Directed Research (0-12)

Doctoral level supervised research.

WE - Winter Enrichment

WE 100 - WE Courses (0)

The Winter Enrichment Program (WEP) takes place in January each year and is designed to broaden students' horizon. WEP is an essential and core requirement of the degree programs at KAUST. Satisfactory completion of at least one WEP is required of all M.Sc. students as part of the completion of the degree requirements. Ph.D. students who did not receive their M.Sc. degree at KAUST are also required to satisfactorily complete at least one WEP. To satisfy this mandatory requirement, full participation must occur within a single WEP period.
